**IKO Linear Motion Rolling Guide Series
General Catalog****BLUE****IKO Linear Motion Rolling Guide Series General Catalog BLUE**

Eco-friendly and Excellent Quality

IKO Linear Motion Rolling Guides are used with satisfactory results for various applications requiring precision positioning such as semi-conductor manufacturing equipment, large sized machine tools, industrial robots, and precision equipment. In contrast to conventional rolling bearings used in rotating parts, Linear Motion Rolling Guides are the products applicable to plane sliding surfaces, and meet the increasing needs for linear motion and precision positioning in machines and equipment. Linear Way and Linear Roller Way of rail guide type, Linear Ball Spline of shaft guide type, and other products, recognized for their high quality and excellent features, are available.

- IKO Linear Motion Rolling Guides are produced at a quality level approved by ISO-14001 and ISO-9001 using a production system that reduces negative impact on the global environment.
- The standard products listed in this catalog comply with the specifications of the six hazardous materials mentioned cited in the European RoHS Directive. For information on all other products, please check with IKO.
- This catalog adopts the SI system (system of international units) in conformance with ISO (International Organization for Standardization) Standard 1000.

Linear Way Linear Roller Way

	Ball Type Miniature Series Super small-size linear motion rolling guide produced by original small sizing technology
	Ball Type Compact Series Versatile linear motion rolling guide pursuing compactness in every aspect just like lower, narrower, and shorter
	Ball Type High Rigidity Series High rigidity linear motion rolling guide having a maximum load rating among ball-type units by incorporating a large-diameter ball
	Ball Type Wide Rail Type Series Linear motion rolling guide suitable to single-row use due to having resistance to across-the-width moment load by using a wide track rail
	Ball Type U-Shaped Track Rail Series Linear motion rolling guide of high track rail rigidity with U-shaped track rail
	Roller Type Linear motion rolling guide that has achieved the highest level of performance in all characteristics utilizing the roller's superior characteristic
	Roller Type Roller type linear motion rolling guide with cylindrical rollers in four-rows
	Module Type Minimum compact linear motion rolling guide with both a track rail and slide member provided

Crossed Roller Way Linear Slide Unit Linear Ball Spline Linear Bushing Stroke Rotary Bushing Roller Way & Flat Roller Cage

	Crossed Roller Way Linear motion rolling guide incorporating a roller cage between two ways whose two V-shaped surfaces are used as track groove
	Linear Slide Unit Light weight, small, and compact linear motion rolling guide that has achieved light and smooth motion
	Linear Ball Spline Linear motion rolling guide performing linear motion while performing torque transmission along the spline shaft by external cylinder or slide unit
	Linear Bushing A wide variety of linear motion rolling guides facilitating the rolling motion in bush guide portion
	Stroke Rotary Bushing Linear motion rolling guide enabling the rolling motion and rotary and linear motion in axial direction
	Roller Way & Flat Roller Cage High accuracy linear motion rolling guide providing high rigidity in load direction

IKO Types and Specifications of

Linear Motion Rolling Guide Series

Types of Linear Motion Rolling Guides

Specifications of Linear Motion Rolling Guides

Types of Linear Motion Rolling Guides	Endless linear motion	Limited linear motion
Rail Guide Type The rail guide type achieves linear motion along a rail. This product can receive a complex load and features high performance, excellent total balance and easy handling.	Linear Way 	Crossed Roller Way 
	Linear Roller Way 	Linear Slide Unit 
	Linear Ball Spline 	Stroke Ball Spline 
	Linear Bushing 	Limited linear motion + rotation Stroke Rotary Bushing 
Shaft Guide Type The shaft guide type achieves linear motion along a shaft. This product is easy to handle and suitable for relatively low load conditions. Some shaft guide products can achieve both rotation and reciprocating linear motion.	Linear Ball Spline 	Stroke Ball Spline 
	Linear Bushing 	Limited linear motion + rotation Stroke Rotary Bushing 
Flat Guide Type The flat guide type achieves linear motion on a surface. This product can receive only a unidirectional load but feature high rigidity in the load direction.	Roller Way 	Flat Roller Cage 
	Roller Way 	Flat Roller Cage

Environment

IKO Gentle to The Earth

Nippon Thompson Co., Ltd. is working to develop global environment-friendly products.

It is committed to developing products that make its customer's machinery and equipment more reliable, thereby contributing to preserving the global environment. This development stance manifests well in the keyword "Oil Minimum".

Our pursuit of Oil Minimum has led to the creation of IKO's proprietary family of lubricating parts as "C-Lube".

"C-Lube" minimizes usage of lubrication oil and supplies the optimal amount of lubrication oil for long period of time. So it realizes long term maintenance free and contributes to the global environment preservation.

The "Interchangeable" is a result of our consideration to the environment and radical pursuit of elimination of material and inventory waste.

Interchangeable is a collective name of "systems of products selection from users' perspective" which allows free interchange and replacement totally retaining the accuracy and preload of slide units and track rails.

The integration of maintenance free and advanced interchangeable system with C-Lube is the "Free & Interchangeable".

Eco-friendly specification

Reducing usage of lubrication oil

Eco-friendly

Consumption of precious oil resource is minimized! And elimination of oil feeder and its piping reduces the initial cost!

Contributes to reduction of total cost and environmental loads!!

Oil usage reduction effect

Maintenance free

Endures running over 20,000 km without oil feeding!

Troublesome lubrication maintenance process is reduced!!

Distance equivalent to halfway around the globe

Compactness

The space consuming oil feeder is eliminated to save the space!

Freedom of machine designing is expanded for user!!

Efficient use of space

Features of C-Lube Linear Way and C-Lube Linear Roller Way

Original and world's first structure with [C-Lube]

C-Lube integrated

Lubrication oil is carried through circulation of rolling elements

The lubrication oil is supplied directly to the rolling elements, not to the track rail. When rolling elements make contact with the capillary lubricating element integrated with the circulation path of slide unit rolling elements, the lubrication oil is supplied to surfaces of rolling elements and carried to the loading area through circulation of rolling elements. This results in adequate lubrication oil being properly maintained in the loading area and lubrication performance will last for a long time.

Lubrication oil is directly supplied to surfaces of the rolling elements

The surface of capillary lubricating element is always covered with the lubrication oil. Lubrication oil is continuously supplied to the surface of rolling elements by surface tension in the contact of capillary lubricating element surface and rolling elements. On the surface of capillary lubricating element with which the rolling elements make contact, new lubrication oil is always supplied from the other sections.

long term maintenance free is realized with oil impregnated with C-Lube only !!

Maintenance free

This endures running over 20,000 km without oil feeding with lubrication oil in the C-Lube only. Furthermore, grease is pre-packed in the slide unit so long term maintenance free can be realized.

Maintenance free is achieved until the end of device life!

*1. Typical device life is assumed. Re-greasing may be necessary depending on use conditions.

Durability test result

Eco-friendly

As lubrication oil in C-Lube is supplied by the amount necessary to maintain lubrication performance of the rolling guide, the consumption of lubrication oil is reduced and lubrication performance is maintained even when it run for a long period.

Eco-friendly specification reducing usage of lubrication oil!

Oil supply test result

Compact

As C-Lube Linear Way and C-Lube Linear Roller Way are integrated with lubrication part C-Lube, their slide units are not long unlike types with external lubrication parts. Replacement of conventional parts is easy free from constraints of mounting space and stroke length.

Compact design taking into account compactness!

Smooth

C-Lube Linear Way and C-Lube Linear Roller Way do not generate slide resistance unlike lubrication parts external to the slide unit that make contact with the track rail. Driving force follow-up property is superior and energy is saved by improvement of accuracy and reduction of friction loss.

Light and smooth motion is achieved!

Frictional resistance test result

Ultimate **Interchangeable** pursuit of elimination

system by radical of any waste

Accuracy interchangeability

Three accuracy classes are available!
Height variation can be controlled with multiple assembled sets!

High accuracy of the device can be maintained in the multiple-use environment!!

Unit interchangeability

Many type of slide units are available!
Every slide unit is interchangeable with the same track rail!

It is easily added or replaced!!

Short delivery products

Separate delivery of slide unit and track rail!

You may order what you need by any quantity at any time!!

Q I dropped the linear way unit by mistake, and the unit is damaged. Can I replace it?

A **Unit interchangeability**
If you use Linear way of Interchangeable specification, you may need to replace only slide unit.

Q Calculated accuracy cannot be achieved after assembly of the device?

A **Accuracy interchangeability, preload interchangeability**
How do you like to use accuracy higher by one class or higher preload type?
As accuracy of the interchangeable products is controlled strictly by parts, setting can be modified.

Q I need to increase the rigidity of the unit because of sudden specification change.

A **Unit interchangeability**
The rigidity can be improved easily by increasing the unit length.

Q I carelessly forgot to arrange some parts, but I need them urgently. Can it be delivered soon?

A **Short delivery available**
Interchangeable parts are available for short delivery, they can be delivered quickly with our perfect inventory system.
Slide unit and track rail can be ordered individually.

Free combination is enabled for model, accuracy, preload!!

Ultimate interchangeable system

Interchangeable specification

Requirements of ;

- Wish to improve the rigidity and life of machines
- Wish to improve the accuracy of machines
- Wish to replace the slide unit immediately
- The number of slide units is in short
- Wish to replace the track rail immediately
- The length of track rail is not sufficient
- Wish to store only the slide units in stock for emergency

Interchangeable specification realizes ;

- Wish to prepare for a sudden design change
- Wish to select freely the combination of high accuracy and preload
- Slide unit and track rail are separately handled
- Free combination of slide unit and track rail can be selected
- Compactness-independent storing of slide units and track rails

Select the products as many as you wish.

Unit interchangeability

A wide variety of slide unit models with different sectional shape and length are provided, for free replacement on the same track rail.

Interchangeability of slide unit

Slide unit shape

Length of slide unit

Free selection is possible for slide units and track rails!

Interchangeable specification has realized the incomparable high interchangeability by severely managing the dimensions of slide unit and track rail with the background of unique high processing technology.

This feature allows independent handling of slide unit and track rail, thus allowing you to select free combination and to order any products for any volume at any necessary time.

Accuracy interchangeability

Three accuracy classes of Ordinary, High and Precision class are provided, to support even high traveling accuracy purposes. In addition, as height variation of multiple assembled sets is managed with high accuracy, you may use parallel track rails at ease.

Standard setting up to precision

- Tolerances of dimensions H and N
- Variation of dimensions H and N in 1 set
- Parallelism in operation of the C surface to A surface
- Parallelism in operation of the D surface to B surface

It allows the accuracy improvement of units without design changes!

Corresponding to parallel arrangement of multiple assembled sets as standard

- Variation of dimensions H of multiple assembled sets is specified

Preload interchangeability

The high accuracy dimensions management utilizing the simple structure achieved the interchangeability of preloaded slide units. It supports the applications requiring the rigidity of one higher rank.

High preload setting is possible thanks to high accuracy dimensions control

It allows the rigidity improvement of units without design changes!

Maintenance free is achieved only by replacing the slide unit!

By replacing the interchangeable linear way or linear roller way slide unit with C-Lube Linear Way or C-Lube Linear Roller Way slide unit, maintenance free is achieved while using the same track rail.

IKEO's excellent features realized by contact in two-row raceways

a simple structure by **four-points**

Two-row four-point contact type simple structure

IKEO adopts two-row four-point contact type for every Linear Way series. Thanks to our design know how and production technologies having been fostered for long time, high accuracy and smooth motion is realized in the micro series.

In addition, load in every direction can be received evenly and therefore stable high accuracy and rigidity can be achieved even in applications where load has variable direction and size or complex load is applied.

Essential for micro sizing!

Micro Linear Way L realized by simple structure

Micro linear way L for further needs of miniaturization produced by original small sizing technology. Wide variety of track rail width from 1 mm to 6 mm is available and high accuracy of micro positioning mechanism is realized.

World's smallest size!

- High accuracy even with the smallest size of 1 mm*!
*Track rail width of 1 mm
- Even the smallest size of 1 mm can be securely mounted and fixed**!
**Tapped rail specification
- Even the smallest size of 1 mm can ensure stable operation!

IKEO Micro Linear Way L

LWL1

LWL1 can be used for further super miniaturization of machines and devices with free-minded thinking.

Interchangeable

The simple structure of four-contact in two-row raceway yields small manufacturing errors or accuracy measurement errors, allowing the maintenance of each raceway in the high dimensions accuracy.

This technology realizes interchangeable specification and high interchangeable system in every series!

As the ball is stabilized during track groove measurement, measurement of high accuracy and precise pre-load management are possible.

Variety of models and size variations

A wide variety of models and sizes, such as super miniature size of only 1 mm track rail width, is provided for your selection to meet each requirement.

Series	Model	Size	Track rail width	
			Min	Max
C-Lube Linear Way ML	ML	7 models	14 sizes	5 ~ 42 mm
	LWL	20 models	18 sizes	1 ~ 42 mm
C-Lube Linear Way ME	ME	18 models	6 sizes	15 ~ 45 mm
	LWE	21 models	6 sizes	15 ~ 45 mm
C-Lube Linear Way MH	MH	19 models	9 sizes	8 ~ 45 mm
	LWH	25 models	12 sizes	8 ~ 85 mm
Linear Way F	LWF	4 models	7 sizes	33 ~ 90 mm
C-Lube Linear Way MUL	MUL	1 models	2 sizes	25 ~ 30 mm
	LWU	3 models	8 sizes	25 ~ 130 mm

Ultimate high performance produced by world's

first roller guide structure of IKO

Super high load capacity

The Linear Roller Way Super X has a large contact area with the way and a number of cylindrical roller with excellent load capacity, which allows to achieve larger load rating.

Comparison of basic dynamic load rating

Comparison of basic static load rating

Size smaller by one size than the ball type can be used!

Long life

《Roller Type》MXG45

$C = 124\,000\text{ N}$
 $C_0 = 223\,000\text{ N}$

《Ball Type》MHG45

$C = 95\,200\text{ N}$
 $C_0 = 114\,000\text{ N}$

Same size

C : Basic dynamic load rating N
 C_0 : Basic static load rating N
 L : Life km
 P : Applied load N

Roller type has large basic dynamic load rating C and long life due to the different "index"!

[Life calculation example]

Roller Type

$$L = 50 \left(\frac{C}{P} \right)^{10/3}$$

Applied load
In case of 10000 N

$$L \approx 220\,000\text{ km}$$

Ball type

$$L = 50 \left(\frac{C}{P} \right)^3$$

$$L \approx 43\,000\text{ km}$$

Significant increase!

Super high rigidity

The rigidity of linear motion rolling guide significantly affects properties of machines and devices to be incorporated.

The Linear Roller Way Super X achieves high rigidity as a number of small cylindrical rollers with smaller elastic deformation relative to load than that of balls are incorporated in the slide unit.

Comparison of elastic deformation

Well-balanced high rigidity is realized in every direction!

Vibration characteristics

The Linear Roller Way Super X has high rigidity relative to ball types of the same size, so deformation amount is low relative to repeated fluctuating load, natural frequency is high and vibration damping time is short.

Vibration damping curve in downward vibration (Half amplitude)

Positioning time can be shortened!

Allows accurate positioning with excellent frictional characteristic

The Linear Roller Way Super X prevents skew of cylindrical roller and achieves smooth motion by adopting unique retaining method to accurately guide cylindrical roller ends with retaining plate.

The Linear Roller Way Super X has good response characteristics to micro-feeding and allows for accurate positioning, thanks to small frictional resistance against preload and load and excellent frictional characteristics relative to plain guides and ball type linear motion rolling guide.

MXDL25 and MXDG45 T₃ preload frictional resistance

Test portion	Extra long unit MXDL25 Long unit MXDG45
Preload	T ₃ preload
Velocity	0.6 m/min
Lubrication	C-Lube integrated, with grease

High follow-up property is ensured even for micro-feeding!

High running accuracy

Optimal design based on analysis of re-circulation behavior of cylindrical roller circulation realizes smooth and quiet motion. In addition, load is applied to many cylindrical rollers and therefore the micro deflection during running is minimized. Extra long unit is optimal for applications requiring higher running accuracy. (For details, see page I -29)

Deflection amount during running

unit: μm

MXDG30 T ₃ preload	0.12
Competitor's super high accuracy long type	0.12

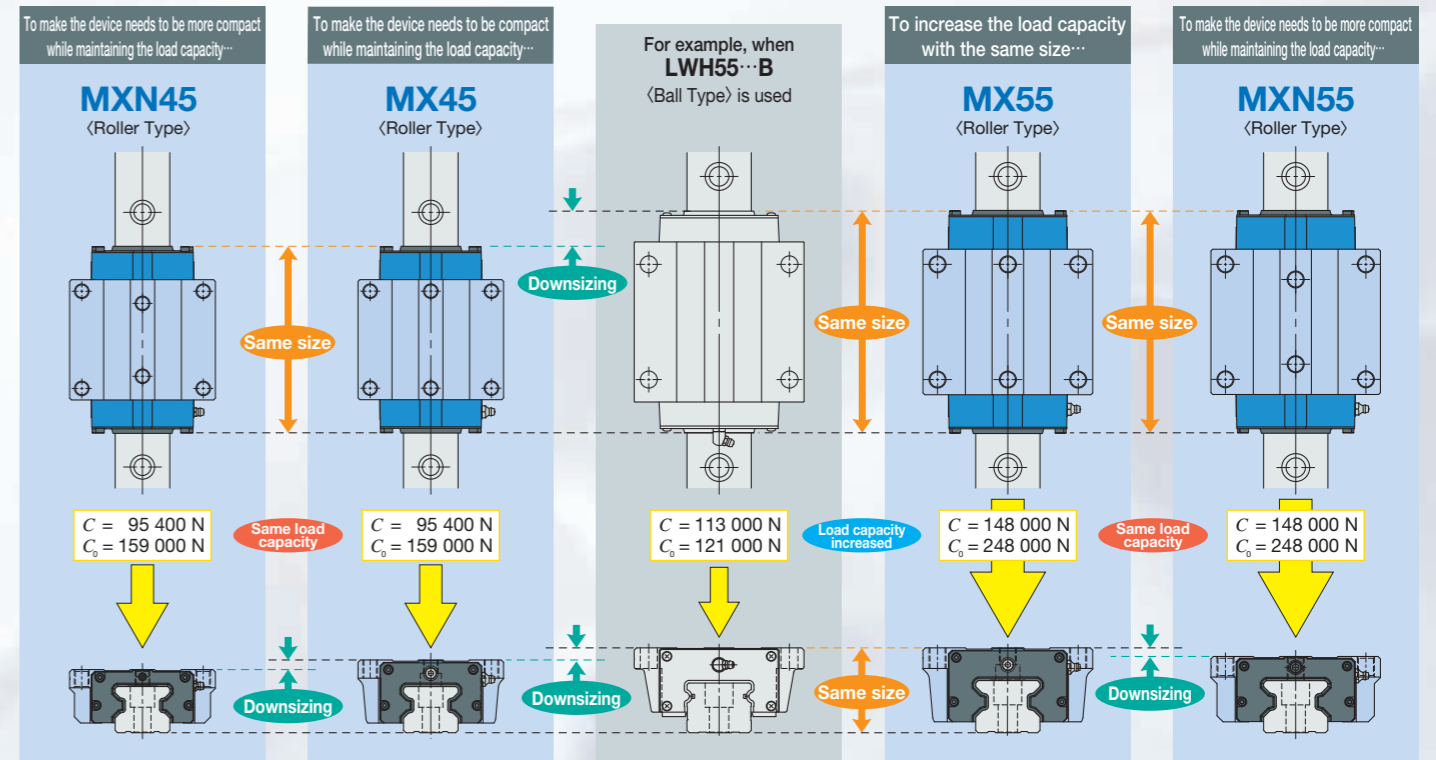

Stable running accuracy is achieved!

MXDG30 is equivalent to competitor's super high accuracy long type

Corresponding to compactification

Roller type with significantly higher load capacity than the ball type. The Linear Roller Way Super X allows for downsizing from many size variations for compactification of devices.

Downsizing and increased load capacity!

Roller type with large increase of load capacity!

Compatible ball type and mounting dimensions

The Linear Roller Way Super X has mounting dimensions compatible with the ball type Linear Way H. Replacement with roller type is possible without significant design change to machine or device.

«Roller Type» C-Lube Linear Roller Way Super MX
«Ball type» C-Lube Linear Way MH

Downsizing and increased load capacity are possible!

A variety of models and size variations

Ball Type Miniature Series

C-Lube Linear Way ML Linear Way L

Thanks to the structure with two rows of balls to contact with the way at four points, stable accuracy and rigidity can be achieved even in applications where load has variable direction and size or complex load is applied, despite its very small body.

Length of slide unit		Size	
C	Short	Standard type	1, 2, 3, 5, 7, 9, 12, 15, 20, 25
No symbol	Standard	Wide type	4, 6, 10, 14, 18, 24, 30, 42
G	Long

- Excellent frictional characteristics**

Stainless steel made

LRXD10...SL

Features of extra long unit

C-Lube Linear Roller Way Super MX

Length of slide unit is **1.4 to 1.5 times longer** than that of standard unit

C-Lube Linear Way MH

Length of slide unit is **1.6 times longer** than that of standard unit

Super accurate feeding mechanism is realized

As running accuracy is as low as a half of that of long unit, feeding mechanism with super high accuracy can be realized.

Test conditions

Test portion	Extra long unit
Preload	T ₃ preload

Test conditions

Test portion	Long unit
Preload	T ₃ preload

High accuracy running performance is realized without major change of machine or device design⁽¹⁾!

Note (1) Position of the slide unit mounting hole is changed.

Further improvement of running accuracy

Load capacity and rigidity are significantly improved!!

Load capacity of machine or device is improved

As its basic dynamic load rating and basic static load rating are larger than those of Long type by 122% and 129%, respectively, life and margin safety of machine or device are improved.

Comparison of basic dynamic load rating

Increased to **158%** relative to standard unit!
Increased to **122%** relative to long unit!

Comparison of basic static load rating

Increased to **181%** relative to standard unit!
Increased to **129%** relative to long unit!

Contributing to improvement of machine or device rigidity

Elastic deformation relative to load is small in comparison with long unit, device rigidity is improved, accuracy is improved, and resonance can be avoided.

Comparison of elastic deformation under downward load

Rigidity increased to **155%** relative to standard unit!
Rigidity increased to **117%** relative to long unit!

Comparison of elastic deformation under upward load

Rigidity increased to **152%** relative to standard unit!
Rigidity increased to **113%** relative to long unit!

IKO's unique ideas and experiences are utilized to explore new world for special environment applications.

IKO Linear Way and Linear Roller Way are available for various special environment by using different materials and grease, surface treatment and dust protection measures, etc. Typical application fields and major countermeasures are described below.

Clean Environment

When the Linear Way or Linear Roller Way is used in clean environment such as a clean room, it is required that the environment is not polluted by dust-generation by the Linear Way or Linear Roller Way and it must have excellent rust prevention property as rust prevention oil cannot be used.

Vacuum Environment

When the Linear Way or Linear Roller Way is used in vacuum environment, it is required that the gas discharged from the Linear Way or Linear Roller Way does not pollute the environment or reduce the degree of vacuum, and it must have excellent rust prevention property as rust prevention oil cannot be used.

Heat Resistance Measures

When the Linear Way is used in an environment where temperature is higher than usual, heat resistance of synthetic resin components and metal parts will be an issue.

Dust Protection

If dust such as metal or wooden chips get into the way of the Linear Way or Linear Roller Way, reduction of life and accuracy may be caused. Therefore, measures to prevent foreign substances from entering into the way are necessary.

Spatter Protection

Spatter of welding, etc. is so hot that it adheres to components. Foreign substances adhering to the track rail firmly cannot be fully removed by normal dust protection measures, so measures to avoid adherence and enhanced foreign substances removal measures are necessary.

are utilized to explore new world for

Vacuum Environment Linear Roller Way Super X

When a linear motion rolling guide is used in vacuum environment, generation of outgas from resin parts such as end plates will be an issue if standard products are still used. In addition, the specification must be applicable to high temperature environment during baking. As roller type linear motion rolling guide has a precise roller circulation structure, it has not been compatible with stainless steel end plate widely used in ball type linear motion rolling guides for special environment applications.

The newly developed Vacuum Environment Linear Roller Way Super X is a roller type linear motion rolling guide realizing excellent outgas reduction property by combining corrosion-resistant stainless steel casing and resin parts such as super engineering plastic (PEEK resin) end plate to resolve these issues. Excellent properties of roller type such as high load capacity, high rigidity and smooth sliding characteristic with low frictional resistance can be ensured even under vacuum environment.

Features

Newly developed!
Roller type linear motion guide available under vacuum environment!

1 Corresponding to low to high vacuum area (degree of vacuum 10^{-3} [Pa])!

2 Excellent outgas reduction property!

3 Baking temperature can be up to 200°C!

- Temperature in still condition.
- If baking temperature exceeds 150°C, multiply the basic load rating by the temperature factor.

4 Excellent corrosion resistance!

- Corrosion-resistant stainless steel is used in all steel made parts.

Selection of lubricant

Though fluorine grease is recommended for lubricant, carefully select grease since vapor pressure and temperature of base oil are correlated as vapor pressure goes up along with increase of the temperature. For details, see chosen grease manufacturer's catalog.

Relationship example between fluorine grease vapor pressure and temperature

End plate	Super engineering plastic (PEEK resin)

Hybrid Lubrication Linear Way L

In clean environment, vacuum or high temperature environment of semiconductor producer and LCD producer, etc, pollution by outgas and particles is extremely not welcome. Therefore, solid lubrication film has been used as lubricant.

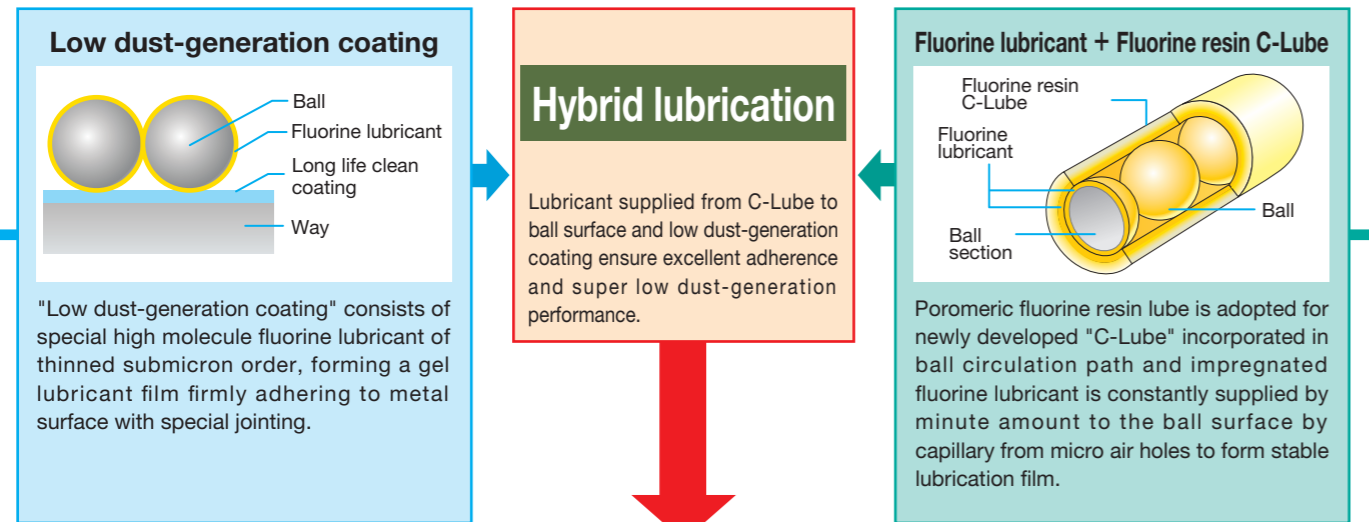

IKO developed "Hybrid Lubrication Linear Way" with dust-generation life and load resistance substantially higher than conventional solid lubrication film.

Optimal for applications where general grease or oil cannot be used, such as vacuum environment.

What is hybrid lubrication

IKO Hybrid system of IKO's landmark lubrication system "C-Lube" and newly developed "Low dust-generation coating" achieves low dust generating performance, outgas reduction property, long life and excellent load resistance of Linear Way.

Features

Clean
(Low dust-generation)

JIS cleanliness class 4 compliant
(Up to 352 particles of diameter 0.5 μm/m³)

Vacuum

Corresponding to low to high vacuum environment

High temperature property

~200°C* (fluorine lubricant and fluorine resin C-Lube are adopted) compliant

Load resistance

Load resistance more than double of general clean coating

* For continuous operation, up to 150°C.

Performance

Class 4 low dust generating performance

Dust-generation property

Test conditions Model : ML9 equivalent load: 80N stroke: 500 mm

Life 10 times longer than general clean coating is achieved

Dust-generation life comparison

Excellent outgas reduction property

Outgas reduction property

Outgassing property of Hybrid Lubrication Linear Way

Measuring condition Model : ML9 Degree of vacuum: 10⁻⁵ Pa Temperature: 100°C, 200°C

Life **10 times** longer than general clean coating is achieved

● Applicable products

Series	C-Lube Linear Way ML
Main model code	ML7, 9, 12, 15

■ Standard specification

Casing	Martensitic stainless steel	This is made-to-order. If needed, please contact IKO. In addition, we also offer non-magnetic stainless steel specification. Please ask us for your request.
Track rail	Martensitic stainless steel	
Ball	Martensitic stainless steel	
End plate	Stainless steel	
C-Lube	Poromeric fluorinated resin	

● Precaution for Use

- Although heat resistant fluorinated lubricant and parts are used, operating temperature shall be 200°C at the maximum or up to 150°C for continuous operation.
- The unit must be stored in a dry and clean place and unpacked in the same environment right before use. In addition, do not touch the product directly by bare hand.
- Hybrid Lubrication Linear Way is packed in clean condition and therefore cleaning is not necessary. In addition, do not wipe off the coating film on the raceway as it may affect lubrication and dust-generation properties.

Hybrid C-Lube Linear Way ML

ML.../HB

While maintenance free performance of C-Lube Linear Way ML is maintained, the silicon nitride ceramics ball improves high-speed performance and reduces noise level. Ceramics has more resistance to deformation and more rigidity than bearing steel and stainless steel.

Standard specification	
Casing	Martensitic stainless steel
Track rail	Martensitic stainless steel
Ball	Silicon nitride ceramics
C-Lube	Capillary lubricating element (Porous resin)

Features

- 1 Superior high-speed performance** ... More than three times durability
- 2 Noise reduction** ... Noise reduction by about 4.5 dB
- 3 High rigidity** ... Displacement volume reduced by about 10%
- 4 Superior abrasion resistance** ... Preload reduction volume is about one fourth

※ All of the above based on comparison with our C-Lube Linear Way ML

Maintenance free
Achieved long term maintenance free

Eco-friendly
Minimized lubrication oil consumption

Compact
Integral lubrication parts

Smooth
Excellent sliding characteristic

Non-Magnetic Hard Alloy Linear Way L

Non-magnetic hard alloy Linear Way L is a linear motion rolling guide that realizes relative magnetic permeability lower than 1.001 and relative magnetic permeability lower than one tenth of that of conventional non-magnetic stainless steel products. Further, durability more than three times as higher as that of non-magnetic stainless steel products is realized.

Non-magnetic hard alloy Linear Way L is a non-magnetic linear motion rolling guide optimal to avoid effects of magnetic force in magnetic field environment.

Relative magnetic permeability
Below 1.001

Features

Relative magnetic permeability lower than 1.001

Relative magnetic permeability lower than one tenth of that of non-magnetic stainless steel products

More than three times durability

More than three times durability with hardness 1.5 times as much as that of non-magnetic stainless steel products

High corrosion resistance

Optimal for use in clean environment thanks to corrosion-resistant alloy

Easy handling

Casing and track rail have excellent ductility and coefficient of linear expansion similar to general metals as they are made of metal

Non-magnetic hard alloy characteristics

Material name	Non-magnetic hard alloy	Silicon nitride ceramics	Non-magnetic stainless steel
Characteristics			
Relative magnetic ⁽¹⁾ permeability	1.001 or less	1 (0.999991)	1.01 or less (1.005)
Electric conductivity	○	×	○
Hardness (HV)	610 ~ 700	1400 ~ 1600	380 ~ 450
Linear expansion coefficient (×10 ⁻⁶ /°C)	11.5 (30 ~ 200°C)	3.2 (20 ~ 400°C)	19.0 (20 ~ 400°C)
Specific gravity (g/cm)	7.7	3.2	7.9
Main component	Ni, Cr	Si ₃ N ₄	Fe, Mn, Cr
Cost	○	△	○
Remark	Good corrosion resistance	Good corrosion resistance	—

Note (1) () is only an example of the measurement value.

Selection of lubricant

By selecting appropriate lubricant such as vacuum grease and low dust-generating grease, this may be corresponding to any operating environment.

● Applicable products

Series	Linear Way L
Main model	LWL5...B ~ LWL15...B

Remark: No ball retaining band is included.

■ Main component materials

Casing	Non-magnetic hard alloy
Track rail	Non-magnetic hard alloy
Ball	Silicon nitride ceramics
End plate	Non-magnetic alloy steel

Stainless Linear Way and Linear Roller Way

A variety of stainless steel series

IKO Linear Way and Linear Roller Way lineup includes products with stainless steel made parts instead of steel parts. As stainless steel is resistant to rust relative to high carbon steel made products, they are optimal for use in applications where oil content and rust prevention oil are not preferred. It is also suitable for use in cleanroom environment room, so use clean grease that inhibits dust-generation amount together.

Main component materials	
Casing	Martensitic stainless steel
Track rail	Martensitic stainless steel

Combination with special specification corresponds to use in special environment!

Rust prevention

Black chrome surface treatment /L

Black chrome surface treatment on the track rail and slide unit improves rust prevention capacity.

Fluorine black chrome surface treatment /LF

Coating of fluorinated resin is applied over the black chrome surface treatment to prevent foreign substances from sticking and improve the rust prevention capacity.

Black chrome surface treatment

Features

- Thin film
- Uniform film
- Strong adhesion
- Excellent rust prevention capacity
- Low temperature processing to prevent distortion
- No peeling and no effects on life and cleanroom environment

Corrosion resistance comparison based on humidity cabinet test

Test conditions Temperature 50°C, Relative humidity 95%RH

Special specification for special environment

IKO Linear Way and Linear Roller Way lineup includes following special specifications to correspond to various special environments.

Dust protection

C-Wiper /RC

Mounted to the outside of end seal, it may be used for long time even under environment where metal chips are spattering. End seal, inner seal (/UR) and scraper (/Z) may be equipped as standard when you specify special specification /RC with C-Wiper.

If you need inner seal only, specify /UR.

Applicable C-Wiper size

Dust protection

Rail cover sheet

Rail cover sheet that consists of steel plate and adhesive tape and fastened to the dedicated track rail with groove on the track rail prevents foreign substances from entering into the slide unit.

Caps for rail mounting holes /F

Caps for rail mounting holes close the track rail mounting holes to prevent foreign substances from entering into the slide unit. Aluminum caps for rail mounting holes are also available. Ask  for your request.

Dust protection

Double end seals /V

Double end seals improve the dust protection property further.

Scraper /Z

Mounted to the outside of end seal, it may remove large foreign substances adhering to the track rail.

Rail cover plate /PS

Rail cover plate totally covers the upper surface of the track rail to prevent foreign substances from entering into the track rail.

Track rail mounting from bottom

This is the specification that track rail is fixed from the mounting surface side. As there are no mounting holes on the track rail upper surface, adherence with the seal is superior and better dust protection effect is achieved.

Female threads for bellows /J

Female threads for bellows are prepared on the slide unit and track rail ends.

Specific bellows

Dust protection cover over the exposed part of the track rail.

Special specification for special environment

Lubrication

With C-Lube plate /Q

Lubrication parts to substantially reduce the need for lubrication management, i.e. grease job.

Low Dust-Generation Grease for Clean Environment CGL /YCL

For this grease, mixed soap is used as thickener and synthetic oil and low pour point mineral oil are mixed with base oil, so it has excellent low dust generating performance, rolling resistance, lubrication, and rust prevention property.

Bellows cartridge (80 g)

JG80 /CGL

With miniature greaser (2.5 ml)

MG2.5 /CGL

Low Dust-Generation Grease for Clean Environment CG2 /YCG

For this grease, urea is used as thickener and synthetic oil is used as base oil, so it has excellent low dust generating performance, operating temperature range, lubrication property, rust prevention property and oxidation stability.

Bellows cartridge (80 g)

JG80 /CG2

With miniature greaser (2.5 ml)

MG2.5 /CG2

MG10 /CG2 with 10 ml are also available.

Anti-Fretting Corrosion Grease AF2 /YAF

Grease with excellent fretting-proof corrosion property.

Bellows cartridge (80 g)

JG80 /AF2

With miniature greaser (2.5 ml)

MG2.5 /AF2

Other special grease

If you need any special grease for vacuum or high temperature, ask for IKO your request.

Others

Stainless steel end plate /BS

End plate is changed to stainless steel.

Special environment seal /RE

The end and under seals are replaced with end seals for special environment that can be used at high temperatures. When it is used in high temperature environment, stainless steel end plate (/BS) and high temperature grease should be combined.

The photo shows a combination of special environment seal (/RE) and stainless steel end plate (/BS).

IKO can offer products for special environment!

If needed, ask **IKO** for your request.

Points

Extremely small size realized by simple structure

For details P.I-19

Super small-size linear motion rolling guide produced by two-row four-point contact simple structure and original small sizing technology. The track rail width of LWL1, the smallest size, is only 1mm.

Wide range of variations for your needs

For details P.I-25

The slide unit shape can be selected from two types, the standard type and the wide type suited for single-row track rail uses, and there are four types with different lengths of slide unit with same section. Furthermore, the track rail has the variation of standard type and tapped rail type with the screw thread implanted, allowing you to select an optimal product for the specifications of your machine and device.

Ball retained type for easy operation

The slide unit of ball retained type incorporates the ball retaining band, which prevents the ball from dropping down when the slide unit is removed from the track rail. This safety structure brings you an easy operation to the machines / equipment.

Stainless steel selections for excellent corrosion resistance

For details P.I-41

Stainless steel highly corrosion-resistant is used as the basic specification, so that the products are suitable for applications where rust prevention oil is not preferred, such as in cleanroom environment. High carbon steel products suited to general purposes are also provided.

Widely supports special environment uses

For details P.I-31

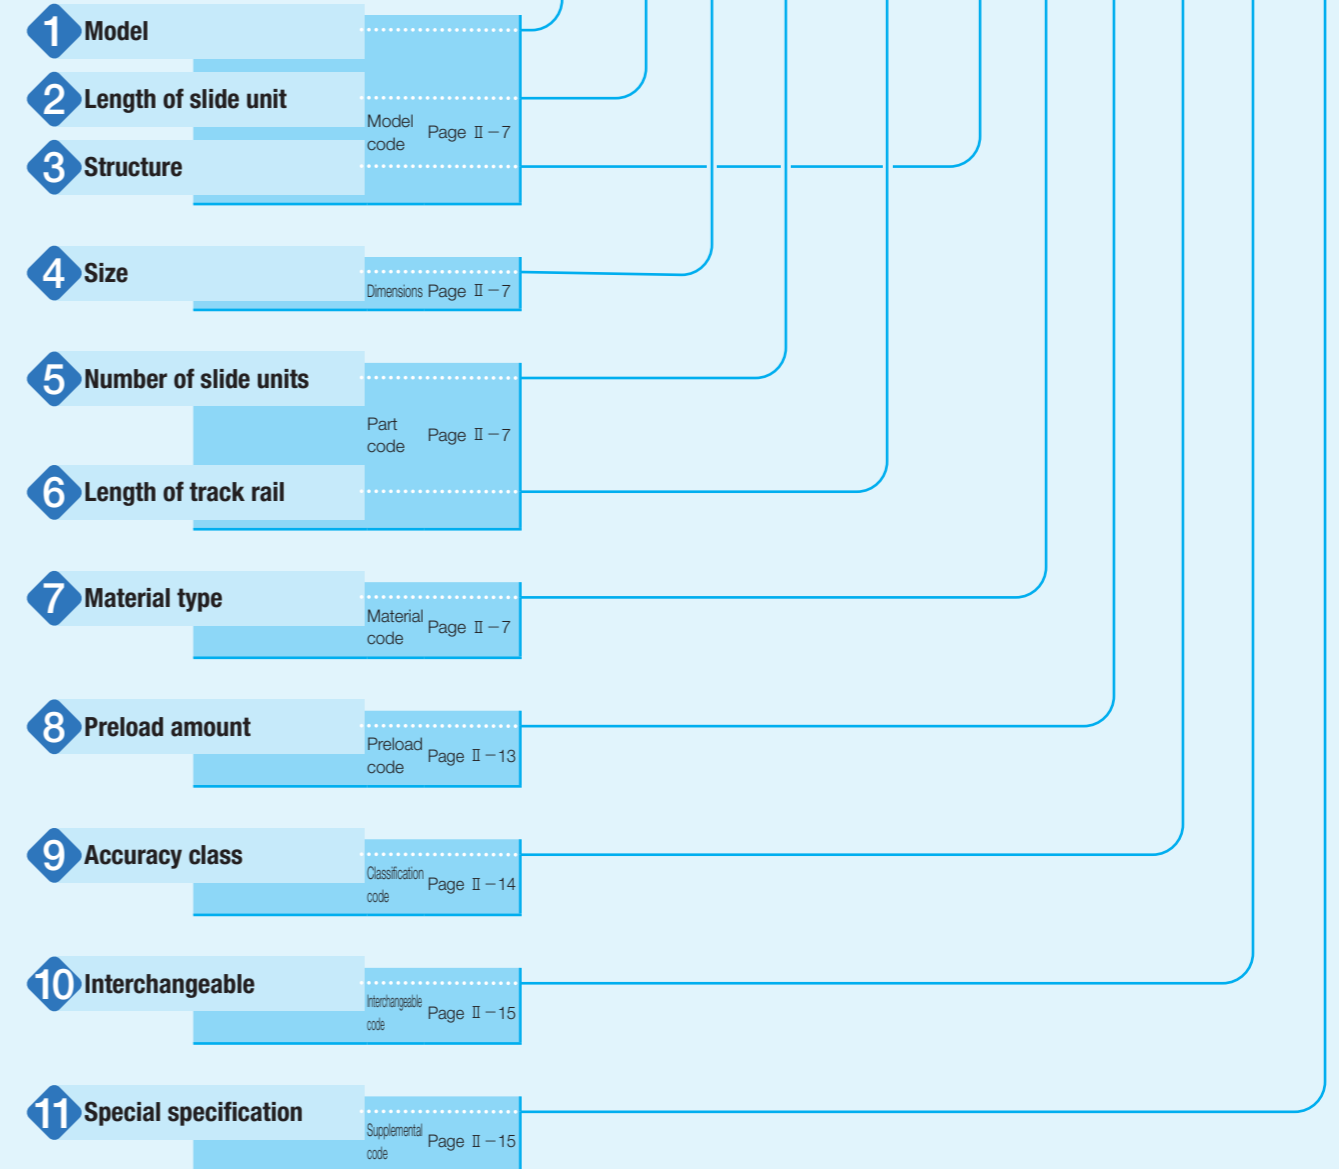

C-Lube Linear Way L for special environment uses are provided as a series. Increasingly varied special environment uses are supported, such as by high-speed / low-noise specifications by combining silicon nitride ceramics and low dust-generation specifications.

Identification Number and Specification

Example of an identification number

The specifications of ML(F) and LWL(F) series are indicated by the identification number. Indicate the identification number, consisting of a model code, dimensions, a part code, a material code, a preload symbol, a classification symbol, an interchangeable code, and a supplemental code for each specification to apply.

	1	2	4	5	6	3	7	8	9	10	11
Interchangeable specification											
Single slide unit	ML	C	12	C1				T ₁	P	S1	/U
Single track rail (1)	LWL		12		R200	B			P	S1	
Assembled set	ML	C	12	C1	R200			T ₁	P	S1	/U
Non-interchangeable specification											
Assembled set	ML	C	12	C1	R200	B		T ₁	P		/U

Note (1) Indicate "LWL...B" or "LWLF...B" for the model code of the single track rail regardless of the series and the combination of slide unit models.

1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

1 Model

C-Lube Linear Way ML (ML(F) series) Standard type : ML
Wide type : MLF

Linear way L ⁽¹⁾ (LWL (F) series) Standard type : LWL
Wide type : LWLF

For applicable models and sizes, see Table 2.1 and Table 2.2.
Indicate "LWL...B" or "LWLF...B" for the model code of the single track rail regardless of the series and the combination of slide unit models.

Note ⁽¹⁾ This model has no built-in C-Lube.

2 Length of slide unit

Short : C For applicable models and sizes, see Table 2.1 and Table 2.2.
Standard : No symbol
Long : G
Extra long : L

3 Structure

Table 1.1 Structure of ML and LWL

Model	Types and sizes of track rails	Structure
ML	Standard rail specification	Ball retained type : No symbol
	Standard rail specification	Ball retained type : B
LWL	Tapped rail specification Mounting from bottom Size: 2, 3 Mounting from lateral Size: 5, 7, 9	Ball non-retained type : No symbol
		Ball retained type : N
	Solid rail specification Size: 1	Ball non-retained type : Y
	Solid rail specification Size: 1	Ball non-retained type : No symbol

Table 1.2 Structure of MLF and LWLF

Model	Types of track rails	Structure
MLF	Standard rail specification	Ball retained type : No symbol
LWLF	Standard rail specification Size: 4, 6 Size: 10~42	Ball non-retained type : No symbol
		Ball retained type : B
	Tapped rail specification Size: 6 Size: 10~18	Ball non-retained type : N

For applicable models and sizes, see Table 2.1 and Table 2.2.

4 Size

Standard type 1, 2, 3, 5, 7, 9, 12, 15, 20, 25 For applicable models and sizes, see Table 2.1 and Table 2.2.
Wide type 4, 6, 10, 14, 18, 24, 30, 42

5 Number of slide units

: C○ For an assembled set, indicates the number of slide units assembled on a track rail. For a single slide unit, only "C1" is specified.

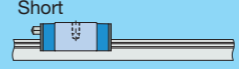

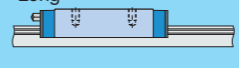

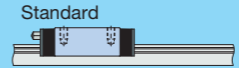

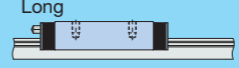

6 Length of track rail

: R○ Indicate the length of track rail in mm.
For standard and maximum lengths, see Table 3.1, Table 3.2, and Table 3.3.

7 Material type

Stainless steel made : No symbol For applicable models and sizes, see Table 2.1 and Table 2.2.
High carbon steel made : CS

Table 2.1 Models and sizes of standard type ML(F) and LWL(F) series

Maximum length	1 500	1 520	1 600	1 600	

unit: mm

Note (1) Not applicable to track rail with stopper pins (supplemental code "/S").

Remarks 1. A typical identification number is indicated, but is applied to all models of the same size.

2. If not directed, E dimensions for both ends will be the same within the range of standard E dimensions. To change the dimensions, indicate the specified rail mounting hole positions "/E" of special specification. For more information, see page III-29.

— Preload Amount —

8 Preload amount	Clearance	: T ₀	Specify this item for an assembled set or a single slide unit. For details of the preload amount, see Table 4. For applicable preload types, see Table 5.1 and Table 5.2.
	Standard	: No symbol	
	Light preload	: T ₁	

Table 4 Preload amount

Preload type	Item	Preload symbol	Preload amount N	Operational conditions
Clearance		T ₀	0 ⁽¹⁾	• Very light motion
Standard		(No symbol)	0 ⁽²⁾	• Light and precise motion
Light preload		T ₁	0.02 C ₀	• Almost no vibrations • Load is evenly balanced • Light and precise motion

Notes ⁽¹⁾ There is zero or subtle clearance.

⁽²⁾ Indicates zero or minimal amount of preload.

Remark: C₀ indicates the basic static load rating.

Table 5.1 Application of preload (Standard type)

Size	Preload type (preload symbol)		
	Clearance (T ₀)	Standard (No symbol)	Light preload (T ₁)
1	○	—	—
2	○	—	—
3	○	—	—
5	○	○	—
7	○ ⁽¹⁾	○	○ ⁽¹⁾
9	○ ⁽¹⁾	○	○ ⁽¹⁾
12	○ ⁽¹⁾	○	○ ⁽¹⁾
15	○ ⁽¹⁾	○	○ ⁽¹⁾
20	○	○	○
25	○	○	○

Note ⁽¹⁾ Not applicable when /HB is specified.

Remark: The mark indicates that interchangeable specification products are available.

Table 5.2 Application of preload (Wide type)

Size	Preload type (preload symbol)		
	Clearance (T ₀)	Standard (No symbol)	Light preload (T ₁)
4	○	—	—
6	○	—	—
10	○	○	—
14	○	○	○
18	○	○	○
24	○	○	○
30	○	○	○
42	○	○	○

Remark: The mark indicates that interchangeable specification products are available.

— Accuracy class —

9 Accuracy class	High	: H	For interchangeable specification products, assemble a slide unit and a track rail of the same accuracy class. Size 1 series have "No symbols." For the details of accuracy class, see Table 6.1 and 6.2.
	Precision	: P	

Table 6.1 Tolerance and allowable values (Series of size 1)

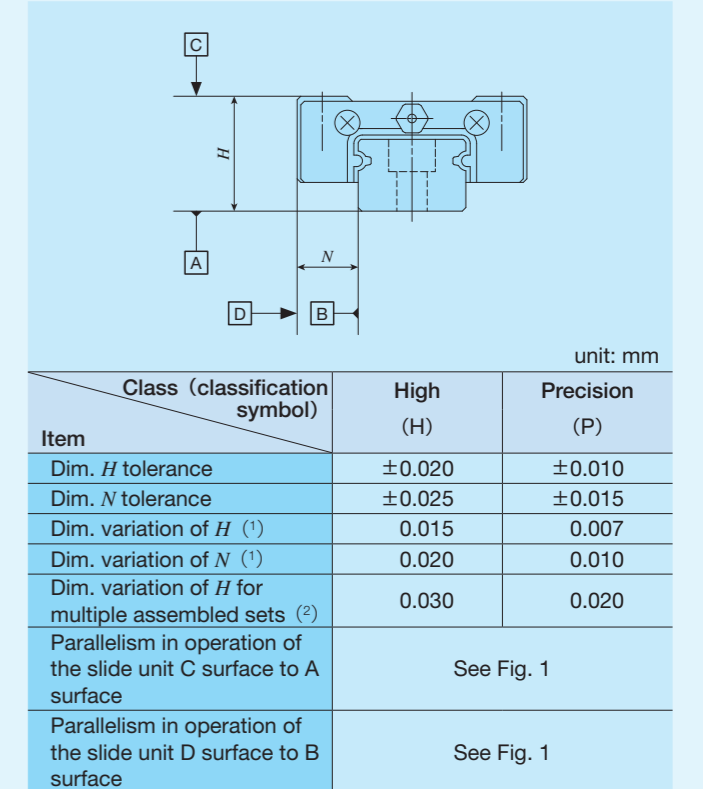

Table 6.2 Tolerance and allowance (Series of size 2 or higher)

Notes ⁽¹⁾ It means the size variation between slide units mounted on the same track rail.

⁽²⁾ Applicable to the interchangeable specification.

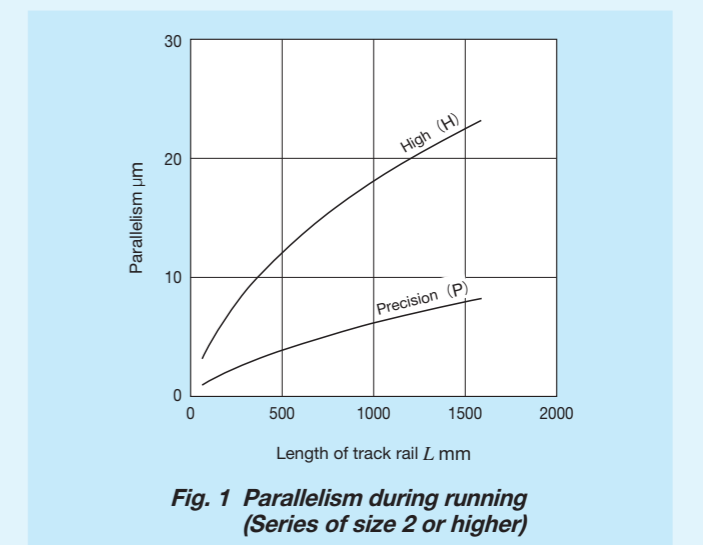

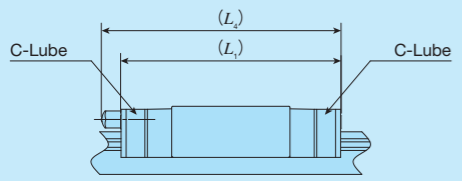

Table 9 Dimensions of slide unit with C-Lube plate (Supplemental code /Q)

unit: mm

Identification number	L_1	L_4	Identification number	L_1	L_4
LWLC 5...B	22	—	LWLFC 10...B	26.5	—
LWL 5...B	25	—	LWLFC 10...B	30.5	—

Lubrication

Lithium-soap base grease (MULTEMP PS No.2 [KYODO YUSHI CO., LTD.]) is pre-packed in ML(F) and LWL(F) series. Additionally, ML(F) series has C-Lube placed in the recirculation part of balls, so that lubricant replenishment interval can be extended and maintenance man-hours such as grease job can be reduced significantly. ML(F) series and LWL(F) series have grease nipple or oil hole as indicated in Table 14. Since the Size 1, 2, 3, 4 and 6 series do not have an oil hole, apply grease directly to the raceway part of the track rail for re-greasing. Supply nozzles fit to each shapes of grease nipple and dedicated supplying equipment (miniature greasers) fit to oil holes are also available. When these parts are desired, refer to Table 14 and Table 15.1 in III-22 and Table 16 of page III-23 to order.

Table 13 Oil hole specifications

unit: mm

Size	d_1	d_2
5	10	1.1
7	14	1.2
9	18	1.5
12	24	2

Table 14 Parts for lubrication

Size	Grease nipple type ⁽¹⁾	Applicable supply nozzle type	Bolt size of female threads for piping
5, 7, 9, 12	Oil hole	Miniature greaser	—
15, 20	A-M3	A-5120V A-5240V B-5120V B-5240V	—
25	B-M4	A-8120V B-8120V	M4

Note (1) For specifications of grease nipple, see Table 15.1 on page III-22.

Dust Protection

The slide unit of ML(F) series and LWL(F) series is dust protected by end seals included as standard. However, if large amount of contaminant or dust are floating, or if large particles of foreign substances such as chips or sand may adhere to the track rail, it is recommended to attach a protective cover to the linear motion mechanism. No end seal is provided for size 1, 2, 3, 4 or 6 series. For applications in the environment not clean enough, cover the entire unit with a protective case, etc. to prevent harmful foreign substances such as dust and particles from outside to enter.

Precaution for Use

① Mounting surface, reference mounting surface and general mounting structure

When mounting the ML(F) series and LWL(F) series, properly align the reference mounting surfaces B and D (D1 or D2) of the track rail and slide unit with the reference mounting surface of the table and bed before fixing them. (See Fig. 2) Reference mounting surfaces B and D (D1 or D2) and mounting surfaces A and C are precisely ground. By machining the mounting surface of the mating member, such as machine or device, to high accuracy and mounting them properly, stable linear motion with high accuracy is obtained.

Reference mounting surface of the slide unit of size 2 or higher is the opposite side of the **IKO** mark. The track rail reference mounting surface is identified by locating the **IKO** mark on the top surface of the track rail. It is the side surface above the mark (in the direction of the arrow). (See Fig. 5.2)

Reference mounting surface of the slide unit of size 1 is located at both right and left sides (D1 and D2). (See Fig. 5.1)

The track rail of LWL1...Y has the mounting structure of lateral direction. Two types of mounting structure as shown in Fig. 3.1 and Fig. 3.2 are available.

Fig. 2 Reference mounting surface and typical mounting structure

Fig. 3.1 Reference mounting surface of LWL1...Y and typical mounting structure ①

Fig. 3.2 Reference mounting surface of LWL1...Y and typical mounting structure ②

Fig. 4 Reference mounting surface of size 2, 3, 4 and 6 series and typical mounting structure

Fig. 5.1 Reference mounting surface of series size 1 or higher

Fig. 5.2 Reference mounting surface of series size 2 or higher

② Mounting screws for slide unit

To mount a slide unit, tightly fasten the bolt against female thread of slide unit.

The female thread is created through holes of the slide unit for size 1 series, and also through holes for the slide unit and track rail for size 2, 3, 4 and 6 series. When the fixing thread depth of the mounting screw goes too deep, it can interfere with the track rail and impact the running accuracy or product life so that the fixing thread depth should be within the screwing depth specified in the dimension table. Also prepare the small screws dedicated to precision devices (head diameter 1.8 mm or smaller) for the mounting bolt of slide unit of size 1.

③ Mounting screws for track rail

In the size 2 and 3 series and tapped rail specifications, track rail mounting bolts are not appended. Prepare mounting bolts whose fixing thread depth is less than H_4 in dimension table.

④ Shoulder height and corner radius of the reference mounting surface

For the opposite corner of the mating reference mounting, it is recommended to have relieved fillet as indicated in Fig. 6 Recommended value for the shoulder height on the mating side is indicated in Table 16.

Fig. 6 Corner of the mating reference mounting

⑤ Tightening torque for mounting bolts

Typical tightening torques for mounting ML(F) series and LWL(F) series to the steel mating member material are indicated in Table 15. When vibration and shock of the machine or device are large, fluctuating load is large, or moment load is applied, fix it by using the torque 1.2 to 1.5 times larger than the value indicated in the table as necessary. If the mating member material is cast iron or aluminum, reduce the tightening torque depending on the strength characteristic of the mating member material.

Table 15 Tightening torque for fixing screw

Bolt size	Tightening torque N · m	
	Stainless steel-made screw	High carbon steel-made screw
M1 ×0.25	0.04	—
M1.4×0.3	0.10	—
M1.6×0.35	0.15	—
M2 ×0.4	0.31	—
M2.5×0.45	0.62	—
M3 ×0.5	1.1	1.2
M4 ×0.7	2.5	2.8
M5 ×0.8	5.0	5.6
M6 ×1	8.5	—

Remarks 1. The calculation is based on the tightening torque, strength division 8.8 and property division A2-70.

2. It is recommended that the tightening torque of slide unit mounting holes for series size 1 is to be 70 to 80 % of the values in the table.

Table 16 Shoulder height and corner radius of the reference mounting surface

unit: mm

Identification number		Mounting part of slide unit		Mounting part of track rail	
		Shoulder height h_1	Corner radius R_1 (Maximum)	Shoulder height h_2 ⁽¹⁾	Corner radius R_2 (Maximum)

-	LWLF 30...BCS		0.4		
MLF 42	LWLF 42...B	5	0.2	3	0.2
-	LWLF 42...BCS		0.4		

Note ⁽¹⁾ For models with under seals (supplemental code "U"), it is recommended to use the values 1mm smaller than the values in the table. However for the models of size 9 with under seal, 0.8 mm is recommended.

Remark: A typical identification number is indicated, but is applied to all models of the same size.

Mounting Bolt

For LWL(F) series, track rail mounting bolt of slide unit and tapped rail specification shown in Table 17 and Table 18 are available. If these parts are necessary, please contact **IKO**.

Table 17 Cross-recessed head screw for precision equipment

unit: mm

Bolt size (d)	Pitch of screw P	d_k	k	l
M1	0.25	1.8	0.45	3, 4, 5
M1.4 ⁽¹⁾	0.3	2.5	0.8	2.5, 3, 4
M1.6 ⁽¹⁾	0.35	2.8	0.85	4, 5, 6
M2 ⁽¹⁾	0.4	3.5	1	3, 4, 5

Note ⁽¹⁾ Based on cross-recessed head screw for precision equipment (Number 0) in Japan Camera Industry Standard JCIS 10-70.

Remark: The dimensions are different from the appended track rail mounting bolts.

Table 18 Hexagon socket head bolt

unit: mm

Bolt size (d)	Pitch of screw P	d_k	k	s	t	l

Notes (1) Track rail lengths L are shown in Table 3.1 on page II-10.
 (2) Track rail mounting bolts are not appended.
 (3) Prepare screws according to mounting structure.
 (4) Choose screws whose dimension allow fixing thread depth into track rail ℓ to be less than H_4 .
 (5) The direction of basic dynamic load rating (C), basic static load rating (C_0), and static moment rating (T_0 , T_x , T_y) are shown in the sketches below.
 The upper values of T_x and T_y are for one slide unit and the lower values are for two slide units in close contact.
 Remarks 1. Metal parts are made of stainless steel.
 2. Do not disassemble a slide unit from the track rail because steel balls are not retained. No end seal is attached.
 3. The specification of small size mounting bolts (M2 and less) are show on page II-22. If needed, please contact **IKO**.

 If hybrid C-Lube Linear Way specification (supplemental code "/HB") is selected in ML series, see Table 10 on page II-17.
 Remarks 1. The specification of oil hole is shown in Table 13 on page II-18.
 2. The identification numbers with * are our semi-standard items.

- Notes (1) Track rail lengths L are shown in Table 3.1 on page II-10 and Table 3.3 on page II-12.
 (2) The appended track rail mounting bolts are hexagon socket head bolts equivalent to JIS B 1176. For stainless steel model, stainless steel made bolts are appended.
 (3) The direction of basic dynamic load rating (C), basic static load rating (C_0), and static moment rating (T_0 , T_x , T_y) are shown in the sketches below.
 The upper values of T_x and T_y are for one slide unit and the lower values are for two slide units in close contact.
 If hybrid C-Lube Linear Way specification (supplemental code "/HB") is selected in MLC15, ML15, MLG15, and MLL15, see Table 10 on page II-17.
 (4) The shapes of grease nipple vary by size. The specifications are shown in Table 14 on page II-18.

Notes (1) Track rail lengths L are shown in Table 3.2 on page II-11.
 (2) Size 4 and 6 are non-retained-ball type. No end seal is attached.
 (3) Choose screws whose dimension allow fixing thread depth into track rail ℓ to be less than H_4 .
 (4) The direction of basic dynamic load rating (C), basic static load rating (C_0), and static moment rating (T_0 , T_x , T_y) are shown in the sketches below.
 The upper values of T_x and T_y are for one slide unit and the lower values are for two slide units in close contact.
 (5) No oil hole is prepared for size 4 and 6.
 The specification of oil hole for size 10 is shown in Table 13 on page II-18.
 Remark: The identification numbers with * are our semi-standard items.

Points

1 Compact and versatile series with utility

Pursuit making lower, slimmer, and shorter to compact in all respects. Versatile linear motion rolling guide achieved utility.

2 Wide range of variations for your needs

For details ▶ P.I-26

As two shapes of slide unit, flange type and block type (with small width) and 3 types with different slide unit length with same section are available, you can select an optimal product for the specifications of your machine and device.

3 Stainless steel selections superior in corrosion resistance are listed on lineup.

For details ▶ P.I-41

Products made of stainless steel are highly resistant to corrosion, so that they are suitable for applications where rust prevention oil is not preferred, such as in cleanroom environment.

4 Achieved smooth and quiet motion Low Decibel Linear Way E

Due to resin separator built-in balls, Low Decibel Linear Way E achieved smooth and quiet motion by eliminating of direct contact of balls each other. This feature reduces noise level in factory and contributes to a human-friendly environment.

Identification Number and Specification

Example of an identification number

The specifications of ME and LWE (···Q) series are indicated by the identification number. Indicate the identification number, consisting of a model code, dimensions, a part code, a material code, a preload symbol, a classification symbol, an interchangeable code, and a supplemental code for each specification to apply.

Interchangeable specification	1	2	3	4	5	1	6	7	8	9	10

		340 (6)	460 (8)	460 (8)	760 (10)
		460 (8)	640 (11)	640 (11)	1 000 (13)
		640 (11)	820 (14)	820 (14)	
	820 (14)	1 000 (17)	1 000 (17)		
Pitch of mounting holes F		60	60	60	80
E (1)		20	20	20	20
Standard E dimensions (2)	or higher	6	8	9	9
	below	36	38	39	49
Maximum length (3)		1 200 (1 600)	1 200 (1 960)	1 200 (1 960)	1 200 (1 960)

Notes (1) When specifying a butt-jointing track rail (supplemental code "/T"), pay attention to the E dimension at the butt-jointing part.
 (2) Not applicable to the track rail with female threads for bellows (supplemental code "/J").
 (3) Track rails with the maximum lengths shown in () can also be manufactured. Consult **IKO** for further information.

Remarks 1. A typical identification number is indicated, but is applied to all models of the same size.
 2. Indicate "LWE" for the model code of single track rail regardless of the series and the slide unit model to be combined.
 3. If not directed, E dimensions for both ends will be the same within the range of standard E dimensions. To change the dimensions, indicate the specified rail mounting hole positions "/E" of special specification. For more information, see page III-29.

7 Preload amount	Clearance	: Tc	Specify this item for an assembled set or a single slide unit.
	Standard	: No symbol	For details of the preload amount, see Table 3.
	Light preload	: T ₁	For applicable combinations of accuracy class and preload amount, see Table 4.
	Medium preload	: T ₂	

8 Accuracy class	Ordinary	: No symbol	For interchangeable specification products, assemble a slide unit and a track rail of the same accuracy class.
	High	: H	For details of accuracy class, see Table 5.
	Precision	: P	
	Super precision	: SP	For applicable combinations of accuracy class and preload amount, see Table 4.

Table 3 Preload amount

Preload type	Item	Preload symbol	Preload amount N	Operational conditions
Clearance		T _c	0 ⁽¹⁾	· Very light motion · To absorb slight errors
Standard		(No symbol)	0 ⁽²⁾	· Light and precise motion
Light preload		T ₁	0.02C ₀	· Almost no vibrations · Load is evenly balanced · Light and precise motion
Medium preload		T ₂	0.05C ₀	· Medium vibration · Medium overhung load

Notes (1) Clearance of about 10 μm
 (2) Indicates zero or minimal amount of preload
 Remark: C₀ indicates the basic static load rating.

Table 4 Combination of accuracy class and preload

Preload type (preload symbol)	Classification (classification symbol)			
	Ordinary (No symbol)	High (H)	Precision (P)	Super precision (SP)
Clearance (T _c) (1)	○	—	—	—
Standard (no symbol)	○	○	○	○
Light preload (T ₁)	—	○	○	○
Medium preload (T ₂) (1)	—	○	○	○

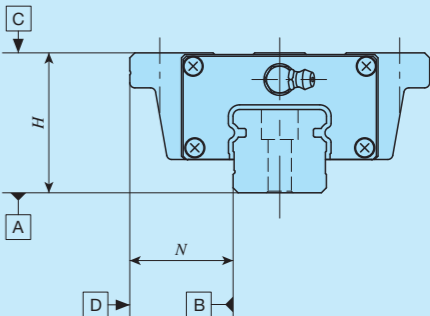

Note (1) Not applicable to LWE...Q series.
 Remark: The mark  indicates that interchangeable specification products are available.

Table 5 Tolerance and allowance

Item	Class (classification symbol)	Ordinary	High	Precision	Super precision

Notes (1) The specification and mounting positions of grease nipple are different from those of the standard specification product. Provided grease nipple for size 15 models is NPB2 type (special specification).
For details of dimensions, please contact **IKO**

(2) Dimensions of the specification that female threads for bellows are fitted to both ends of the slide unit are indicated.

Remark: This is applicable to stainless steel models of the same size.

Table 9 Track rail mounting bolt size (Supplemental code /MA)

Size	Bolt size for track rail
15	M 3×16 M 4×16(1)
20	M 5×16
25	M 6×20
30	M 6×25
35	M 8×30
45	M10×35

Note (1) Applicable to the track rail of supplemental code "/M4" of special specification.

Remarks 1. Hexagon socket head bolts equivalent to JIS B 1176
2. For stainless steel model, stainless steel made bolts are appended.

Remarks 1. The dimensions of the slide unit with scrapers at both ends are indicated.
2. A typical identification number is indicated, but is applied to all models of the same size.

Lubrication

Lithium-soap base grease with extreme-pressure additive (Alvania EP grease 2 [SHOWA SHELL SEKIYU K. K.]) is pre-packed in ME and LWE (···Q) series. Additionally, ME series has C-Lube placed in the recirculation part of balls, so that the interval for reapplying lubricant can be extended and maintenance works such as grease job can be reduced significantly.

ME and LWE (···Q) series are provided with grease nipple shown in Table 15. Supply nozzles matching the size of grease nipple are also available. For order of these parts for lubrication, see Table 15.1 on page III-22 and Table 16 on page III-23.

Table 15 Parts for lubrication

Size	Grease nipple type (1)	Applicable supply nozzle type	Bolt size of female threads for piping
15	A-M4	A-5120V A-5240V B-5120V B-5240V	M4
20	B-M6	Grease gun available on the market	M6
25			
30			
35	JIS type 4		PT1/8
45			

Note (1) For the specifications of grease nipple, see Tables 15.1 and 15.2 on page III-22.

Dust Protection

ME and LWE (···Q) series of slide units are equipped with end seals as standard for dust protection. However, if large amount of contaminant or dust are floating, or if large particles of foreign substances such as chips or sand may adhere to the track rail, it is recommended to cover the whole unit with bellows or telescope type shield, etc. Bellows to match the dimension of ME and LWE (···Q) are optionally available. The bellows are easy to mount and provide excellent dust protection. For order of these products, see page III-25.

Precaution for Use

1 Mounting surface, reference mounting surface, and general mounting structure

To mount ME or LWE (···Q) series, correctly fit the reference mounting surfaces B and D of the slide unit and the track rail to the reference mounting surfaces of the table and the bed, and then fix them tightly. (See Fig. 2.)

The reference mounting surfaces B and D and mounting surfaces A and C are precisely ground. Machining the mounting surface of the table and bed, such as machine or device, to high accuracy and mounting them properly will ensure stable linear motion with high accuracy. Reference mounting surface of the slide unit is the opposite side of the **IKO** mark. The track rail reference mounting surface is identified by locating the **IKO** mark on the top surface of the track rail. It is the side surface above the mark (in the direction of the arrow). (See Fig. 3.)

Fig. 2 Reference mounting surface and typical mounting structure

Fig. 3 Reference mounting surface

2 Corner radius and shoulder height of reference mounting surfaces

For the opposite corner of the mating reference mounting, it is recommended to have relieved fillet as indicated in Fig. 4. Table 17 shows recommended shoulder heights and corner radius of the mating reference mounting surfaces.

Fig. 4 Corner of the mating reference mounting

3 Tightening torque for fixing screw

Typical tightening torque for mounting of the ME or LWE (···Q) series to the steel mating member material is indicated in Table 16. When vibration and shock of the machine or device are large, fluctuating load is large, or moment load is applied, fix it by using the torque 1.2 to 1.5 times larger than the value indicated in the table as necessary. If the mating member material is cast iron or aluminum, reduce the tightening torque depending on the strength characteristic of the mating member material.

Table 16 Tightening torque for fixing screw

Bolt size	Tightening torque N · m	
	High carbon steel-made screw	Stainless steel-made screw
M 3×0.5	1.7	1.1
M 4×0.7	4.0	2.5
M 5×0.8	7.9	5.0
M 6×1	13.3	8.5
M 8×1.25	32.0	20.4
M10×1.5	62.7	—
M12×1.75	108	—

Remark: The calculation is based on the tightening torque, strength division 12.9 and property division A2-70.

Table 17 Shoulder height and corner radius of the reference mounting surface

Size	Mounting part of slide unit		Mounting part of track rail	
	Shoulder height h ₁	Corner radius R ₁ (maximum)	Shoulder height h ₂	Corner radius R ₂ (maximum)
15	4	1 (0.5) (1)	3	0.5

Notes (1) Track rail lengths L are shown in Tables 2.1 and 2.2 on page II-45.
 (2) Track rail mounting bolts are not appended. Hexagon socket head bolts of JIS B 1176 with strength division 12.9 are recommended.
 (3) The direction of basic dynamic load rating (C), basic static load rating (C_0), and static moment rating (T_0 , T_x , T_y) are shown in the sketches below. The upper values of T_x and T_y are for one slide unit and the lower values are for two slide units in close contact.
 (4) The shapes of grease nipple vary by size. The specifications are shown in Table 15 on page II-51.
 Remark: Values in () represent dimensions when the track rail mounting hole is "M4". Indicate the identification number with "/M4" at the end.

Points

- **High rigidity series with the maximum load rating among ball types**

High rigidity linear motion rolling guide having a maximum load rating among ball-type units by incorporating a large-diameter ball.

- **Wide range of variations for your needs** For details ▶ P.I-26

As the lineup of 5 types of slide unit shape including the flange type, block type with small width and side mounting type, etc., and 3 types with different slide unit length with same section are available, you can select an optimal product for the specifications of your machine and device.

- **Stainless steels superior in corrosion resistance are listed on lineup.** For details ▶ P.I-41

Products made of stainless steel are highly resistant to corrosion, so that they are suitable for applications where rust prevention oil is not preferred, such as in cleanroom environment.

- **Series of ultra seal specification for excellent dust protection performance**

Products of ultra seal specifications have excellent dust protection performance thanks to the combination of the dedicated track rail finished with total ground and slide unit with end seal and under seal of special shapes. Special specification with inner seal further improves dust protection property of the ball circulation section against foreign substances from the upper surface of the track rail.

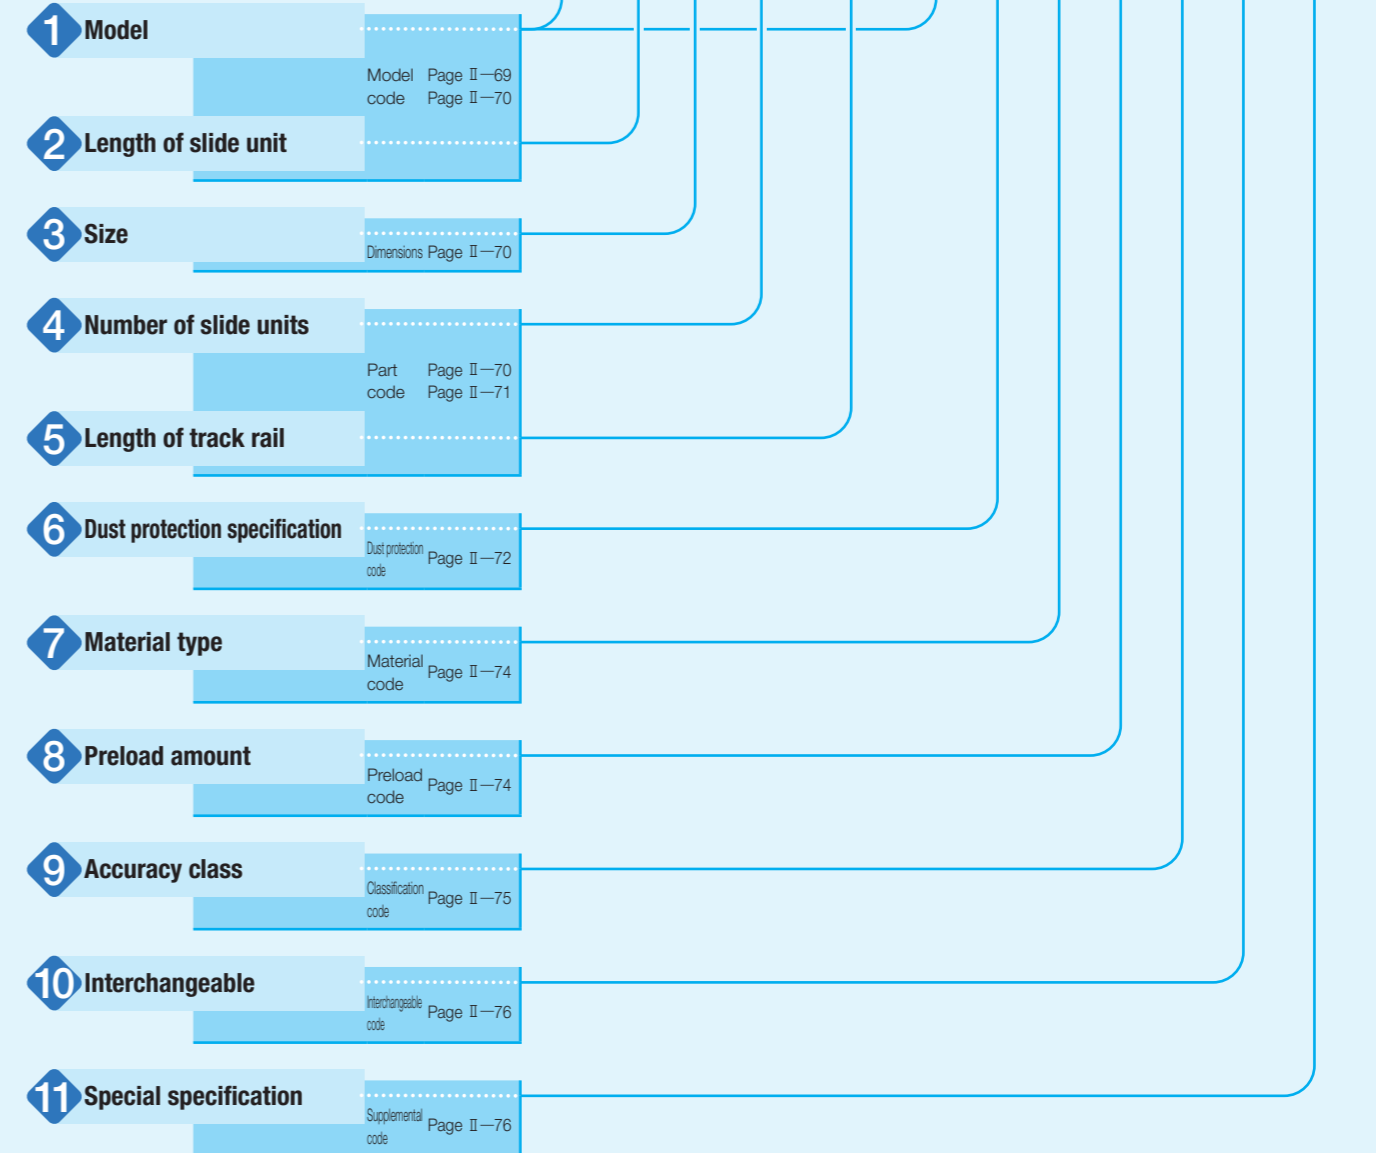

Identification Number and Specification

Example of an identification number

The specifications of MH and LWH series are indicated by the identification number. Indicate the identification number, consisting of a model code, dimensions, a part code, a dust protection code, a material code, a preload symbol, a classification symbol, an interchangeable code, and a supplemental code for each specification to apply.

Interchangeable specification	1	2	3	4	5	6	7	8	9	10	11
Single slide unit	MHT	G	20	C1					T ₁	P	S1 /V
Single track rail (1)	LWH		20		R840	B				P	S1 /F
Assembled set	MHT	G	20	C1	R840				T ₁	P	S1 /FV

Non-interchangeable specification	1	2	3	4	5	6	7	8	9	10	11
Assembled set	MHT	G	20	C1	R840				T ₁	P	/FV

Note (1) Indicate "LWH...B" or "LWH" for the model code of the single track rail regardless of the series and the combination of slide unit models.

MH · LWH

Identification Number and Specification — Model —

1 Model	C-Lube Linear Way MH (MH series)	Flange type mounting from bottom : MH Flange type mounting from top ⁽²⁾ : MHT Block type mounting from top : MHD Compact block type mounting from top : MHS
	Linear Way H ⁽¹⁾ (LWH series)	Flange type mounting from bottom : LWH (...B) Flange type mounting from top ⁽²⁾ : LWHT (...B) Block type mounting from top : LWHD (...B) Compact block type mounting from top : LWHS (...B) Side mounting type : LWHY

For applicable models and sizes, see Table 1.1 and Table 1.2.
Indicate "LWH...B" or "LWH" for the model code of the single track rail regardless of the series and the combination of slide unit models.

Notes ⁽¹⁾ This model has no built-in C-Lube.
⁽²⁾ Some models may be mounted upward.

Table 1.1 Models and sizes of MH and LWH series

Material	Shape	Length of slide unit	Model	Size

		640 (16)			1 980 (33)	
Pitch of mounting holes F		40	60	60	60	80
E		20	30	30	30	40
Standard E or higher dimensions (1) below		5.5	7	8	9	10
		25.5	37	38	39	50
Maximum length (2)		1 480	1 500 (3 000)	1 980 (3 000)	3 000 (3 960)	2 960 (4 000)
Item	Identification number	MH 35 LWH35...B	MH 45 LWH45...B	LWH55...B	LWH65...B	LWHG85(3)
Standard length L (n)		480 (6)	840 (8)	840 (7)	1 500 (10)	—
		640 (8)	1 050 (10)	1 200 (10)	1 950 (13)	
		800 (10)	1 260 (12)	1 560 (13)	3 000 (20)	
		1 040 (13)	1 470 (14)	1 920 (16)		
		1 200 (15)	1 995 (19)	3 000 (25)		
		1 520 (19)				
Pitch of mounting holes F		80	105	120	150	180
E		40	52.5	60	75	90
Standard E or higher dimensions (1) below		10	12.5	15	17	23
		50	65	75	92	113
Maximum length (2)		2 960 (4 000)	2 940 (3 990)	3 000 (3 960)	3 000 (3 900)	2 880

Notes (1) This does not apply to female threads for bellows (supplemental code "/J").

(2) Length up to the value in () can be produced. If needed, please contact **IKO**.

(3) This unit is prepared based on respective usages.

Remarks 1. A typical identification number is indicated, but is applied to all models of the same size.

2. Indicate "LWH" for series of size 12 or "LWH...B" for series of size 15 or above for the model code of the single track rail regardless of the series and the combination of slide unit models.

3. For high sealed specifications, refer to Table 2.3 and Table 2.4.

4. If not directed, E dimensions for both ends will be the same within the range of standard E dimensions. To change the dimensions, indicate the specified rail mounting hole positions "/E" of special specification. For more information, see page III-29.

6 Dust protection specification

Standard specification : No symbol For applicable models and sizes, see Table 1.1 and Table 1.2.
Ultra seal specification : M Each specification of ultra seal specification with track rail mounting from bottom is in compliance to the ultra seal specification.
Ultra seal specification with track rail mounting from bottom : MU Ultra seal specification with track rail mounting from bottom applies to products to fix the track rail on the mounting surface side by pressing in the aluminum caps for rail mounting holes to the mounting hole of the track rail in advance. As the upper surface of the track rail is flat, adhesion to the seal is high and dust protection effect is improved further.
For track rail specifications, see Table 2.3 and Table 2.4.

Table 2.2 Standard and maximum length of stainless steel track rail

unit: mm

Item	Identification number	MH 8...SL LWH8...SL	MH 10...SL LWH10...SL	MH 12...SL LWH12...SL	MH 15...SL LWH15...SL	MH 20...SL LWH20...SL	MH 25...SL LWH25...SL	MH 30...SL LWH30...SL

Maximum length of butt-jointing track rail		4 200	5 640	8 700	8 480	8 480	8 295

Note ⁽¹⁾ This does not apply to female threads for bellows (supplemental code "/J").

Remarks 1. A typical identification number is indicated, but is applied to all models of the same size.

2. Track rail mounting bolt is not included.

3. If not directed, E dimensions for both ends will be the same within the range of standard E dimensions. To change the dimensions, indicate the specified rail mounting hole positions "/E" of special specification. For more information, see page III-29.

—Material Type · Preload Amount—

7 Material type	High carbon steel made	: No symbol	For applicable models and sizes, see Table 1.1 and Table 1.2.
	Stainless steel made	: SL	
8 Preload amount	Clearance	: T ₀	Specify this item for an assembled set or a single slide unit.
	Standard	: No symbol	For details of the preload amount, see Table 3.
	Light preload	: T ₁	For applicable preload types, see Table 4.
	Medium preload	: T ₂	
	Heavy preload	: T ₃	

Table 3 Preload amount

Item	Preload symbol	Preload amount N	Operational conditions
Preload type			
Clearance	T ₀	0 ⁽¹⁾	· Very light motion
Standard	(No symbol)	0 ⁽²⁾	· Light and precise motion
Light preload	T ₁	0.02C ₀	· Almost no vibrations · Load is evenly balanced · Light and precise motion
Medium preload	T ₂	0.05C ₀	· Medium vibration · Medium overhung load
Heavy preload	T ₃	0.08C ₀	· Operation with vibration and/or shock · Overhanging load applied · Heavy cutting

Notes ⁽¹⁾ There is zero or subtle clearance.

⁽²⁾ Indicates zero or minimal amount of preload.

Remark: C₀ indicates the basic static load rating.

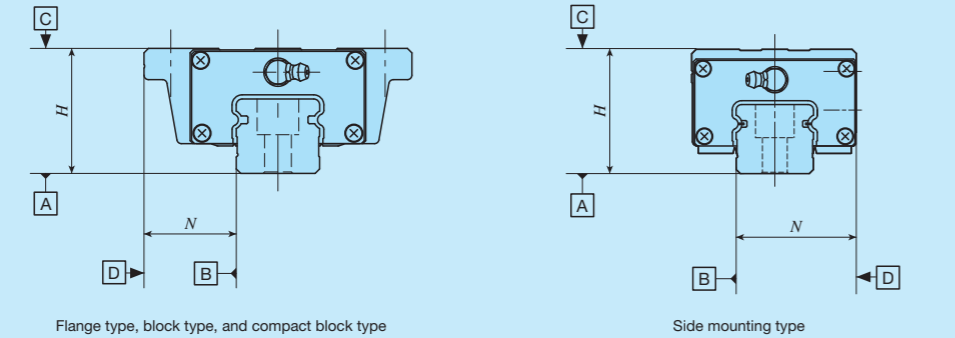

Table 4 Application of preload

Size	Preload type (preload symbol)				
	Clearance (T ₀)	Standard (No symbol)	Light preload (T ₁)	Medium preload (T ₂)	Heavy preload (T ₃)
8	○	○	○	—	—

Notes (1) Grease nipple specifications and mounting position are different from standard specifications. Provided grease nipple for size 15 models is NPB2 type (special specification). For details of dimensions, contact IKO.

(2) Dimensions of the specification that female threads for bellows are fitted to both ends of the slide unit are indicated.

Remark: This is applicable to stainless steel models of the same size.

45			
55			
65			
85 ⁽²⁾	JIS type 4		

Notes ⁽¹⁾ For specifications of grease nipple, refer to Tables 15.1 and 15.2 in page III-22.
⁽²⁾ This unit is prepared based on respective usages.

In the series of size 8 to 12 of MH series and LWH series, lithium-soap base grease (MULTEMP PS No.2, KYODO YUSHI) is pre-packed, and in the series of size 15 to 85, lithium-soap base grease containing extreme-pressure additive (Alvania EP grease 2, SHOWA SHELL SEKIYU K. K.) is pre-packed. Additionally, MH series has C-Lube placed in the recirculation part of balls, so that the interval for reapplying lubricant can be extended and maintenance works such as grease job can be reduced significantly. MH series and LWH series have grease nipple or oil hole as indicated in Table 15. Supply nozzles fit to each shapes of grease nipple and dedicated supplying equipment (miniature greasers) fit to oil holes are also available. For these parts for lubrication, refer to Table 14 and Table 15.1 on Page III-22, and Table 16 on page III-23 if required.

Table 14 Oil hole specifications

Size	d_1	d_2
8	0.5	1.5
10		

Dust Protection

The slide units of MH series and LWH series are equipped with end seals and under seals as standard for dust protection. However, if large amount of contaminant or dust are floating, or if large particles of foreign substances such as chips or sand may adhere to the track rail, it is recommended to cover the entire unit with bellows, telescopic shields, etc. MH series and LWH series are provided with specific bellows. The bellows are easy to mount and provide excellent dust protection. If needed, please refer to III-25 for ordering. And, track rail mounting from bottom with no mounting hole on the upper surface of the track rail (Figure 3) is also available. If needed, contact **IKO**.

Fig. 3 Track rail mounting from bottom

Precaution for Use

1 Mounting surface, reference mounting surface and typical mounting structure

When mounting the MH series and LWH series, properly align the reference mounting surfaces B and D of the track rail and slide unit with the reference mounting surface of the table and bed and fix them. (See Fig. 4.)

The reference mounting surfaces B and D and mounting surfaces A and C are precisely ground. Machining the mounting surface of the table and bed, such as machine or device, to high accuracy and mounting them properly will ensure stable linear motion with high accuracy.

Reference mounting surface of the slide unit is the opposite side of the **IKO** mark. The track rail reference mounting surface is identified by locating the **IKO** mark on the top surface of the track rail. It is the side surface above the mark (in the direction of the arrow). (See Fig. 5.)

Fig. 4 Reference mounting surface and typical mounting structure

Fig. 5 Reference mounting surface

2 Corner radius and shoulder height of reference mounting surfaces

For the opposite corner of the mating reference mounting, it is recommended to have relieved fillet as indicated in Fig. 6. Recommended value for the shoulder height on the mating side is indicated in Table 16.

Fig. 6 Corner of the mating reference mounting

Table 16 Shoulder height and corner radius of the reference mounting surface

Size	Mounting part of slide unit		Mounting part of track rail	
	Shoulder height h_1	Corner radius R_1 (Maximum)	Shoulder height h_2	Corner radius R_2 (Maximum)
8	3.5(4) ⁽¹⁾	0.5	1.6 ⁽²⁾	0.2
10	4.5(5) ⁽¹⁾	0.5	1.9 ⁽²⁾	0.2
12	6	0.5	2.7 ⁽²⁾	0.7
15	4	0.5	3	0.5
20	5	0.5	3	0.5
25	6	1	4	1
30	8	1	5	1
35	8	1	6	1
45	8	1.5	7	1.5
55	10	1.5	8	1.5
65	10	1.5	10	1.5

unit: mm

Notes ⁽¹⁾ For MHD and LWHD, the values within () are applied.

⁽²⁾ For models with under seals (supplemental code "U"), it is recommended to use the values 0.6 mm smaller than the values in the table.

3 Tightening torque for fixing screw

Typical tightening torques for mounting of the MH series and LWH series to the steel mating member material are indicated in Table 17. When vibration and shock of the machine or device are large, fluctuating load is large, or moment load is applied, fix it by using the torque 1.2 to 1.5 times larger than the value indicated in the table as necessary. If the mating member material is cast iron or aluminum, reduce the tightening torque depending on the strength characteristic of the mating member material.

Table 17 Tightening torque for fixing screw

Bolt size	Tightening torque N · m		
	High carbon steel-made screw		Stainless steel-made screw
	Size: 12	Size: 15 or larger	
M 1.6×0.35	—	—	0.15
M 2 ×0.4	—	—	0.31
M 2.3×0.4	—	—	0.48
M 2.6×0.45	—	—	0.70
M 3 ×0.5	1.2	—	1.1
M 4 ×0.7	2.8	4.0	2.5
M 5 ×0.8	—	7.9	5.0
M 6 ×1	—	13.3	8.5
M 8 ×1.25	—	32.0	20.4
M10 ×1.5	—	62.7	39.7
M12 ×1.75	—	108	—
M14 ×2	—	172	—
M16 ×2	—	263	—
M20 ×2.5	—	512	—
M24 ×3	—	882	—

Remark: The recommended tightening torque is calculated based on strength division 8.8 for high carbon steel bolts in product size 12, strength division 12.9 for carbon steel bolts in product size 15 or larger, and property division A2-70 for stainless steel bolt.

Notes (1) Track rail lengths L are shown in Table 2.1 on page II-71, Table 2.2 on page II-72, and Tables 2.3 and 2.4 on page II-73.
 (2) Choose bolts whose dimension allow fixing thread depth into track rail to be less than h_1 .
 (3) The appended track rail mounting bolts are hexagon socket head bolts equivalent to JIS B 1176. For stainless steel model, stainless steel bolts are appended.
 In an assembled set of MH series and LWH...MU model, track rail mounting bolts are not appended.
 (4) Basic dynamic load rating (C), Basic static load rating (C_0), static moment rating (T_0 , T_x , and T_y) are values for the direction indicated in the following figure.
 The upper values of T_x and T_y are for one slide unit and the lower values are for two slide units in close contact.
 (5) The shapes of grease nipple vary by size. For details of special specifications, see page Table 15 on page II-82.

Remark: The identification numbers with * are our semi-standard items.

Notes (1) Track rail lengths L are shown in Table 2.1 on page II-71, Table 2.2 on page II-72, and Tables 2.3 and 2.4 on page II-73.

(2) Choose bolts whose dimension allow fixing thread depth into track rail to be less than h1.

(3) The appended track rail mounting bolts are hexagon socket head bolts equivalent to JIS B 1176. For stainless steel model, stainless steel bolts are appended.

In an assembled set of MH series and LWH···MU model, track rail mounting bolts are not appended.

(4) Basic dynamic load rating (C), Basic static load rating (C0), static moment rating (T0, Tx, and Ty) are values for the direction indicated in the following figure.

The upper values of Tx and Ty are for one slide unit and the lower values are for two slide units in close contact.

(5) The shapes of grease nipple vary by size. For details of special specifications, see page Table 15 on page II-82.

Remark: The identification numbers with * are our semi-standard items.

 (6) This unit is prepared based on respective usages.
 Remarks 1. The specifications of grease nipple are in Table 15 on page II-82.
 2. The identification numbers with * are our semi-standard items.

- Notes (1) Track rail lengths L are shown in Table 2.1 on page II-71 and Table 2.2 on page II-72.
 (2) The appended track rail mounting bolts are hexagon socket head bolts equivalent to JIS B 1176. For stainless steel model, stainless steel bolts are appended.
 In an assembled set of MH series, track rail mounting bolts are not appended.
 (3) Basic dynamic load rating (C), Basic static load rating (C_0), static moment rating (T_0 , T_x , and T_y) are values for the direction indicated in the following figure.
 The upper values of T_x and T_y are for one slide unit and the lower values are for two slide units in close contact.
 (4) Series of size 8 and 10 are provided with an oil hole. The specifications of oil holes are shown in Table 14 on page II-82.
 The specification of grease nipple for size 12 is shown in Table 15 on page II-82.

Linear Way F

LWF

Linear Way F

LWFF

Points

● Wide rail type series resistant to moment load

As track rail width is wide and distance between moment load points is long, this is a linear motion rolling guide resistant to moment load and complex load and suitable for serial use.

● Slide unit shapes for various usage

As the lineup of two flange types of slide unit shape with different dimensional series and three block types with small width are available, you can select an optimal product for the specifications of your machine and device.

● Stainless steels superior in corrosion resistance are listed on lineup.

For details P.I-41

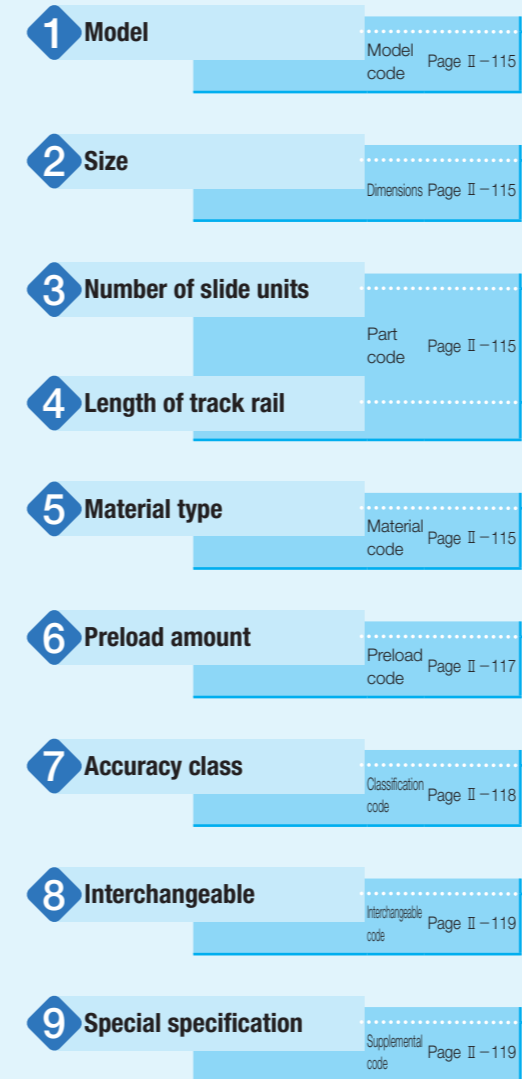

Products made of stainless steel are highly resistant to corrosion, so that they are suitable for applications where rust prevention oil is not preferred, such as in a cleanroom environment.

Identification Number and Specification

Example of an identification number

The specification of LWF series is indicated by the identification number. Indicate the identification number, consisting of a model code, dimensions, a part code, a material code, a preload symbol, a classification symbol, an interchangeable code, and a supplemental code for each specification to apply.

	1	2	3	4	5	6	7	8	9
Interchangeable specification									
Single slide unit	LWFF	37	C1			T ₁	P	S1	/Z
Single track rail (1)	LWFF	37		R800			P	S1	/F
Assembled set	LWFF	37	C1	R800		T ₁	P	S1	/FZ
Non-interchangeable specification									
Assembled set	LWFF	37	C1	R800		T ₁	P		/FZ

Note (1) Indicate "LWFF" for the model code of the single track rail of block type LWFS mounting from top.

Identification Number and Specification — Model · Size · Number of Slide Unit ·

1 Model	Linear Way F ⁽¹⁾ (LWF series)	Flange type mounting from top / bottom	: LWFH : LWFF : LWFS
		Block type mounting from top	
For applicable models and sizes, see Table 1. Indicate "LWFF" for the model code of the single track rail of block type LWFS mounting from top. Note ⁽¹⁾ This model has no built-in C-Lube.			
2 Size	33,37,40,42,60,69,90	For applicable models and sizes, see Table 1.	
3 Number of slide units		: C○	For an assembled set, indicates the number of slide units assembled on a track rail. For a single slide unit, only "C1" is specified.
4 Length of track rail		: R○	Indicate the length of track rail in mm. For standard and maximum length, see Table 2.1 and Table 2.2.
5 Material type	High carbon steel made	: No symbol	For applicable models and sizes, see Table 1.
	Stainless steel made	: SL	

Table 1 Models and sizes of LWF series

		below	27	32	37	49
	Maximum length ⁽²⁾		1 600	2 000	1 980	2 000

Notes ⁽¹⁾ This does not apply to female threads for bellows (supplemental code "/J").

⁽²⁾ We can produce products longer than the maximum length. If needed, please contact **IKO**.

Remarks 1. Indicate "LWFF" for the model code of the single track rail of block type LWFS mounting from top.

2. If not directed, E dimensions for both ends will be the same within the range of standard E dimensions. To change the dimensions, indicate the specified rail mounting hole positions "/E" of special specification. For more information, see page III-29.

Table 2.2 Standard and maximum length of stainless steel track rail

Item	Identification number	LWFS33...SL	LWFS37...SL	LWFS42...SL	
Standard length L (n)		120 (3) 200 (5) 320 (8) 480 (12) 560 (14)	150 (3) 250 (5) 400 (8) 500 (10) 600 (12) 800 (16)	180 (3) 240 (4) 360 (6) 480 (8) 660 (11) 840 (14)	
	Pitch of mounting holes F	40	50	60	
	E	20	25	30	
	Standard E dimensions ⁽¹⁾	or higher	7	7	7
		below	27	32	37
	Maximum length ⁽²⁾		1 200	1 200	1 200

Notes ⁽¹⁾ This does not apply to female threads for bellows (supplemental code "/J").

⁽²⁾ We can produce products longer than the maximum length. If needed, please contact **IKO**.

Remarks 1. Indicate "LWFF" for the model code of the single track rail.

2. If not directed, E dimensions for both ends will be the same within the range of standard E dimensions. To change the dimensions, indicate the specified rail mounting hole positions "/E" of special specification. For more information, see page III-29.

—Preload Amount—

6	Preload amount	Standard	: No symbol	Specify this item for an assembled set or a single slide unit.
		Light preload	: T ₁	For details of the preload amount, see Table 3.
		Medium preload	: T ₂	For applicable preload types, see Table 4.

Table 3 Preload amount

Preload type	Item	Preload symbol	Preload amount N	Operational conditions
Standard	(No symbol)	0 ⁽¹⁾	<ul style="list-style-type: none"> Light and precise motion 	
Light preload	T ₁	0.02C ₀	<ul style="list-style-type: none"> Almost no vibrations Load is evenly balanced Light and precise motion 	
Medium preload	T ₂	0.05C ₀	<ul style="list-style-type: none"> Medium vibration Medium overhung load 	

Note ⁽¹⁾ Indicates zero or minimal amount of preload.
 Remark: C₀ indicates the basic static load rating.

Table 4 Application of preload

Size	Preload type (preload symbol)		
	Standard (No symbol)	Light preload (T ₁)	Medium preload (T ₂)
33	○	○	○
37	○	○	○
40	○	○	○
42	○	○	○
60	○	○	○
69	○	○	○
90	○	○	○

Remark: The mark indicates that interchangeable specification products are available.

—Accuracy Class—

7	Accuracy class	High	: H	For interchangeable specification products, assemble a slide unit and a track rail of the same accuracy class.
		Precision	: P	For details of accuracy class, see Table 5.
		Super precision	: SP	For applicable accuracy class, see Table 6.

Table 5 Tolerance and allowance

unit: mm

Item	Class (classification symbol)		
	High (H)	Precision (P)	Super precision (SP)
Dim. H tolerance	±0.040	±0.020	±0.010
Dim. N tolerance	±0.050	±0.025	±0.015
Dim. variation of H ⁽¹⁾	0.015	0.007	0.005
Dim. variation of N ⁽¹⁾	0.020	0.010	0.007
Dim. variation of H for multiple assembled sets ⁽²⁾	0.035	0.025	—
Parallelism in operation of the slide unit C surface to A surface	Based on Fig. 1		
Parallelism in operation of the slide unit D surface to B surface	Based on Fig. 1		

Notes ⁽¹⁾ The value shows variation of slide units incorporated in the same track rail.
⁽²⁾ Applicable to the interchangeable specifications.

Table 6 Application of accuracy class

60	100	—
69	119	131
90	130	—

Remark: The dimensions of the slide unit with scraper at both ends are indicated.

Lubrication

Lithium-soap base grease with extreme-pressure additive (Alvania EP grease 2 [SHOWA SHELL SEKIYU K. K.]) is pre-packed in LWF series.

The LWF series has grease nipple as indicated in Table 15. Supply nozzles matching the size of grease nipple are also available. For order of these parts for lubrication, see Table 15.1 on page -22 and Table 16 on page III-23.

Table 15 Parts for lubrication

Size	Grease nipple type ⁽¹⁾	Applicable supply nozzle type	Bolt size of female threads for piping
33	A-M3	A-5120V A-5240V	—
37	A-M4	B-5120V B-5240V	M4
40	JIS type 1	Grease gun available on the market	M6
42	B-M6		
60	JIS type 1		
69	B-M6		
90	JIS type 1		

Note ⁽¹⁾ For grease nipple specification, see Table 15.1 and Table 15.2 on page III-22.

Dust Protection

The slide unit of LWF series are equipped with end seals as standard for dust protection. However, if large amount of contaminant or dust are floating, or if large particles of foreign substances such as chips or sand may adhere to the track rail, it is recommended to cover the whole unit with bellows or telescope type shield, etc.

The LWF series is provided with specific bellows. The bellows are easy to mount and provide excellent dust protection. If needed, please refer to III-25 for ordering.

Precaution for Use

① Mounting surface, reference mounting surface and typical mounting structure

When mounting the LWF series, properly align the reference mounting surface B and D of the track rail and slide unit with the reference mounting surface of the table and bed and fix it. (See Fig. 3.)

The reference mounting surfaces B and D and mounting surfaces A and C are precisely ground. Machining the mounting surface of the table and bed, such as machine or device, to high accuracy and mounting them properly will ensure stable linear motion with high accuracy.

Reference mounting surface of the slide unit is the opposite side of the **IKO** mark. The track rail reference mounting surface is identified by locating the **IKO** mark on the top surface of the track rail. It is the side surface above the mark (in the direction of the arrow). (See Fig. 4)

Fig. 3 Reference mounting surface and typical mounting structure

Fig. 4 Reference mounting surface

② Corner radius and shoulder height of reference mounting surfaces

For the opposite corner of the mating reference mounting, it is recommended to have relieved fillet as indicated in Fig. 5. Table 17.1 and Table 17.2 shows recommended shoulder heights and corner radius of the mating reference mounting surfaces.

Fig. 5 Corner of the mating reference mounting

③ Tightening torque for fixing screw

Typical tightening torque for mounting of the LWF series to the steel mating member material is indicated in Table 16. When vibration and shock of the machine or device are large, fluctuating load is large, or moment load is applied, fix it by using the torque 1.2 to 1.5 times larger than the value indicated in the table as necessary. If the mating member material is cast iron or aluminum, reduce the tightening torque depending on the strength characteristic of the mating member material.

Table 16 Tightening torque for fixing screw

Bolt size	Tightening torque N · m	
	High carbon steel-made screw	Stainless steel-made screw
M 3×0.5	1.7	—
M 4×0.7	4.0	2.5
M 5×0.8	7.9	5.0
M 6×1	13.3	8.5
M 8×1.25	32.0	—
M10×1.5	62.7	—

Remark: The calculation is based on the tightening torque, strength division 12.9 and property division A2-70.

Table 17.1 Shoulder height and corner radius of the reference mounting surface

Size	Mounting part of slide unit		Mounting part of track rail	
	Shoulder height h_1	Corner radius R (Maximum)	Shoulder height h_2	Corner radius R (Maximum)

LWFS 42...SL	○																															

Notes (1) Track rail lengths L are shown in Tables 2.1 and 2.2 on page II-116.
 (2) The appended track rail mounting bolts are hexagon socket head bolts equivalent to JIS B 1176. For stainless steel model, stainless steel bolts are appended.
 (3) Basic dynamic load rating (C), Basic static load rating (C_0), static moment rating (T_0 , T_x , and T_y) are values for the direction indicated in the following figure.
 The upper values of T_x and T_y are for one slide unit and the lower values are for two slide units in close contact.
 (4) The shapes of grease nipple vary by size. For details of the specifications, see Table 15 on page II-124.

MUL • LWU

C-Lube Linear Way MUL

MUL

long term maintenance free supported!

The aquamarine end plate is the symbol of maintenance free.

Linear Way U
LWU

Points

1 Original U-shaped track rail

MUL and LWU series are the linear motion rolling guides adopting the U-shaped track rail to greatly increase rigidity of track rail under moment load and torsion.

2 Expanded freedom of design for use as a structure beam

Because of the high rigidity of the track rail, the track rail can be used as a structure beam, such as a cantilever or both-end support in the machine and equipment. Therefore, freedom of design is expanded for user.

3 Additional machining available for corresponding to needs

High carbon steel track rail can be machined additionally to fix mechanical components such as a driving mechanism on the track rail directly at user.

4 Stainless steels superior in corrosion resistance are listed on lineup.

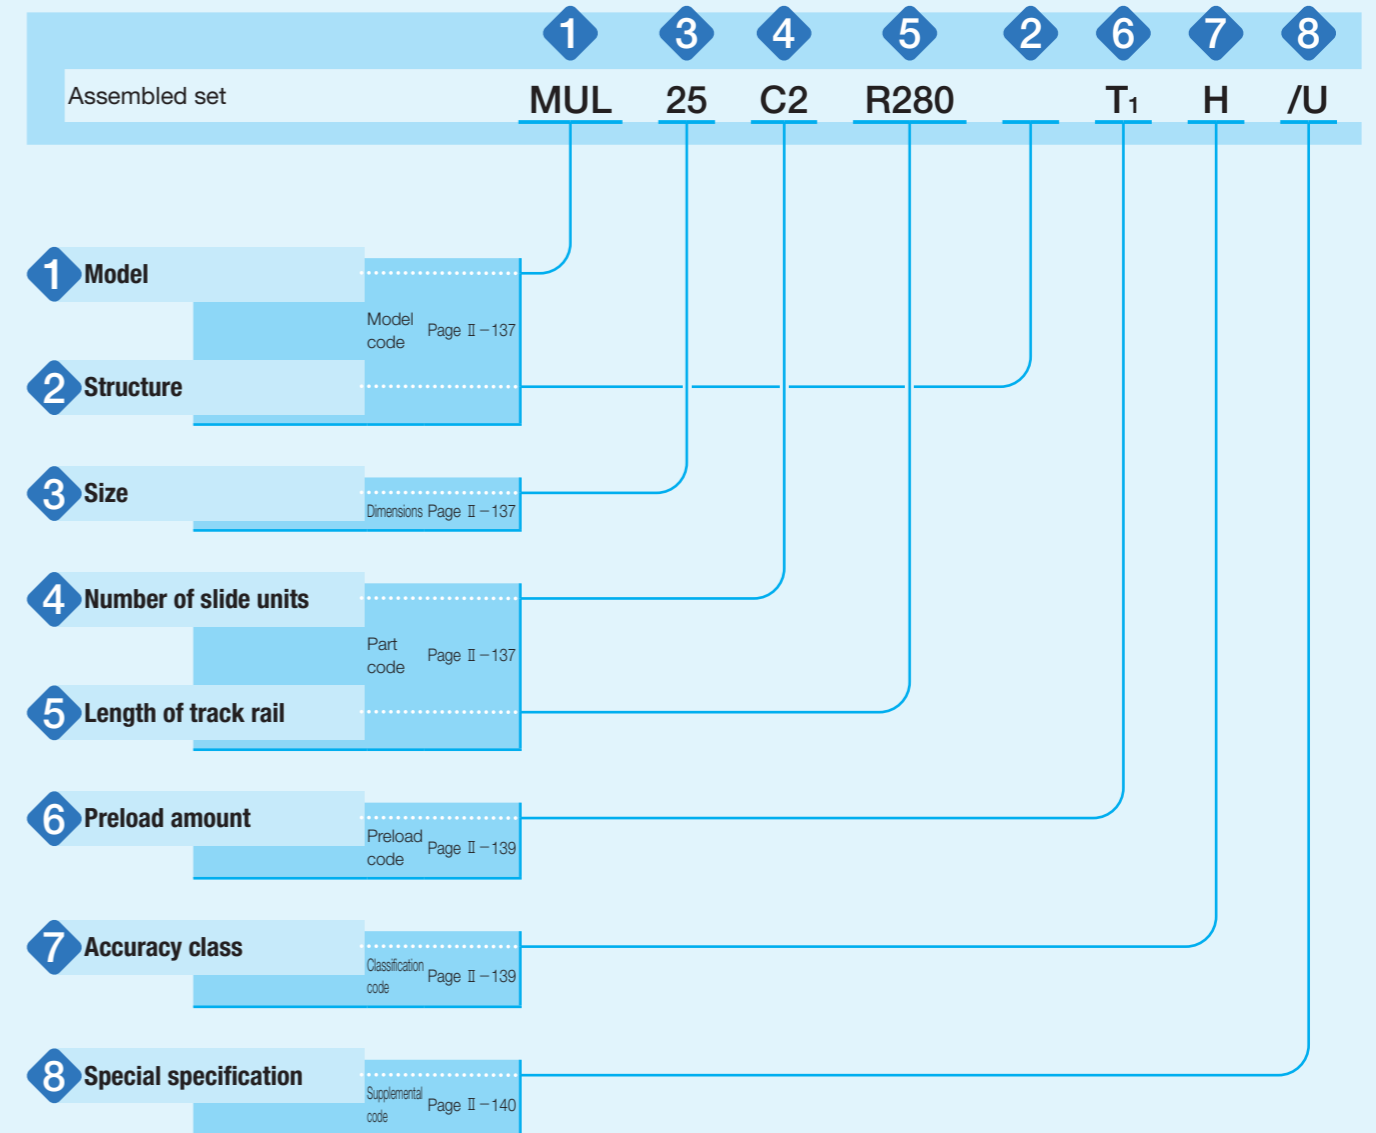

For details [P.I-41](#)

The main metal components made of corrosion-resistant stainless steel are available for small size of 25 mm and 30 mm of track rail width. They are suitable for applications where rust prevention oil is not preferred, such as in a cleanroom environment.

Identification Number and Specification

Example of an identification number

The specifications of MUL and LWU series are indicated by the identification number. Indicate the identification number, consisting of a model code, dimensions, a part code, a preload symbol, a classification symbol, and a supplemental code for each specification to apply.

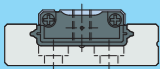

MUL • LWU

Identification Number and Specification — Model · Structure · Size · Number of Slide unit ·

1 Model	C-Lube Linear Way MUL (MUL series)	Small type	: MUL
	Linear Way U ⁽¹⁾ (LWU series)	Small type Standard type	: LWUL : LWU
For applicable models and sizes, see Table 1.			
Note ⁽¹⁾ This model has no built-in C-Lube.			
2 Structure	Ball retained type	: B	For applicable models and sizes, see Table 1.
	Ball non-retained type	: No symbol	
3 Size	25,30,40,50,60,86,100,130	For applicable models and sizes, see Table 1.	
4 Number of slide units	: C○	Indicates the number of slide units assembled on a track rail.	
5 Length of track rail	: R○	Indicate the length of track rail in mm. For standard and maximum lengths, see Table 2.

Moment of Inertia of Sectional Area

High rigidity design of C-Lube linear way MUL and LWU are achieved by adopting a U-shaped track rail. The moment of inertia of sectional area of track rails are shown in Table 9.

Table 9 Moment of inertia of sectional area of track rails

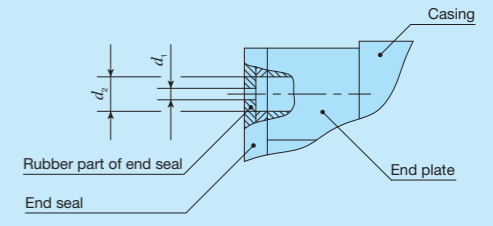

Identification number	Moment of inertia of sectional area mm^4		Center of gravity e mm	
	I_x	I_y

Lubrication

In the series of size 25 and 30 of MUL series and LWU series, lithium-soap base grease (MULTEMP PS No.2, KYODO YUSHI) is pre-packed, and in the series of size 40 to 130, lithium-soap base grease containing extreme-pressure additive (Alvania EP grease 2, SHOWA SHELL SEKIYU K. K.) is pre-packed. Additionally, MUL series has C-Lube placed in the recirculation part of balls, so that the interval for reapplying lubricant can be extended and maintenance works such as grease job can be reduced significantly.

The MUL series and LWU series have grease nipple or oil hole as indicated in Table 11. Supply nozzles fit to each shapes of grease nipple and dedicated supplying equipment (miniature greasers) fit to oil holes are also available. For these parts for lubrication, refer to Table 14 and Table 15.1 on page III-22, and Table 16 on page III-23 if required.

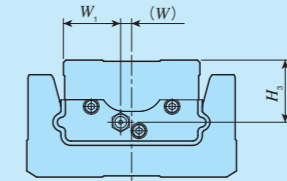

Table 10 Oil hole specifications

unit: mm

Size	d_1	d_2
25	0.5	1.2
30		1.5

Table 11 Lubrication parts and position of grease nipple

Size	Grease nipple type ⁽¹⁾	Applicable supply nozzle type	Bolt size of female threads for piping	Grease nipple position mm		
				W_1	W	H_3
25	Oil hole	Miniature greaser	—	7	0	2.9
30				9	0	3.75
40	A-M4	A-5120V	M4	13	0	10.5
50		B-5120V		17	0	13.5
60	JIS type 1	Grease gun available on the market	M6	19	0	14.5
86				23.5	4.5	25.5
100				28.5	4	29
130				44	0	35.5

Note ⁽¹⁾ For specifications of grease nipple, refer to Tables 15.1 and 15.2 on page III-22.

Dust Protection

The slide units of MUL series and LWU series are dust protected by end seals and upper seals as standard. However, if large amount of contaminant or dust are floating, or if large particles of foreign substances such as chips or sand may adhere to the track rail, it is recommended to attach a protective cover to the linear motion mechanism.

Precaution for Use

① Mounting surface, reference mounting surface and typical mounting structure

When mounting the MUL series and LWU series, properly align the reference mounting surfaces B and D of the track rail and slide unit with the reference mounting surface of the table and bed and fix them. (See Fig. 2)

The reference mounting surfaces B and D and mounting surfaces A and C are precisely ground. Machining the mounting surface of the table and bed, such as machine or device, to high accuracy and mounting them properly will ensure stable linear motion with high accuracy.

Reference mounting surfaces of slide unit and track rail of the MUL series and LWU series are the opposite side of the **IKO** mark. (See Fig. 3)

Fig. 2 Reference mounting surface and typical mounting structure

Fig. 3 Reference mounting surface

② Corner radius and shoulder height of reference mounting surfaces

For the opposite corner of the mating reference mounting, it is recommended to have relieved fillet as indicated in Fig. 4. Recommended value for the shoulder height on the mating side is indicated in Table 13.

Fig. 4 Corner of the mating reference mounting

③ Tightening torque for fixing screw

Typical tightening torques for mounting of the MUL series and LWU series to the steel mating member material are indicated in Table 12. When vibration and shock of the machine or device are large, fluctuating load is large, or moment load is applied, fix it by using the torque 1.2 to 1.5 times larger than the value indicated in the table as necessary. If the mating member material is cast iron or aluminum, reduce the tightening torque depending on the strength characteristic of the mating member material.

Table 12 Tightening torque for fixing screw

Bolt size	Tightening torque N · m	
	Stainless steel-made screw	High carbon steel-made screw
M 2.5×0.45	0.62	—
M 3 ×0.5	1.1	1.7
M 4 ×0.7	2.5	4.0
M 5 ×0.8	—	7.9
M 6 ×1	—	13.3
M 8 ×1.25	—	32.0
M10 ×1.5	—	62.7

Note (1) The calculation is based on the tightening torque, strength division 12.9 and property division A2-70.

Table 13 Shoulder height and corner radius of the reference mounting surface

unit: mm

Size	Mounting part of slide unit		Mounting part of track rail	
	Shoulder height h_1	Corner radius R_1 (Maximum)	Shoulder height h_2	Corner radius R_2 (Maximum) (1)
25	1.5	0.2	2.5	—
30	2.5	0.2	3	—
40	3	0.5	5	1
50	3	0.5	7	2
60	3	0.5	9	2
86	4	0.5	11	2
100	4	0.5	13	1
130	5	1	14	2

Note (1) In sizes 25 and 30, provide a relieved fillet as shown in Fig. 4.

Notes (1) Track rail lengths L are shown in Table 2 on page II-138.
 (2) The steel ball is not retained.
 (3) The appended track rail mounting bolts are hexagon socket head bolts equivalent to JIS B 1176 or cross-recessed head screw for precision equipment. For the size 25 and 30 series, stainless steel bolts are appended. Track rail mounting bolts are not appended for MUL series.
 (4) Basic dynamic load rating (C), Basic static load rating (C_0), static moment rating (T_0 , T_x , and T_y) are values for the direction indicated in the following figure.
 The upper values of T_x and T_y are for one slide unit and the lower values are for two slide units in close contact.
 (5) The shapes of grease nipple vary with size. For details of specifications, see Table 11 on page II-142.
 Remark: For the specification of oil hole, see Table 10 on page II-142.

C-Lube Linear Roller Way Super MX Linear Roller Way Super X

C-Lube Linear Roller Way Super MX

MX

long term maintenance free supported!

The aquamarine end plate is the symbol of maintenance free.

Points

- **Roller type linear motion rolling guides having the highest level of rolling guide performance** For details ➔ P.I-21

Linear motion rolling guide that has achieved the highest level of performance in all characteristics, including load capacity, rigidity, friction characteristics and accuracy, brought about by utilizing the roller's excellent characteristic.

- **Wide range of variations for your needs** For details ➔ P.I-28

A wide variety of products, including five types of different slide unit shape such as the flange type, low section flange type with low cross sectional height and low section block type, etc., and four types of different slide unit length with varying lengths with same section are available. You can select an optimal product for the specifications of your machine and device.

- **Extra long unit** For details ➔ P.I-29

Extra long slide unit series having the length 1.4 to 1.5 times of standard type is now available. With more rollers built into the slide units, the new series not only have the enhanced load capacity and rigidity but also exhibit super accuracy running performance.

- **Stainless steels superior in corrosion resistance are listed on lineup.** For details ➔ P.I-41

A series of stainless steel products is available from the miniature size of track rail width 10 mm. They are highly corrosion-resistant and suitable for applications where rust prevention oil is not preferred, such as in cleanroom environment.

- **Easy replacement from ball type** For details ➔ P.I-24

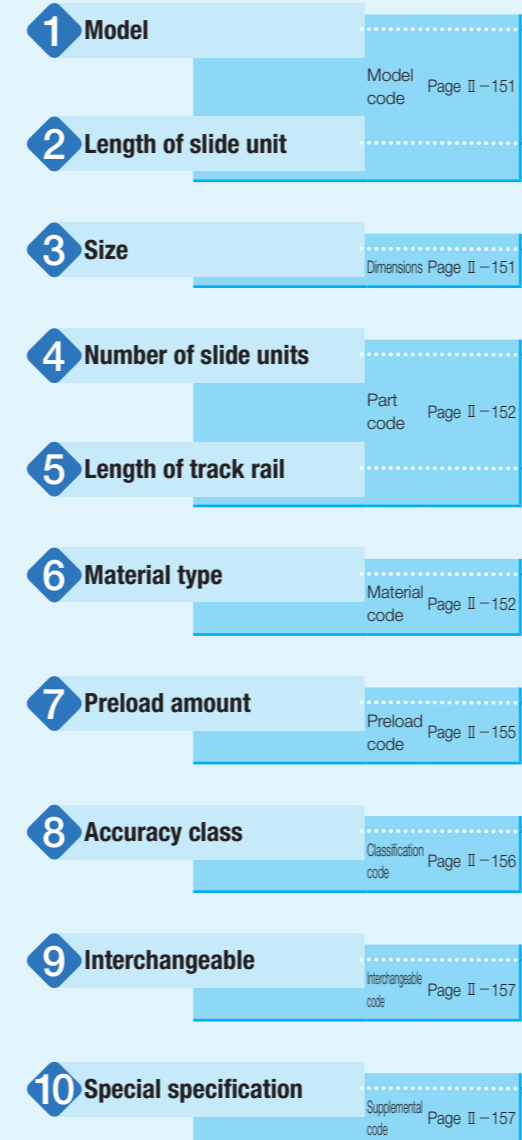

Mounting dimensions are compatible with MH / LWH series of ball type. Therefore, replacement to roller type is possible without major design changes of machine and device.

Identification Number and Specification

Example of an identification number

The specifications of MX and LRX series are indicated by the identification number. Indicate the identification number, consisting of a model code, dimensions, a part code, a material code, a preload symbol, a classification symbol, an interchangeable code, and a supplemental code for each specification to apply.

Interchangeable specification	1	2	3	4	5	6	7	8	9	10
Single slide unit	MX	G	15	C1			T ₁	P	S1	/Z
Single track rail ⁽¹⁾	LRX		15		R240			P	S1	
Assembled set	MX	G	15	C2	R240		T ₁	P	S1	/Z
Non-interchangeable specification										
Assembled set	MX	G	15	C2	R240		T ₁	P		/Z

Note ⁽¹⁾ Indicate "LRX" for the model code of single track rail regardless of the series and the slide unit model to be combined.

Identification Number and Specification — Model · Length of Slide Unit · Size —

1 Model

C-Lube Linear Roller Way Super MX (MX series) Flange type mounting from top / bottom : MX ⁽²⁾

 Compact block type mounting from top : LRXS

For applicable models and sizes, see Table 1.1 and Table 1.2.
 Indicate "LRX" for the model code of the single track rail regardless of the series and the combination of slide unit models.

Notes ⁽¹⁾ This model has no built-in C-Lube.
⁽²⁾ Series of size 20 can only be mounted by the bolts from top. The models with the same dimensions allowing mounting from bottom are "MXH" and "LRXH."

2 Length of slide unit

Short : C For applicable models and sizes, see Table 1.1 and Table 1.2.
 Standard : No symbol
 Long : G
 Extra long : L

3 Size

10, 12, 15, 20, 25, 30, 35, 45, 55, 65, 85, 100 For applicable models and sizes, see Table 1.1 and Table 1.2.

Table 1.1 Models and sizes of MX and LRX series

Material	Shape	Slide unit Length	Model	Size											
				10	12	15	20	25	30	35	45	55	65	85	100
High carbon steel made	Flange type mounting from top / bottom	Short	MXC	-	○	○	○ ⁽¹⁾	○	○	○	○	○	○	-	-
			LRXC	-	○	○	○ ⁽¹⁾	○	○	○	○	○	○	-	-
		Standard	MX	-	○	○	○ ⁽¹⁾	○	○	○	○	○	○	-	-

			LRXG	-	○	○	○ ⁽¹⁾	○	○	○	○	○	○	-	-
	Extra long	MXL	-	-	-	○ ⁽¹⁾	○	○	○	○	○	○	-	-	
		LRXL	-	-	-	-	-	-	-	-	-	○	-	-	
	Block type mounting from top	Short	MXDC	-	○	○	○	○	○	○	○	○	○	-	-
			LRXDC	-	○	○	○	○	○	○	○	○	○	-	-
		Standard	MXD	-	○	○	○	○	○	○	○	○	○	-	-
			LRXD	-	○	○	○	○	○	○	○	○	○	-	-
		Long	MXDG	-	○	○	○	○	○	○	○	○	○	-	-
			LRXDG	-	○	○	○	○	○	○	○	○	○	-	-
Extra long	MXDL	-	-	-	○	○	○	○	○	○	○	-	-		

Note ⁽¹⁾ MXC20, MX20, MXG20, MXL20, LRXC20, LRX20 and LRXG20 can only be mounted by the bolts from top.
 The models with the same dimensions allowing mounting from bottom are MXHC20, MXH20, MXHG20, MXHL20, LRXHC20, LRXH20 and LRXHG20.
 Remark: For the models indicated in , the interchangeable specification is available.

— Number of Slide Unit · Length of Track Rail · Material Type —

4 Number of slide units : C○ For an assembled set, indicates the number of slide units assembled on a track rail. For a single slide unit, only "C1" is specified.

5 Length of track rail : R○ Indicate the length of track rail in mm. For the standard and maximum lengths, see Table 2.1, Table 2.2, Table 2.3 and Table 2.4.

6 Material type High carbon steel made : No symbol For applicable models and sizes, see Table 1.1 and Table 1.2.
 Stainless steel made : SL

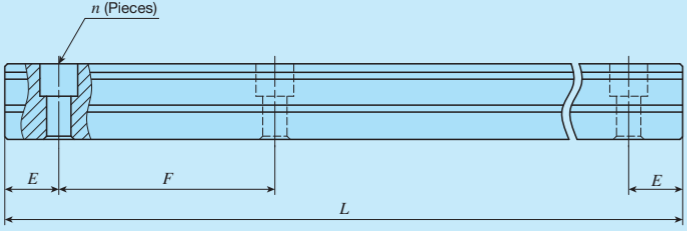

Table 1.2 Models and sizes of MX and LRX series

Material	Shape	Slide unit Length	Model	Size											
				10	12	15	20	25	30	35	45	55	65	85	100

E		52.5	60	75	90	75
Standard E dimensions (1)	or higher	12.5	15	17	23	29
	below	65	75	92	113	104
Maximum length (2)		2 940 (3 990)	3 000 (3 960)	3 000 (3 900)	2 880	3 000

Notes (1) This does not apply to female threads for bellows (Supplemental code "/J").

(2) Length up to the value in () can be produced. If needed, please contact **IKO**.

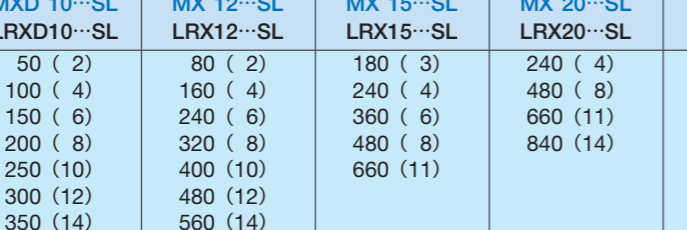

Remarks 1. A typical identification number is indicated, but is applied to all models of the same size.

2. Indicate "LRX" for the model code of the single track rail regardless of the series and the combination of slide unit models.

3. In the case where track rail mounting hole is half pitch specification (Supplemental code "/HP"), see Table 2.3.

4. If not directed, E dimensions for both ends will be the same within the range of standard E dimensions. To change the dimensions, indicate the specified rail mounting hole positions "/E" of special specification. For more information, see page III-29.

	below	15.5	22	23	24	30
Maximum length (2)		1 000 (1 480)	1 200 (1 980)	1 200 (1 980)	1 200 (1 980)	1 200 (2 000)

Notes (1) This does not apply to female threads for bellows (Supplemental code "/J").

(2) Length up to the value in () can be produced. If needed, please contact **IKO**.

Remarks 1. A typical identification number is indicated, but is applied to all models of the same size.

2. Indicate "LRX" for the model code of the single track rail regardless of the series and the combination of slide unit models.

3. If not directed, E dimensions for both ends will be the same within the range of standard E dimensions. To change the dimensions, indicate the specified rail mounting hole positions "/E" of special specification. For more information, see page III-29.

—Preload Amount—

7 Preload amount	Standard	: No symbol	Specify this item for an assembled set or a single slide unit.
	Light preload	: T ₁	For details of the preload amount, see Table 3.
	Medium preload	: T ₂	For details of the preload amount, see Table 3.
	Heavy preload	: T ₃	For applicable preload types, see Table 4.

Table 3 Preload amount

Preload type	Item	Preload symbol	Preload amount N	Operational conditions
Standard	(No symbol)		0 ⁽¹⁾	• Light and precise motion
Light preload	T ₁		0.02 C ₀	• Almost no vibrations • Load is evenly balanced • Light and precise motion
Medium preload	T ₂		0.05 C ₀	• Medium vibration • Medium overhung load
Heavy preload	T ₃		0.08 C ₀	• Operation with vibration and/or shock • Overhanging load applied • Heavy cutting

Note ⁽¹⁾ Indicates zero or minimal amount of preload.
Remark: C₀ indicates the basic static load rating.

Table 4 Application of preload

Size	Preload type (preload symbol)			
	Standard (No symbol)	Light preload (T ₁)	Medium preload (T ₂)	Heavy preload (T ₃)
10	○	○	—	—
12	○	○	○	○
15	○	○	○	○
20	○	○	○	○
25	○	○	○	○
30	○	○	○	○
35	○	○	○	○
45	○	○	○	○
55	○	○	○	○
65	○	○	○	○
85	○	○	○	○
100	○	○	○	○

Remark: The mark indicates that interchangeable specification products are available.

—Accuracy Class—

8 Accuracy class	High	: H	For interchangeable specification products, assemble a slide unit and a track rail of the same accuracy class.
	Precision	: P	For details of accuracy class, see Table 5.
	Super precision	: SP	For details of accuracy class, see Table 5.
	Ultra precision	: UP	For applicable accuracy class, see Table 6.

Table 5 Tolerance and allowance

Item	Class (classification symbol)			
	High (H)	Precision (P)	Super precision (SP)	Ultra precision (UP)
Dim. H tolerance	±0.040	±0.020	±0.010	±0.008
Dim. N tolerance	±0.050	±0.025	±0.015	±0.010
Dim. variation of H ⁽¹⁾	0.015	0.007	0.005	0.003
Dim. variation of N ⁽¹⁾	0.020	0.010	0.007	0.003
Dim. variation of H for multiple assembled sets ⁽²⁾	0.035	0.025	—	—
Parallelism in operation of the slide unit C surface to A surface	See Fig. 1			
Parallelism in operation of the slide unit D surface to B surface	See Fig. 1			

Notes ⁽¹⁾ It means the size variation between slide units mounted on the same track rail.
⁽²⁾ Applicable to the interchangeable specification.

Table 6 Application of accuracy class

Size	Class (classification symbol)			
	High (H)	Precision (P)	Super precision (SP)	Ultra precision (UP)
10	○	○	○	○
12	○	○	○	○
15	○	○	○	○
20	○	○	○	○
25	○	○	○	○

45	○	○	○	○
55	○	○	○	○
65	○	○	○	○
85	○	○	○	○
100	○	○	○	○

Remark: The mark indicates that interchangeable specification products are available.

Fig. 1 Parallelism in operation

9 Interchangeable	S1 specification	: S1	This is specified for the interchangeable specifications.
	S2 specification	: S2	Assemble a track rail and a slide unit with the same interchangeable code. Performance and accuracy of "S1" and "S2" are the same.
	Non-interchangeable specification	: No symbol	For applicable models and sizes, see Table 1.1 and Table 1.2. "No symbol" is indicated for non-interchangeable specification.
10 Special specification	/A, /D, /E, /F, /GE, /HP, /I, /JO, /LO, /LFO, /MA, /MN, /N, /PS, /Q, /RCO, /T, /UR, /VO, /WO, /YO, /ZO		For applicable special specifications, see Tables 7.1, 7.2, 7.3, and 7.4. For combination of multiple special specifications, see Table 8. For details of special specifications, see page III-28.

Table 7.1 Application of special specifications (Interchangeable specification, single slide unit)

Special specification	Supplemental code	Size											
		10	12	15	20	25	30	35	45	55	65	85	100
Changed pitch of slide unit middle mounting holes ⁽¹⁾	/GE	–	×	○	○	○	○	○	○	○	○	–	–
Female threads for bellows ⁽²⁾	/JO	–	×	○	○	○	○	○	○	○	○	–	–

2. A typical identification number is indicated, but is applied to all models of the same size.

Lubrication

Lithium-soap base grease with extreme-pressure additive (Alvania EP grease 2 [SHOWA SHELL SEKIYU K. K.]) is pre-packed in MX series and LRX series. Additionally, MX series has C-Lube placed in the recirculation part of cylindrical roller, so that the interval for reapplying lubricant can be extended and maintenance works such as grease job can be reduced significantly.

The MX series and LRX series have grease nipple or oil hole as indicated in Table 15. Supply nozzles fit to each shapes of grease nipple and dedicated supplying equipment (miniature greasers) fit to oil holes are also available. When these parts are desired, refer to Table 14 and Table 15.1 in III-22 and Table 16 of page III-23 to order.

Fig. 2 Oil hole specifications of LRXD10...SL

Table 15 Parts for lubrication

Size	Grease nipple type ⁽¹⁾	Applicable supply nozzle type	Bolt size of female threads for piping
10	Oil hole	Miniature greaser	—
12	A-M3	A-5120V A-5240V	—
15 ⁽²⁾	A-M4	B-5120V B-5240V	M4
20 ⁽²⁾	B-M4	A-8120V B-8120V	
25 ⁽²⁾			Grease gun available on the market
30 ^{(3) (4)}	B-M6		
35 ⁽⁵⁾	JIS1 type		
45 ⁽⁶⁾	JIS2 type	Grease gun available on the market	PT1/8
55			
65			
85	A-PT1/4	Grease gun available on the market	PT1/4
100			

Notes ⁽¹⁾ For grease nipple specification, see Table 15.1 and Table 15.2 in page III-22.

⁽²⁾ The grease nipple when female threads for bellows (supplemental code "J") is specified is A-M3.

⁽³⁾ The grease nipple when female threads for bellows (supplemental code "J") is specified is A-M4.

⁽⁴⁾ The grease nipple for MXN30 is B-M4. The grease nipple when female threads for bellows (supplemental code "J") is specified is A-M4.

⁽⁵⁾ The grease nipple mounting screw for MXN35 is made smaller along the movement direction of the slide unit than the right / left direction. When the grease nipple is mounted along the movement direction, contact **IKO**.

⁽⁶⁾ The grease nipple for MXN45 is JIS type1.

Dust Protection

The slide units of MX series and LRX series are equipped with end seals and under seals as standard for dust protection. However, if large amount of contaminant or dust are floating, or if large particles of foreign substances such as chips or sand may adhere to the track rail, it is recommended to cover the entire unit with bellows, telescopic shields, etc.

MX series and LRX series are provided with specific bellows. The bellows are easy to mount and provide excellent dust protection. If you need these units, please refer to III -25 for ordering.

Also the cover end tape to cover the mounting hole of track rail (Fig. 3) and track rail mounting from bottom with no mounting hole on the upper surface (Fig.4) are available. If needed, please contact **IKO**.

Fig. 3 Rail cover sheet

Fig. 4 Track rail mounting from bottom

Precaution for Use

1 Mounting surface, reference mounting surface and typical mounting structure

When mounting the MX series and LRX series, properly align the reference mounting surfaces B and D of the track rail and slide unit with the reference mounting surface of the table and bed and fix them. (See Fig. 5.)

The reference mounting surfaces B and D and mounting surfaces A and C are precisely ground. Machining the mounting surface of the table and bed, such as machine or device, to high accuracy and mounting them properly will ensure stable linear motion with high accuracy.

Reference mounting surface of the slide unit is the opposite side of the **IKO** mark. The track rail reference mounting surface is identified by locating the **IKO** mark on the top surface of the track rail. It is the side surface above the mark (in the direction of the arrow). (See Fig. 6.)

Fig. 5 Reference mounting surface and typical mounting structure

Fig. 6 Reference mounting surface

2 Fixing the slide unit

Slide unit is also provided with mounting screws in the middle of width direction (see Fig.7) and some products has the arrangement to receive the applied load in a good balance. When ordering machines or equipment, consider the arrangement so that the mounting holes in the middle of slide unit can also be used to fix the units, to use the highest performance out of the product.

To fix the slide unit of compact block type or low section block type, we recommend to secure the fixing thread depth of Table 16.1 and Table 16.2. Also, with the low section flange type and low section block type, make sure that the fixing thread depth for the mounting screw in the middle of slide unit width direction is less than the maximum fixing thread depth of the dimension table.

Fig. 7 Slide unit middle mounting hole

Table 16.1 Fixing thread depth for slide unit mounting hole of compact block type unit: mm

Identification number	Recommended minimum fixing thread depth	
MXS 15	LRXS 15	4.5
MXS 20	LRXS 20	5.5
MXS 25	LRXS 25	7
MXS 30	LRXS 30	9

Remark: A typical identification number is indicated, but is applied to all compact block types of the same size.

Table 16.2 Fixing thread depth for slide unit mounting hole of low section block type unit: mm

Identification number	Recommended minimum fixing thread depth
MXNS 30	8
MXNS 35	8.5
MXNS 45	10.5
MXNS 55	14

Remark: A typical identification number is indicated, but is applied to all low section block types of the same size.

3 Shoulder height and corner radius of the reference mounting surface

For the opposite corner of the mating reference mounting, it is recommended to have relieved fillet as indicated in Fig. 8, but you may also use it with providing radius R at the corner as shown in Table 17. Recommended value for the shoulder height on the mating side is indicated in Table 17.

Fig. 8 Corner of the mating reference mounting

Table 17 Shoulder height and corner radius of the reference mounting surface

unit: mm

Size	Shoulder height of slide unit mounting part h_1	Shoulder height of track rail mounting part h_2	Corner radius R (Maximum)
10	4	1	0.3
12	4	2	0.5
15	4	3	0.5
20	5	4	0.5
25	6	5	1
30	8	5.5	1
35	8	5.5	1
45	8	7	1.5
55	10	8	1.5
65	10	10	1.5
85	14	14	2.5 (Slide unit) 1.5 (Track rail)
100	14	13	2.5

4 Tightening torque for mounting bolts

Typical tightening torques for mounting of the MX series and LRX series to the steel mating member material are indicated in Table 18. When vibration and shock of the machine or device are large, fluctuating load is large, or moment load is applied, fix it by using the torque 1.2 to 1.5 times larger than the value indicated in the table as necessary. If the mating member material is cast iron or aluminum, reduce the tightening torque depending on the strength characteristic of the mating member material.

Table 18 Tightening torque for fixing screw

Bolt size	Tightening torque N · m	
	High carbon steel-made screw	Stainless steel-made screw
M 2.6×0.45	—	0.70
M 3 ×0.5	1.7	1.1

Remarks 1. The calculation is based on the tightening torque, strength division 12.9 and property division A2-70.

2. It is recommended that the tightening torque of slide unit middle mounting holes for size 15, 20, 25, 30, 35 of flange type (MXC, MX, MXG, MXL, LRXC, LRX, LRXG) is to be 70 to 80 % of the values in the table.

Notes (1) Length of track rail L is shown in Table 2.1 on page II-153 and Table 2.3 on page II-154 .
 (2) The mounting bolt can be mounted only in downward direction. The models with the same dimensions allowing mounting from bottom are MXHC20, MXH20, MXHG20, MXHL20, LRXHC20, LRXH20, and LRXHG20.
 (3) The appended track rail mounting bolts are hexagon socket head bolts equivalent to JIS B 1176. In an assembled set of MX series, track rail mounting bolts are not appended.
 (4) Basic dynamic load rating (C), basic static load rating (C₀), static moment rating (T₀, T_x, and T_y) are values for the direction indicated in the following figure.
 The upper values of T_x and T_y are for one slide unit and the lower values are for two slide units in close contact.
 (5) The shapes of grease nipple vary by size. For details of the specifications, see Table 15 on page II-166.
 Remark: A grease nipple mounting screw is provided on the right and left end plates respectively.

Notes (1) Length of track rail L is shown in Tables 2.1 and 2.2 on page II-153 and Tables 2.3 and 2.4 on page II-154.
 (2) The appended track rail mounting bolts are hexagon socket head bolts equivalent to JIS B 1176. For stainless steel model, stainless steel bolts are appended.
 In an assembled set of MX series, track rail mounting bolts are not appended.
 (3) Basic dynamic load rating (C), basic static load rating (C_0), static moment rating (T_0 , T_x , and T_y) are values for the direction indicated in the following figure.
 The upper values of T_x and T_y are for one slide unit and the lower values are for two slide units in close contact.
 (4) The shapes of grease nipple vary by size. For details of the specifications, see Table 15 on page II-166.
 Remark: A grease nipple mounting screw is provided on the right and left end plates respectively.

Notes (1) Length of track rail L is shown in Table 2.1 on page II-153 and Table 2.3 on page II-154.

(2) The fixing thread depth of mounting screw in the middle of the way in the slide unit width direction should be less than the maximum fixing thread depth.

(3) Track rail mounting bolts are not appended.

(4) Basic dynamic load rating (C), basic static load rating (C₀), static moment rating (T₀, T_x, and T_y) are values for the direction indicated in the following figure.

The upper values of T_x and T_y are for one slide unit and the lower values are for two slide units in close contact.

(5) The shapes of grease nipple vary by size. For details of the specifications, see Table 15 on page II-166.

Remarks 1. For size 30 series, a grease nipple mounting screw is provided on the right and left end plates respectively.

2. For size 35, 45, and 55 series, three grease nipple mounting screws are provided on the right and left end plates respectively.

However, the size of screw for size 35 in the slide unit travelling direction is smaller than that of the crosswise direction.

When the grease nipple is mounted along the movement direction, contact **IKO**.

MXNSL 55	55	-	○	6.28		292	150	228																									17.5	M12 x 15	19	16	53	43

- Notes (1) Length of track rail L is shown in Table 2.1 on page II-153 and Table 2.3 on page II-154.
- (2) For the fixing thread depth of the slide unit mounting hole, the value indicated in Table 16.2 on page II-168 is recommended. The fixing thread depth of mounting screw in the middle of the way in the slide unit width direction should be less than the maximum fixing thread depth.
- (3) Track rail mounting bolts are not appended.
- (4) Basic dynamic load rating (C), basic static load rating (C_0), static moment rating (T_0 , T_x , and T_y) are values for the direction indicated in the following figure. The upper values of T_x and T_y are for one slide unit and the lower values are for two slide units in close contact.
- (5) The shapes of grease nipple vary by size. For details of the specifications, see Table 15 on page II-166.

Remarks 1. For size 30 series, a grease nipple mounting screw is provided on the right and left end plates respectively.
 2. For size 35, 45, and 55 series, three grease nipple mounting screws are provided on the right and left end plates respectively. However, the size of screw for size 35 in the slide unit travelling direction is smaller than that of the crosswise direction. When the grease nipple is mounted along the movement direction, contact IKO.

Identification Number and Specification

Example of an identification number

The specification of LRWX series is indicated by the identification number. Indicate the identification number, consisting of a model code, dimensions, a part code, a preload symbol, a classification symbol, and a supplemental code for each specification to apply.

Identification Number and Specification – Model · Size · Number of Slide Unit · Length of Track Rail –

1 Model	Linear Roller Way X ⁽¹⁾ (LRWX series)	Block type mounting from top : LRWX...B Flange type mounting from bottom : LRWXH
	For applicable models and sizes, see Table 1. Note ⁽¹⁾ This model has no built-in C-Lube.	
2 Size	25,35,45,55,75	For applicable models and sizes, see Table 1.
3 Number of slide units	: C○	Indicates the number of slide units assembled on a track rail.
4 Length of track rail	: R○	Indicate the length of track rail in mm. For standard and maximum lengths, see Table 2.

Table 1 Models and sizes of LRWX series

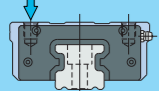

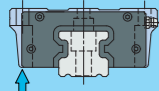

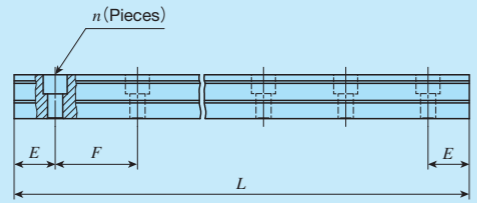

Shape	Model	Size				
		25	35	45	55	75
Block type mounting from top 	LRWX...B	○	○	○	○	○
Flange type mounting from bottom 	LRWXH	—	○	○	○	○

Table 2 Standard and maximum lengths of track rail

Item	Identification number	LRWX25...B	LRWX25...B/HP ⁽³⁾	LRWX 35...B LRWXH35	LRWX 45...B LRWXH45	LRWX 55...B LRWXH55	LRWX 75...B LRWXH75
		Standard length L (n)		480 (8) 660 (11) 840 (14) 1020 (17) 1200 (20) 1500 (25)	480 (16) 660 (22) 840 (28) 1020 (34) 1200 (40) 1500 (50)	480 (8) 660 (11) 840 (14)	800 (10) 1040 (13) 1200 (15) 1520 (19) 1920 (24)
Pitch of mounting holes F		60	30	60	80	100	120
E		30	15	30	40	50	60
Standard E or higher dimensions ⁽¹⁾ below		9	9	12	15	18	23
Maximum length ⁽²⁾		1980 (3000)	1980 (3000)	3000 (3960)	2960 (4000)	3000 (4000)	3000 (3960)

Notes ⁽¹⁾ Not applicable to female threads for bellows (supplemental code "J").

⁽²⁾ Track rails with the maximum lengths shown in () can also be manufactured. Consult **IKO** for further information.

⁽³⁾ This indicates the dimension for the half pitch mounting holes specification of track rail.

Remark: If not directed, E dimensions for both ends will be the same within the range of standard E dimensions. To change the dimensions, indicate the specified rail mounting hole positions "B/E" of special specification. For more information, see page III-29.

– Preload Amount · Accuracy Class –

5 Preload amount	Standard : No symbol Light preload : T ₁ Medium preload : T ₂ Heavy preload : T ₃	For details of the preload amount, see Table 3.
6 Accuracy class	High : H Precision : P Super precision : SP Ultra precision : UP	For details of accuracy class, see Table 4.

Table 3 Preload amount

Preload type	Item	Preload symbol	Preload amount N	Operational conditions
Standard	(No symbol)		0 ⁽¹⁾	· Light and precise motion
Light preload	T ₁		0.02 C ₀	· Almost no vibrations · Load is evenly balanced · Light and precise motion
Medium preload	T ₂		0.05 C ₀	· Medium vibration · Medium overhung load
Heavy preload	T ₃		0.08 C ₀	· Operation with vibration and / or shock · Overhanging load applied · Heavy cutting

Note ⁽¹⁾ Indicates zero or minimal amount of preload.
Remark: C₀ indicates the basic static load rating.

Table 4 Tolerance and allowance

unit: mm

Item	Class (classification symbol)			
	High (H)	Precision (P)	Super precision (SP)	Ultra precision (UP)
Dim. H tolerance	±0.040	±0.020	±0.010	±0.008
Dim. N tolerance	±0.050	±0.025	±0.015	±0.010
Dim. variation of H ⁽¹⁾	0.015	0.007	0.005	0.003
Dim. variation of N ⁽¹⁾	0.020	0.010	0.007	0.003
Dim. variation of H for multiple assembled sets	0.035	0.025	—	—
Parallelism in operation of the slide unit C surface to A surface	Based on Fig. 1			
Parallelism in operation of the slide unit D surface to B surface	Based on Fig. 1			

Note ⁽¹⁾ It means the size variation between slide units mounted on the same track rail.

Fig. 1 Parallelism in operation

Lubrication

Lithium-soap base grease with extreme-pressure additive (Alvania EP Grease 2 [SHOWA SHELL SEKIYU K. K.]) is pre-packed in LRWX series.

The LRWX series has grease nipple as indicated in Table 10.

Table 10 Parts for lubrication

Size	Grease nipple type (1)	Applicable supply nozzle type	Bolt size of female threads for piping
25	JIS 1 type	Grease gun available on the market	M6
35			
45			
55	JIS 2 type		PT1/8
75			

Note (1) For specifications of grease nipple, refer to Table 15.2 on page III-22.

Dust Protection

The slide unit of LRWX series are equipped with end seals and under seal as standard for dust protection. However, if large amount of contaminant or dust are floating, or if large particles of foreign substances such as chips or sand may adhere to the track rail, it is recommended to cover the whole unit with bellows or telescope type shield, etc. LRWX series are provided with specific bellows. The bellows are easy to mount and provide excellent dust protection. If

you want to get these units, please refer to III-25 for ordering.

Precaution for Use

Mounting surface, reference mounting surface and typical mounting structure

When mounting the LRWX series, properly align the reference mounting surfaces B and D of the track rail and slide unit with the reference mounting surface of the table and bed and fix them. (See Fig. 3)

Reference mounting surfaces B and D and mounting surfaces A and C are ground precisely. Machining the mounting surface of the table and bed, such as machine or device, to high accuracy and mounting them properly will ensure stable linear motion with high accuracy.

Reference mounting surface of the slide unit is the opposite side of the **IKO** mark. The track rail reference mounting surface is identified by locating the **IKO** mark on the top surface of the track rail. It is the side surface above the mark (in the direction of the arrow). (See Fig. 4)

Fig. 3 Reference mounting surface and typical mounting structure

Fig. 4 Reference mounting surface

Fixing the slide unit

LRWX25...Slide unit of B and LRWXH are also provided with mounting screws in the middle of width direction (see Fig. 5) and have the arrangement to receive the applied load in a good balance. When ordering machines or equipment, consider the arrangement so that the mounting holes in the middle of slide unit can also be used to fix the units, to use the highest performance out of the product.

Table 5 Slide unit middle mounting hole

Shoulder height and corner radius of the reference mounting surface

For the opposite corner of the mating reference mounting, it is recommended to have relieved fillet as indicated in Fig. 6, but you may also use it by setting corner radius R shown in Table 11. Recommended value for the shoulder height on the mating side is indicated in Table 11.

Fig. 6 Corner of the mating reference mounting

Table 11 Shoulder height and corner radius of the reference mounting surface

Size	Shoulder height of slide unit mounting part	Shoulder height of track rail mounting part	Corner radius R (Maximum)
	h_1	h_2	
25	6	4	1
35	8	5.5	1
45	8	6	1
55	10	8	1.5
75	10	8	1.5

unit: mm

Tightening torque for mounting bolts

Typical tightening torque for mounting of the LRWX series to the steel mating member material is indicated in Table 12. When vibration and shock of the machine or device are large, fluctuating load is large, or moment load is applied, fix it by using the torque 1.2 to 1.5 times larger than the value indicated in the table as necessary. If the mating member material is cast iron or aluminum, reduce the tightening torque depending on the strength characteristic of the mating member material.

Table 12 Tightening torque for fixing screw

Bolt size	Tightening torque N · m
	High carbon steel-made screw
M 6×1	13.3
M 8×1.25	32.0
M10×1.5	62.7
M12×1.75	108
M16×2	263
M24×3	882

Remark: The tightening torque is calculated based on strength division 12.9.

Notes (1) Track rail lengths L are shown in Table 2 on page II-199.

(2) The appended track rail mounting bolts are hexagon socket head bolts equivalent to JIS B 1176.

(3) Basic load rating (C), basic static load rating (C_0), static moment rating (T_0 , T_x , and T_y) are values for the direction indicated in the following figure.

The upper values of T_x and T_y are for one slide unit and the lower values are for two slide units in close contact.

(4) The shapes of grease nipple vary by size. For details of the specifications, see Table 10 on page II-203.

Linear Way Module

Linear Way Module

LWLM LWM

LRWM

Points

● Compact module type

Compact linear motion rolling guides consisting of a set of track rail and slide member which forms the smallest unit of linear motion mechanism.

● Models for various usage

Three models are available; LWLM and LWM using the ball for rolling elements, and LRWM using the roller.

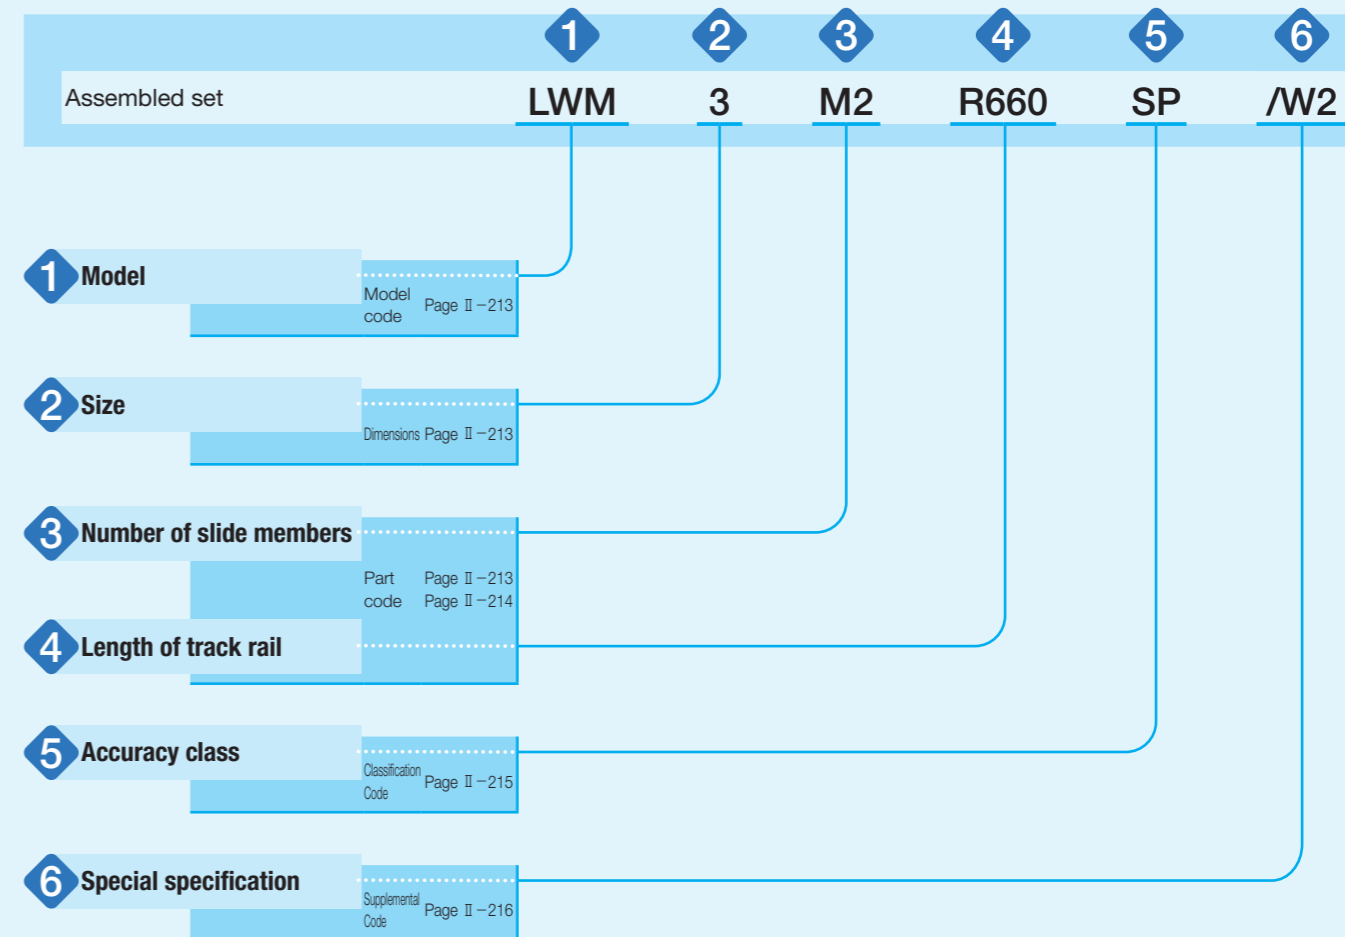

● Stainless steel selections for excellent corrosion resistance

LWLM is made of stainless steel of excellent corrosion resistance. They are suitable for applications where rust prevention oil is not preferred, such as in cleanroom environment.

Identification Number and Specification

Example of an identification number

The specification of Linear Way Module series is indicated by the identification number. Indicate the identification number, consisting of a model code, dimensions, a part code, a classification symbol, and a supplemental code for each specification to apply.

Identification Number and Specification —Model · Size · Number of Slide Member—

1 Model	Linear Way Module	Linear Way LM ⁽¹⁾	: LWLM
		Linear Way M ⁽¹⁾	: LWM
		Linear Roller Way M ⁽¹⁾	: LRWM
For applicable models and sizes, see Table 1.1, 1.2 and 1.3.			
Note ⁽¹⁾ This model has no built-in C-Lube.			
2 Size	7, 9, 11	For applicable models and sizes, see Table 1.1, 1.2 and 1.3.	
	1, 2, 3, 4, 5, 6		
3 Number of slide members		: M○	Indicates the number of slide members assembled on a track rail.

Table 1.1 Model and sizes of LWLM series

Shape	Model	Size		
		7	9	11
	LWLM	○	○	○

Table 1.2 Model and sizes of LWM series

Fig.2 Specified rail mounting hole positions (Supplemental code /E)

Remark: For details of specified rail mounting hole positions (supplemental code /E), see page III-29.

Lubrication

Lithium-soap base grease with extreme-pressure additive (Alvania EP Grease 2 [SHOWA SHELL SEKIYU K. K.]) is pre-packed in Linear Way Module series. Though grease nipples are not appended to Linear Way Module series, oil holes are provided to slide member so that the grease or lubrication oil supplied from machines / devices is directly guided to the rolling elements recirculation route. Lubrication is easily conducted by providing the supply route in the machines / devices as shown in Fig. 3.

Fig. 3 Example of lubrication method

Dust Protection

The slide members of Linear Way Module series are equipped with end seals as standard for dust protection. However, if large amount of contaminant or dust are floating, or if large

particles of foreign substances such as chips or sand may adhere to the track rail, it is recommended to cover the whole unit with bellows or telescope type shield, etc.

Precaution for Use

1 Mounting surface, reference mounting surface and typical mounting structure

When mounting the Linear Way Module series, properly align the reference mounting surfaces B and D of the track rail and slide member with the reference mounting surface of the table and bed and fix them. (See Fig. 4) The reference mounting surfaces B and D and mounting surfaces A and C are precisely ground. Machining the mounting surface of the table and bed, such as machine or device, to high accuracy and mounting them properly will ensure stable linear motion with high accuracy.

Fig. 4 Reference mounting surface and typical mounting structure

2 Fixing the slide member

Typical mounting structure of Linear Way Module series is shown in Fig. 5. As a convenient means to eliminate play or to give preload, preload adjusting screws are often used in linear motion rolling mechanism.

Set the preload adjusting screws at the positions of fixing bolts of slide member and in the middle of the height of slide member, and then press the slide member by tightening the screw.

For mounting the slide member of Linear Way Module LWLM, it is recommended to fix the slide member from the table side, because the allowance for the preload adjustment in the bolt hole of slide member is small. In this case, the bolt hole and the counterbore in the table should be made larger to give the adjustment allowance.

Fig. 5 Mounting by preload adjusting screws

Preload amount varies depending on operational conditions of your machine and device. However, as excessive preload may lead to short life and damage on the raceway, it is typically ideal to adjust to zero clearance or slight preload state.

3 Shoulder height and corner radius of the reference mounting surface

For the opposite corner of the mating reference mounting, it is recommended to have relieved fillet as indicated in Fig. 6. Table 7.1, Table 7.2 and Table 7.3 show recommended shoulder heights and corner radius of the mating reference mounting surfaces.

Fig. 6 Corner of the mating reference mounting

4 Tightening torque for mounting bolts

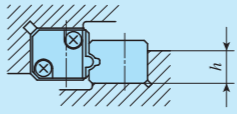

Typical tightening torque for mounting of Linear Way Module series to the steel mating member material is indicated in Table 6. When vibration and shock of the machine or device are large, fluctuating load is large, or moment load is applied, fix it by using the torque 1.2 to 1.5 times larger than the value indicated in the table as necessary. If the mating member material is cast iron or aluminum, reduce the tightening torque depending on the strength characteristic of the mating member material.

Table 6 Tightening torque for fixing screw

Bolt size	Tightening torque N · m	
	High carbon steel-made screw	Stainless steel-made screw
M 2.6×0.45	—	0.7
M 3 ×0.5	1.7	1.1
M 4 ×0.7	4.0	—
M 5 ×0.8	7.9	—
M 6 ×1	13.3	—
M 8 ×1.25	32.0	—
M10 ×1.5	62.7	—
M12 ×1.75	108	—

Remark: The calculation is based on the tightening torque, strength division 12.9 and property division A2-70.

General Explanation

Selection Procedure

Selection of Linear Way and Linear Roller Way should be considered from the most important required matter to details in order. Typical procedure is shown below.

Example of Linear Way and Linear Roller Way selection procedure

Load Rating and Life

Life of linear motion rolling guides

Even in normal operational status, a linear motion rolling guide will reach the end of its life after a certain period of operations. As repeated load is constantly applied onto a raceway and rolling elements of the linear motion rolling guide, this leads to leprous damage (scale-like wear fragments) called fatigue flaking due to rolling contact fatigue of materials, it will be unusable at the end. Total traveling distance before occurrence of this fatigue flaking on a raceway or rolling elements is called the life of linear motion rolling guide.

As the life of linear motion rolling guide may vary depending on material fatigue phenomenon, rating life based on statistic calculation is used.

Rating life

Rating life of linear motion rolling guide refers to the total traveling distance 90% of a group of the same linear motion rolling guide can operate without linear motion rolling guide material damages due to rolling contact fatigue when they are operated individually under the same conditions.

Fig. 1 Direction of load rating

Fig. 2 Direction of static moment rating

Basic dynamic load rating C

Complying with ISO 14728-1

Basic dynamic load rating refers to load with certain direction and size that is logically endurable for rating life of 50×10^3 m when a group of the same linear motion rolling guides is operated individually under the same conditions.

Basic static load rating C_0

Complying with ISO 14728-2

Basic static load rating refers to static load generating the contact stress as shown in Table 1 at the center of contact parts of the rolling elements and a raceway under maximum load, which is the load at the allowable limit for normal rolling motion. Generally, it is used considering static safety factor.

Table 1 Maximum contact stress for each series

Series name	Maximum contact stress
Linear Way	4 200 MPa
Linear Roller Way	4 000 MPa

Static moment rating T_0, T_x, T_y

Static moment rating refers to static moment load generating the contact stress as shown in Table 1 at the center of contact parts of rolling elements and a raceway under the maximum load when the moment load shown in Fig. 2 is loaded, which is the moment load at the allowable limit for normal rolling motion. Generally, it is used considering static safety factor.

Calculating formula of life

The rating life calculation formulas are shown below.

Linear Way

$$L = 50 \left(\frac{C}{P} \right)^3 \dots \dots \dots (1)$$

Linear Roller Way

$$L = 50 \left(\frac{C}{P} \right)^{10/3} \dots \dots \dots (2)$$

where, L : Rating life, 10^3 m
 C : Basic dynamic load rating, N
 P : Dynamic equivalent load, N

Life time can be calculated by applying a stroke length and a number of strokes per minute to the formula below.

$$L_h = \frac{10^6 L}{2Sn_1 \times 60} \dots \dots \dots (3)$$

where, L_h : Rating life in hours, h
 S : Stroke length, mm
 n_1 : Number of strokes per minute, cpm

Load factor

Load applied to a linear motion rolling guide can be larger than theoretical load due to machine vibration or shock. Generally, the applied load is obtained by multiplying it by the load factor indicated in Table 2.

Table 2 Load factor

Operating conditions	f_w
Smooth operation free from shock	1 ~ 1.2
Normal operation	1.2 ~ 1.5
Operation with shock load	1.5 ~ 3

Static safety factor

Generally, basic static load rating and static moment rating is considered as load at the allowable limit for normal rolling motion. However, static safety factor must be considered according to operating conditions and required performance of the linear motion rolling guide.

Static safety factor can be obtained by the following equation and typical values are indicated in Tables 3.1 and 3.2.

Equation (6) is a representative equation for a moment load. Moment load and static moment rating in each direction is applied for the calculation.

$$f_s = \frac{C_0}{P_0} \dots \dots \dots (5)$$

$$f_s = \frac{T_0}{M_0} \dots \dots \dots (6)$$

where, f_s : Static safety factor
 C_0 : Basic static load rating, N
 P_0 : Static equivalent load, N
 T_0 : Static moment rating, N · m
 M_0 : Moment load in each direction, N · m (maximum moment load)

Table 3.1 Static safety factor for Linear Way

Operational conditions	f_s
Operation with vibration and / or shock	3 ~ 5
High operating performance	2 ~ 4
Normal operating conditions	1 ~ 3

Table 3.2 Static safety factor for Linear Roller Way

Operational conditions	f_s
Operation with vibration and / or shock	4 ~ 6
High operating performance	3 ~ 5
Normal operating conditions	2.5 ~ 3

Dynamic equivalent load

When a load is applied in a direction other than that of the basic dynamic load rating or a complex load is applied, the dynamic equivalent load must be calculated to obtain the basic rating life.

Obtain the downward and lateral conversion loads from the loads and moments in various directions.

$$F_{re} = k_r |F_r| + \frac{C_0}{T_0} |M_0| + \frac{C_0}{T_x} |M_x| \dots\dots\dots(7)$$

$$F_{ae} = k_a |F_a| + \frac{C_0}{T_y} |M_y| \dots\dots\dots(8)$$

- where, F_{re} : Downward conversion load, N
- F_{ae} : Lateral conversion load, N
- F_r : Downward load, N
- F_a : Lateral load, N
- M_0 : Moment load in the T_0 direction, N · m
- M_x : Moment load in the T_x direction, N · m
- M_y : Moment load in the T_y direction, N · m
- k_r, k_a : Conversion factors for load direction (See Table 4)
- C_0 : Basic static load rating, N
- T_0 : Static moment rating in the T_0 direction, N · m
- T_x : Static moment rating in the T_x direction, N · m
- T_y : Static moment rating in the T_y direction, N · m

Note ⁽¹⁾ The upper value of k_a columns represents the right direction and the lower value represents the left direction.

Obtain the dynamic equivalent load from the downward and lateral conversion loads.

$$P = XF_{re} + YF_{ae} \dots\dots\dots(9)$$

- where, P : Dynamic equivalent load, N
- X, Y : Dynamic equivalent load factor (See Table 5)
- F_{re} : Downward conversion load, N
- F_{ae} : Lateral conversion load, N

Table 5 Dynamic equivalent load factor

Class	X	Y
$ F_{re} \geq F_{ae} $	1	0.6
$ F_{re} < F_{ae} $	0.6	1

Static equivalent load

When a load is applied in a direction other than that of the basic static load rating or a complex load is applied, the static equivalent load must be calculated to obtain the static safety factor.

$$P_0 = k_{or} |F_r| + k_{oa} |F_a| + \frac{C_0}{T_0} |M_0| + \frac{C_0}{T_x} |M_x| + \frac{C_0}{T_y} |M_y| \dots\dots(10)$$

- where, P_0 : Static equivalent load, N
- F_r : Downward load, N
- F_a : Lateral load, N
- M_0 : Moment load in the T_0 direction, N · m
- M_x : Moment load in the T_x direction, N · m
- M_y : Moment load in the T_y direction, N · m
- k_{or}, k_{oa} : Conversion factors for load direction (See Table 6)
- C_0 : Basic static load rating, N
- T_0 : Static moment rating in the T_0 direction, N · m
- T_x : Static moment rating in the T_x direction, N · m
- T_y : Static moment rating in the T_y direction, N · m

Calculated Load

Examples of calculation for the loads applied to Linear Way and Linear Roller Way that is incorporated in machine / equipment is shown in Table 7.1 to Table 7.6.

Table 7.1 One track rail and one slide unit

Slide unit No.	Load applied on the slide unit				
	Downward load F_r	Lateral load F_a	Moment load in the T_0 direction M_0	Moment load in the T_x direction M_x	Moment load in the T_y direction M_y
1	F_z	F_y	M_r	M_p	M_y

Remark: The moment loads in each direction M_x, M_p, M_y can be obtained by the following equation.

$$M_x = F_y Z + F_z Y$$

$$M_p = F_x (Z - Z_d) + F_z X$$

$$M_y = -F_x (Y - Y_d) + F_y X$$

4	$\frac{F_z}{8} + \frac{M_r}{4L} - \frac{M_p}{2} \frac{\ell}{\ell^2 + \ell'^2}$	$\frac{F_y}{8} - \frac{M_y}{2} \frac{\ell}{\ell^2 + \ell'^2}$
5	$\frac{F_z}{8} - \frac{M_r}{4L} + \frac{M_p}{2} \frac{\ell}{\ell^2 + \ell'^2}$	$\frac{F_y}{8} + \frac{M_y}{2} \frac{\ell}{\ell^2 + \ell'^2}$
6	$\frac{F_z}{8} - \frac{M_r}{4L} + \frac{M_p}{2} \frac{\ell'}{\ell^2 + \ell'^2}$	$\frac{F_y}{8} + \frac{M_y}{2} \frac{\ell'}{\ell^2 + \ell'^2}$
7	$\frac{F_z}{8} - \frac{M_r}{4L} - \frac{M_p}{2} \frac{\ell'}{\ell^2 + \ell'^2}$	$\frac{F_y}{8} - \frac{M_y}{2} \frac{\ell'}{\ell^2 + \ell'^2}$
8	$\frac{F_z}{8} - \frac{M_r}{4L} - \frac{M_p}{2} \frac{\ell}{\ell^2 + \ell'^2}$	$\frac{F_y}{8} - \frac{M_y}{2} \frac{\ell}{\ell^2 + \ell'^2}$

Remark: The moment loads in each direction M_r , M_p , M_y can be obtained by the following equation.

$$M_r = F_y Z + F_z Y$$

$$M_p = F_x (Z - Z_d) + F_z X$$

$$M_y = -F_x (Y - Y_d) + F_z X$$

Mean Equivalent Load for Fluctuating Load

When the load on the Linear Way and Linear Roller Way varies, instead of dynamic equivalent load P , the mean equivalent load P_m is used for calculating formula of life. The mean equivalent load is a load converted to give life equal to that for fluctuating load. It is obtained by the following formula:

$$P_m = \sqrt[p]{\frac{1}{L} \int_0^L P_n^p dL} \dots \dots \dots (11)$$

- where, P_m : Mean equivalent load, N
- L : Total traveling distance, m
- P_n : Fluctuating load, N
- p : Exponent (ball type: 3, roller type: 10/3)

Table. 8 gives calculation examples of the mean equivalent load for typical fluctuating loads.

Table 8 Mean equivalent load for fluctuating load

Example	Mean equivalent load
<p>① Stepwise changing load</p>	$P_m = \sqrt[p]{\frac{1}{L} (P_1^p L_1 + P_2^p L_2 + \dots + P_n^p L_n)}$ <p>where, L_1 : Total traveling distance receiving the load P_1, m L_2 : Total traveling distance receiving the load P_2, m L_n : Total traveling distance receiving the load P_n, m</p>
<p>② Monotonously changing load</p>	$P_m \doteq \frac{1}{3} (2P_{max} + P_{min})$ <p>where, P_{max} : Maximum value of fluctuating load, N P_{min} : Minimum value of fluctuating load, N</p>

Examples of Load and Life Calculation

Example 1

Linear Way Model.....	ME 25 C2 R640 H
Basic dynamic load rating.....	$C = 18100 \text{ N}$
Basic static load rating.....	$C_0 = 21100 \text{ N}$
Applied load.....	$F_{x1} = 1000 \text{ N}$
.....	$F_{y1} = 2000 \text{ N}$
.....	$F_{z1} = 1000 \text{ N}$
Load position.....	$X_1 = 60 \text{ mm}$
.....	$Y_1 = 50 \text{ mm}$
.....	$Z_1 = 83 \text{ mm}$
Table mass.....	$m_1 = 10 \text{ kg}$
Position of the center of gravity of table.....	$X_2 = 0 \text{ mm}$
.....	$Y_2 = 0 \text{ mm}$
.....	$Z_2 = 43 \text{ mm}$

Work mass.....	$m_2 = 10 \text{ kg}$
Position of center of gravity of work.....	$X_3 = 75 \text{ mm}$
.....	$Y_3 = 80 \text{ mm}$
.....	$Z_3 = 68 \text{ mm}$
Number of strokes per minute.....	$n_1 = 5 \text{ cpm}$
Stroke length.....	$S = 100 \text{ mm}$
Distance between slide units.....	$\ell = 100 \text{ mm}$
Distance between the track rails.....	$L = 150 \text{ mm}$
Drive position.....	$Y_d = 150 \text{ mm}$
.....	$Z_d = 10 \text{ mm}$

The life and static safety factor in the case of Example 1 is calculated. Load factor f_w is assumed to be 1.5.

1 Calculation of load on the slide unit

Due to the applied load and the table weight, moment load occurs around each coordinate axis of the Linear Way as shown below.

$$M_r = \Sigma (F_y Z) + \Sigma (F_z Y) = F_{y1} Z_1 + F_{z1} Y_1 + m_1 g Y_2 + m_2 g Y_3$$

$$= 2000 \times 83 + 1000 \times 50 + 10 \times 9.8 \times 0 + 10 \times 9.8 \times 80$$

$$\approx 224000$$

$$M_p = \Sigma \{F_x (Z - Z_d)\} + \Sigma (F_z X) = F_{x1} (Z_1 - Z_d) + F_{z1} X_1 + m_1 g X_2 + m_2 g X_3$$

$$= 1000 \times (83 - 10) + 1000 \times 60 + 10 \times 9.8 \times 0 + 10 \times 9.8 \times 75$$

$$\approx 140000$$

$$M_y = -\Sigma \{F_x (Y - Y_d)\} + \Sigma (F_y X) = -F_{x1} (Y_1 - Y_d) + F_{y1} X_1$$

$$= -1000 \times (50 - 150) + 2000 \times 60 = 220000$$

where, M_r : Moment load in the rolling direction, N · mm
 M_p : Moment load in the pitching direction, N · mm
 M_y : Moment load in the yawing direction, N · mm

The loads applied on each slide unit are calculated according to Table 7.4 on page III-11.

$$F_{r1} = \frac{\Sigma F_z}{4} + \frac{M_r}{2L} + \frac{M_p}{2\ell} = \frac{F_{z1} + m_1 g + m_2 g}{4} + \frac{M_r}{2L} + \frac{M_p}{2\ell}$$

$$= \frac{1000 + 10 \times 9.8 + 10 \times 9.8}{4} + \frac{224000}{2 \times 150} + \frac{140000}{2 \times 100}$$

$$\approx 1750$$

$$F_{r2} = \frac{\Sigma F_z}{4} + \frac{M_r}{2L} - \frac{M_p}{2\ell} = \frac{F_{z1} + m_1 g + m_2 g}{4} + \frac{M_r}{2L} - \frac{M_p}{2\ell} \approx 346$$

$$F_{r3} = \frac{\Sigma F_z}{4} - \frac{M_r}{2L} + \frac{M_p}{2\ell} = \frac{F_{z1} + m_1 g + m_2 g}{4} - \frac{M_r}{2L} + \frac{M_p}{2\ell} \approx 252$$

$$F_{r4} = \frac{\Sigma F_z}{4} - \frac{M_r}{2L} - \frac{M_p}{2\ell} = \frac{F_{z1} + m_1 g + m_2 g}{4} - \frac{M_r}{2L} - \frac{M_p}{2\ell} \approx -1150$$

$$F_{a1} = F_{a3} = \frac{\Sigma F_y}{4} + \frac{M_y}{2\ell} = \frac{F_{y1}}{4} + \frac{M_y}{2\ell}$$

$$= \frac{2000}{4} + \frac{220000}{2 \times 100} = 1600$$

$$F_{a2} = F_{a4} = \frac{\Sigma F_y}{4} - \frac{M_y}{2\ell} = \frac{F_{y1}}{4} - \frac{M_y}{2\ell} = -600$$

2 Calculating of rating life

The upward / downward load and lateral load are converted by formula (7) and (8) on page III-7.

$$F_{re1} = k_r |F_{r1}| = 1 \times 1750 = 1750$$

$$F_{re2} = k_r |F_{r2}| = 1 \times 346 = 346$$

$$F_{re3} = k_r |F_{r3}| = 1 \times 252 = 252$$

$$F_{re4} = k_r |F_{r4}| = 1 \times 1150 = 1150$$

$$F_{ae1} = k_a |F_{a1}| = 1 \times 1600 = 1600$$

$$F_{ae2} = k_a |F_{a2}| = 1 \times 600 = 600$$

$$F_{ae3} = k_a |F_{a3}| = 1 \times 1600 = 1600$$

$$F_{ae4} = k_a |F_{a4}| = 1 \times 600 = 600$$

where, k_r, k_a : Conversion factors for load direction (See Table 4 on page III-7.)

The dynamic equivalent load is calculated by formula (9) on page III-7.

$$P_1 = X |F_{re1}| + Y |F_{ae1}| = 1 \times 1750 + 0.6 \times 1600 = 2710$$

$$P_2 = X |F_{re2}| + Y |F_{ae2}| = 0.6 \times 346 + 1 \times 600 \approx 808$$

$$P_3 = X |F_{re3}| + Y |F_{ae3}| = 0.6 \times 252 + 1 \times 1600 \approx 1750$$

$$P_4 = X |F_{re4}| + Y |F_{ae4}| = 1 \times 1150 + 0.6 \times 600 = 1510$$

The basic rating life of slide unit 1 receiving the largest dynamic equivalent load is calculated. The basic rating life is obtained by the formula (1) given on the page III-6 considering the load factor f_w (see Table 2 on page III-6).

$$L_1 = 50 \left(\frac{C}{f_w P_1} \right)^3 = 50 \times \left(\frac{18100}{1.5 \times 2710} \right)^3 \approx 4410$$

$$L_{h1} = \frac{10^6 L_1}{2S n_1 \times 60} = \frac{10^6 \times 4410}{2 \times 100 \times 5 \times 60} \approx 73500$$

As the result of calculation above, the basic rating life is about 73,500 hours.

3 Calculating of static safety factor

The static equivalent load is calculated from the upward / downward load and lateral load by formula (10) on page III-8.

$$P_{01} = k_{or} |F_{r1}| + k_{oa} |F_{a1}| = 1 \times 1750 + 1 \times 1600 = 3350$$

$$P_{02} = k_{or} |F_{r2}| + k_{oa} |F_{a2}| = 1 \times 346 + 1 \times 600 = 946$$

$$P_{03} = k_{or} |F_{r3}| + k_{oa} |F_{a3}| = 1 \times 252 + 1 \times 1600 = 1852$$

$$P_{04} = k_{or} |F_{r4}| + k_{oa} |F_{a4}| = 1 \times 1150 + 1 \times 600 = 1750$$

where, k_{or}, k_{oa} : Conversion factors for load direction (See Table 6 on page III-8.)

The static safety factor of slide unit 1 receiving the largest static equivalent load is calculated. The static safety factor is calculated by formula (5) on page III-6.

$$f_{s1} = \frac{C_0}{P_{01}} = \frac{21100}{3350} \approx 6.3$$

As the result of calculation above, the static safety factor is about 6.3.

Accuracy

Five classes of accuracy, ordinary, high, precision, super precision, and ultra precision are specified for Linear Way and Linear Roller Way.

The outline of applicable accuracy classes is shown in Table 9. For details, see an explanation of each series.

Table 9 Accuracy classes and series

Series name	Class (classification symbol)	Ordinary (No symbol)	High (H)	Precision (P)	Super precision (SP)	Ultra precision (UP)
C-Lube Linear Way ML Linear Way L		—	○	○	—	—

C-Lube Linear Roller Way Super MX Linear Roller Way Super X		—	○	○	○	○
Linear Roller Way X		—	○	○	○	○
Linear Way Module		—	○	○	○	—

Preload

Objectives of preload

In some cases, the linear motion rolling guide is used with clearance given to the linear motion rolling guide when light motion with small load is required. However, for some applications, it may be used with play in the guiding mechanism removed or with preload to increase rigidity.

Preload is applied to the contact parts of a raceway and rolling elements with internal stress generated in advance. When an external load is applied on the preloaded linear motion rolling guide, shock absorbing with this internal stress makes elastic deformation smaller, and its rigidity is increased. (See Fig. 3)

Preload setting

Preload amount is determined by considering the characteristics of the machines or equipments on which the linear motion rolling guide is mounted and the nature of load acting on the linear motion rolling guide. The standard amount of preload for linear motion rolling guides is, in general, approx. 1/3 of load when the rolling elements are balls (steel balls) and approx. 1/2 of load when they are rollers (cylindrical rollers). If the linear motion rolling guides are required to have very high rigidity to withstand vibration or fluctuating load, a larger preload may be applied. For applicable preload amount, see Table 10. For details, see an explanation of each series.

Precaution for preload selection

Even when high rigidity must be required, excessive preload should be avoided, because it will produce an excessive stress between rolling elements and raceways, and eventually result in short life of linear motion rolling guides. It is important to apply a proper amount of preload, considering the operational conditions. When using with a large preload, contact **IKO**.

Table 10 Series and preload amount

Series name	Preload (preload symbol)	Clearance (T _c)	Clearance (T ₀)	Standard (No symbol)	Light preload (T ₁)	Medium preload (T ₂)	Heavy preload (T ₃)

Fig. 3 Preload and elastic deformation behavior

Friction

Friction of linear motion rolling guide

The static friction (start-up friction) of linear motion rolling guides is much lower than that of conventional plain guides. Also, the difference between static friction and dynamic friction is small, and frictional resistance varies little when velocity changes. These are excellent features of linear motion rolling guides, and account for their ability to reduce power consumption, suppress operating temperature rise, and increase traveling speed.

Since frictional resistance and variation are small, high-speed response characteristics to motion commands and high accuracy positioning can be achieved.

Friction coefficient

The frictional resistance of linear motion rolling guides varies with their model, applied load, velocity and characteristics of lubricant. Generally, lubricant or seals are major factors in determining the frictional resistance in light load or high-speed operation, while the amount of load is the major factor in heavy load or low speed operation. The frictional resistance of linear motion rolling guides depends on various factors, but generally the following formula is used.

$$F = \mu P \dots\dots\dots (11)$$

where, F : Frictional resistance, N
 μ : Dynamic friction coefficient
 P : Applied load, N

For sealed guides, seal resistance is added to the above value, but this resistance varies greatly depending on the interference amount of seal lip and lubrication conditions.

Where the lubrication and mounting condition are correct and the load is moderate, the friction coefficients of Linear Way and Linear Roller Way in operation are within the range shown in Table 11. Generally, friction coefficient is large under small load.

Table 11 Friction coefficient

Series name	Dynamic friction coefficient μ (1)
Linear Way	0.0040~0.0060
Linear Roller Way	0.0020~0.0040

Note (1) These friction coefficients do not include seal.

Lubrication

Objectives of lubrication

The objectives of applying lubricant for linear motion rolling guides is to keep raceways, rolling elements, etc. in a linear motion rolling guide from metal contact, and thereby reduce friction and wear preventing heat generation and seizure. When an adequate oil film is formed at the rolling contact area between the raceways and rolling elements, the contact stress due to load can be reduced. To manage the formation of adequate oil film is important for ensuring the reliability of linear motion rolling mechanism.

Selection of lubricant

To obtain the full performance of linear motion rolling guides, it is necessary to select an appropriate lubricant and lubrication method by considering the model, load and velocity of each linear motion rolling guide. However, as compared with plain guides, lubrication of linear motion rolling guides is much simpler. Only a small amount of lubrication oil is needed and replenishment interval is longer, so maintenance can be greatly reduced. Grease and oil are the two most commonly used lubricants for linear motion rolling guides.

Grease lubrication

For linear motion rolling guides, lithium-soap base grease (Consistency No.2 of JIS) is commonly used. For rolling guides operating under heavy load conditions, grease containing extreme pressure additives is recommended.

In clean and high-vacuum environments, where low dust generating performance and low vaporization characteristics are required, greases containing a synthetic-base oil or a soap other than the lithium-soap base are used. For applications in these environments, due consideration is necessary to select a grease that is suitable for the operating conditions of linear motion rolling guide and achieves satisfactory lubrication performance at the same time.

Table 12 Pre-packed grease list

Series name	Pre-packed grease
C-Lube Linear Way ML Linear Way L	MULTEMP PS No.2 [KYODO YUSHI CO., LTD.]
C-Lube Linear Way ME Linear Way E	Alvania EP Grease 2 [SHOWA SHELL SEKIYU K. K.]
C-Lube Linear Way MH (1) Linear Way H (1) Linear Way F	
C-Lube Linear Way MUL Linear Way U (2)	MULTEMP PS No.2 [KYODO YUSHI CO., LTD.]
C-Lube Linear Roller Way Super MX Linear Roller Way Super X Linear Roller Way X Linear Way Module	Alvania EP Grease 2 [SHOWA SHELL SEKIYU K. K.]

Notes (1) MULTEMP PS No.2 is pre-packed in size 8 to 12 series.
 (2) Alvania EP Grease 2 is pre-packed in size 40 to 130 series.

Grease replenishment interval

The quality of any grease will gradually deteriorate as operating time passes. Therefore, periodic replenishment is necessary. Grease replenishment interval varies depending on the operating conditions. A six month interval is generally recommended, and if the machine operation consists of reciprocating motions with many cycles and long strokes, replenishment every three month is recommended. In addition, linear motion rolling guides in which the lubrication part "C-Lube" is built deliver long-term maintenance free performance. This eliminates the need for lubrication mechanism and workload which used to be necessary for linear motion rolling guides and significantly reduces maintenance cost.

B-8120V	

Remark: The supply nozzles shown in the table can be mounted on the main body of a common grease gun available on the market shown below. If needed, specify the supply nozzle type and place an order to **IKO**.

Piping joint

When applying centralized grease or oil lubrication, detach the grease nipple or plug from the slide unit, and replace them with piping joints, which are prepared for various female threads for piping. Use them after confirming the dimensions of the piping joints and H_3 dimensions in the dimensions table of each models, because the top face of some piping joints is at the same or higher level than the top face of slide unit. Fig. 4.1 and 4.2 and Tables 17.1, 17.2, 17.3, and 17.4 show identification number and dimensions of piping joints. Note that some of them are not applicable for the slide units of special specifications. Piping joints can be mounted on Linear Way and Linear Roller Way prior to delivery upon request. If needed, please contact **IKO**.

Dust Protection

Purpose of dust protection

To obtain the full performance of linear motion rolling guides, it is important to protect them from the intrusion of dust and other harmful foreign substances. Select an effective sealing or dust-protection device to withstand any operating conditions that might be imposed.

Method of dust protection

Linear Way and Linear Roller Way have end seals as a standard specification. In addition, double seals or scrapers are provided as special specifications for improvement in dust protection performance. Also caps and a rail cover sheet to cover the mounting hole of track rail (Fig. 5) and track rail mounting from bottom with no mounting hole on the upper surface (Fig. 6) will further increase the reliability of dust protection.

However, if large amount of contaminant or dust are floating, or if large particles of foreign substances such as chips or sand may adhere to the raceway, complete dust protection becomes difficult. In this case, it is recommended to cover the whole unit with bellows (Fig. 7), telescope type shield, etc. When rail cover sheets or track rails mounting from bottom are needed, please contact **IKO**.

Specific bellows

The specific bellows are manufactured to match the dimensions of Linear Way and Linear Roller Way for easy mounting and excellent dust protection.

If special bellows to be used in an upside-down position or those made of heat-resistant material are needed, please contact **IKO**.

Identification number of bellows

The identification number of bellows consists of a model code, dimensions, and any supplemental codes. Its standard arrangement is shown below.

Calculation of minimum length of bellows

The minimum necessary length of specific bellows is determined, by first calculating the necessary number of accordion pleats as follows.

$$ns = \frac{S}{\ell_{s_{max}} - \ell_{s_{min}}}$$

- where,
- ns : Number of pleats (Raise decimal fractions)
 - S : Stroke length, mm
 - $\ell_{s_{max}}$: Maximum length of one pleat (See Tables 19.1 and 19.2)
 - $\ell_{s_{min}}$: Minimum length of one pleat (See Tables 19.1 and 19.2)

$$L_{min} = ns \times \ell_{s_{min}} + m \times 5 + 10$$

$$L_{max} = S + L_{min}$$

- where,
- L_{min} : Minimum length of bellows, mm
 - L_{max} : Maximum length of bellows, mm
 - m : Number of internal guide plates (See Table 18)

Table 18 Number of internal guide plates for bellows

Model	P dimensions of specific bellows (1) mm		Number of internal guide plates m
	Above	Below	
JEF JRES	—	35	$m = \frac{ns}{7} - 1$
JES JHS JFS JRXS...B JFFS	—	22	$m = \frac{ns}{16}$ when $ns \leq 20$, then $m=0$
	22	25	$m = \frac{ns}{12}$ when $ns \leq 18$, then $m=0$
	25	35	$m = \frac{ns}{8}$

Note (1) For P dimensions, see Table 19.1 and Table 19.2.
Remark: In calculating the number of internal guide plates m , raise the decimal fractions for JEF and JRES and omit the decimal fractions for others.

Intermediate bellows

Since different type of mounting plate is used for mounting bellows between slide units, add supplemental code "/M" onto the identification number when ordering.

Reinforced bellows are also available, which are specially designed for use on long track rails or for lateral mounting. The width A of reinforced bellows is greater than that of standard type bellows. If needed, please contact **IKO**.

Special Specification

For Linear Way and Linear Roller Way, special specification described in pages III-28 through III-34 is available. There is limitation on applicable special specification. For details, see an explanation of each series.

Butt-jointing track rails /A

When the track rail of non-interchangeable specification is longer than the maximum length, two or more track rails should be butted in a linear motion direction. For length and number of track rails to butt, contact **IKO**.

Stainless steel end plate /BS

The standard synthetic resin end plates are replaced with stainless steel end plates. The total length of the slide unit remains unchanged. In addition, for improvement of heat resistance, it is recommended to use "No end seal (supplemental code /N)" together.

Chamfered reference surface /C /CC

Add chamfer to the reference mounting surface of the slide unit and track rail.

- ① /C Add chamfer to the reference mounting surface of the track rail.
- ② /CC Add chamfer to the reference mounting surface of the slide unit and track rail.

Opposite reference surfaces arrangement /D

Reference mounting surface of the track rail should be the opposite of the standard position. Accuracy of *N* dimensions and parallelism during operation remain unchanged.

Specified rail mounting hole positions /E

By specifying E dimensions from the mounting hole at the track rail left end to the left end surface when seen from **IKO** mark of the slide unit, specify the position of track rail mounting hole.
Specify the dimensions (in mm) after "/E".
In addition, E dimension range is limited. For details, please contact **IKO**.
For Linear Way H horizontal mounting type and Linear Way Module series, see an explanation of each series.

Caps for rail mounting holes /F

Dedicated caps for rail mounting holes are included. They close track rail mounting holes to improve sealing property in a motion direction. Contact **IKO** for aluminum caps for rail mounting holes.

Changed pitch of slide unit middle mounting holes /GE

Change the dimension between mounting holes at the slide unit center.

Hybrid C-Lube Linear Way /HB

Change the material of rolling elements built into the slide unit to silicon nitride ceramics.

Half pitch mounting holes for track rail /HP

Set the pitch of track rail mounting holes to a half of the standard F dimension. The specification with bolts for track rail mounting holes are supplied with the required number of bolts.

Inspection sheet /I

Inspection sheet of H dimension, N dimension and parallelism during slide unit operation are appended in each set.

Female threads for bellows (Single unit) /J /JR /JL

For single slide unit or single track rail of the interchangeable specification, fit female threads for bellows.

- ① /J Fit female threads to both ends of the slide unit or track rail.
- ② /JR Fit female threads to a right end surface of the slide unit seen from **IKO** mark of the slide unit.
- ③ /JL Fit female threads to a left end surface of the slide unit seen from **IKO** mark of the slide unit.

Female threads for bellows (Assembled set) /J /JJ /JR /JS /JJS

For assembled set of the interchangeable specification or a non-interchangeable specification product, fit female threads for bellows to the slide unit and track rail.

- ① /J Fit female threads to both ends of the track rail and to slide unit end nearest to both ends of the track rail. (When only one slide unit is used, fit them to both ends of the track rail)
- ② /JJ When two or more slide units are used, fit female threads to both ends of the track rail and to both ends of each slide unit. (When only one slide unit is used, specify "/J")
- ③ /JR Fit female threads to both ends of the track rail.
- ④ /JS Fit female threads to slide unit end nearest to both ends of the track rail. (When only one slide unit is used, they are fitted to both ends of the track rail)
- ⑤ /JJS When two or more slide units are used, fit female threads to both ends of each slide unit. (When only one slide unit is used, specify "/JS")

Black chrome surface treatment /LC /LR /LCR

Acrylate resin coating is applied to improve the rust prevention property after black impregnated chrome surface treatment.

- ① /LC Perform casing treatment.
- ② /LR Perform track rail treatment.
- ③ /LCR Perform casing and track rail treatment.

Special Specification

Fluorine black chrome surface treatment /LFC /LFR /LFCR

Fluorinated resin coating is applied to improve the rust prevention property after black impregnated chrome surface treatment. In addition, this prevent foreign substances from sticking to the surface.

- ① /LFC Perform casing treatment.
- ② /LFR Perform track rail treatment.
- ③ /LFCR Perform casing and track rail treatment.

With track rail mounting bolt /MA

Recommended track rail mounting bolt is included. For bolt size, see the dimension table.

Without track rail mounting bolt /MN

Track rail mounting bolt is not included.

Changed size of mounting holes /M4

Set the M3 track rail mounting hole for ME15 to M4. For combination with track rail mounting bolt (supplemental code "/MA"), specify "/MA4".

No end seal /N

End seals at both ends of the slide unit can be replaced with end pressure plates, which do not come in contact with the track rail, to reduce frictional resistance. No under seal is attached. This specification is not effective for dust protection.

Rail cover plate for track rail /PS

Deliver with the track rail cover plate mounted. Covering the upper surface with U-shape stainless steel thin plate after assembly of the track rail improves the sealing property further. Change the end seal to dedicated one. In addition, see the supplied rail cover plate instruction manual for mounting of rail cover plate.

With C-Lube plate /Q

The C-Lube impregnated with lubricant is attached inside the end seal of the slide unit, so that the interval for reapplying lubricant can be extended.

C-Wiper /RC /RCC

C-Wiper is mounted on the slide unit end to improve dust protection property. In addition, the slide unit with C-Wiper is equipped with inner seal (/UR) and scraper (/Z) together.

- ① /RC Fit C-Wiper to slide unit end nearest to both ends of the track rail. When only one slide unit is used, fit them to both ends of the track rail.
- ② /RCC When two or more slide units are used, fit C-Wiper to both ends of each slide unit.

Special environment seal /RE

The standard end seal and under seal are replaced with seals for special environment that can be used at high temperatures.

Track rail with stopper pins /S

Mount stopper pins to both ends of the track rail as slide unit retainers.

Butt-jointing track rails (Interchangeable specification) /T

Finish the butted parts at both ends so as to set the interchangeable specification track rail in a linear motion direction. Butt the same interchangeable code for track rails. For non-interchangeable specification, specify butt-jointing track rails "/A".

Under seal ⁽¹⁾ /U

The seal is attached to the bottom of the slide unit to prevent foreign substances from entering from underneath.

Note ⁽¹⁾ For C-Lube Linear Way UL and Linear Way U, attach "upper seal".
The seal is attached to the upper end of the slide unit to prevent foreign substances from entering from above.

Inner seal /UR

Attach the inner seal to the inside of the slide unit. Inner seal improves dust protection property of the cylindrical roller circulation part against foreign substances from the upper surface of the track rail.

Double seals (Single unit) /N /NR /NL

Double end seals are mounted to the interchangeable specification slide unit to improve the dust protection property.

- ① /N Apply double seals to both ends of the slide unit.
- ② /NR Apply double seals to a right end surface of the slide unit seen from the **IKO** mark of the slide unit.
- ③ /NL Apply double seals to a left end surface of the slide unit seen from the **IKO** mark of the slide unit.

Double seals (Assembled set) /N /NV

Double end seals are mounted to the interchangeable specification assembled set or non-interchangeable specification product's slide unit to improve the dust protection property.

- ① /N Apply double seals to slide unit end nearest to both ends of the track rail. When only one slide unit is used, fit them to both ends of the track rail.
- ② /NV When two or more slide units are used, apply double seals to both ends of each slide unit.

A group of multiple assembled sets /W

Set the variation of *H* dimensions of the Linear Way and Linear Roller Way of multiple assembled sets on the same flat surface in the standard range.
The variation of *H* dimensions of the multiple assembled sets is the same as the accuracy of one set.
Indicate the number of sets after "/W" based on the number of units when specify.

Specified grease /YCG /YCL /YAF /YBR /YNG

The type of pre-packed grease can be changed by the supplemental code.

- ① /YCG Low Dust-Generation Grease for Clean Environment CG2 is pre-packed.
- ② /YCL Low Dust-Generation Grease for Clean Environment CGL is pre-packed.
- ③ /YAF Anti-Fretting Corrosion Grease AF2 is pre-packed.
- ④ /YBR MOLYCOTE BR2- Plus Grease [Dow Corning] is pre-packed.
- ⑤ /YNG No grease is pre-packed.

Scraper (Single unit) /Z /ZR /ZL

Mount a metal scraper to the interchangeable specification slide unit. The scraper is non-contact type and effectively eliminate large foreign substances adhering to the track rail.

- ① /Z Mount scrapers to both ends of the slide unit.
- ② /ZR Fit a scraper to a right end surface of the slide unit seen from **IKO** mark of the slide unit.
- ③ /ZL Fit a scraper to a left end surface of the slide unit seen from **IKO** mark of the slide unit.

Scraper (Assembled set) /Z /ZZ

Mount a metal scraper to the interchangeable specification assembled set or non-interchangeable specification product's slide unit. The scraper is non-contact type and effectively eliminate large foreign substances adhering to the track rail.

- ① /Z Fit a scraper to slide unit end nearest to both ends of the track rail. When only one slide unit is used, fit them to both ends of the track rail.
- ② /ZZ When two or more slide units are used, fit scrapers to both ends of each slide unit.

Precaution for Use

Operating temperature

The maximum operating temperature for linear motion rolling guide with integrated C-Lube is 80°C. The maximum operating temperature for linear motion rolling guide without integrated C-Lube is 120°C and temperature up to 100°C is allowed for continuous operation. When the temperature exceeds 100°C, contact **IKO**.

When specifying special specification with C-Lube plate (supplemental code "/Q"), utilize it below 80°C.

Multiple slide units used in close proximity

When using multiple slide units in close proximity, greater load may be applied than the calculated value depending on the deviation of slide unit mounting accuracy for the machine or device. In such cases, allowance for greater applied load than the calculated value should be made.

Lateral or upside-down mounting

For lateral or upside-down mounting of the Linear Way E and Linear Way F, specify the special specification (supplemental code "/U") with under seal as necessary to prevent foreign substances from entering into the slide unit.

Operation velocity

Operation velocity limit value of the Linear Way and Linear Roller Way depends on operation conditions such as motion characteristics, applied load, lubrication status, mounting accuracy and environment temperature.

Reference values based on actual performance and experienced values as a reference of maximum velocity under typical operating conditions are indicated in Table 20.

Table 20 Reference maximum velocity

Size	Maximum velocity m/min
35	180
45	120
55	100
65	75

Cleaning and removing fat

Never clean up a linear motion rolling guide with integrated C-Lube with organic solvent or white kerosene with property of removing fat.

Lubrication oil supply point for oil lubrication

If the lubrication oil is supplied by a gravity drip system, enough lubrication oil may not be supplied to ways above the supply point, so lubrication path and supply point must be considered. For such applications, contact **IKO**.

Precaution for Mounting

When mounting multiple assembled sets at the same time

- Interchangeable specification products
For interchangeable specification products, assemble a slide unit and a track rail with the same interchangeable code ("S1" or "S2").
- Non-interchangeable specification products
Do not change the combination of delivered slide unit and track rail.
- Product including multiple assembled sets
For special specification (supplemental code "/W") products with multiple assembled sets, the delivered combination is managed as a group for variation. So do not mix with different group for mounting.

Assembling of slide unit and track rail

When assembling the slide unit on the track rail, correctly fit the grooves of the slide unit and the track rail and move the slide unit softly in parallel direction. Rough handling may result in damaging of seals or dropping of steel balls and cylindrical roller.

For product including a dummy rail as a standard accessory, operation of the slide unit to the track rail can be made easier by using the dummy rail.

Though the dummy rail is included as an accessory of products indicated in Table 22.1 and Table 22.2, it is also available for other products. If these parts are necessary, please contact **IKO**.

Mounting accuracy

Deviation of accuracy of Linear Way and Linear Roller Way mounting surface or deviation of accuracy in mounting may generate large load over the calculated value. Note that such load could affect the life adversely. It enhances the reliability of Linear Way and Linear Roller Way to ensure high machining accuracy and assembly accuracy depending on operational conditions of the track rail and slide unit such as required motion accuracy and rigidity and to consider mounting structure that can maintain the accuracy and performance.

Typical reference values for mounting parallelism between multiple assembled sets used are shown in Table 21.

Table 21 Parallelism between two mounting surfaces unit: μm

Classification	Ordinary (No symbol)	High (H)	Precision (P)	Super precision (SP)	Ultra precision (UP)
Parallelism	30		20	10	6

Shoulder height and corner radius of the reference mounting surface

For the shape of opposite corner of the reference surface, it is recommended to have relieved fillet as indicated in Fig. 8, but you may also use it with providing radius at the corner. For recommended values for the shoulder height and corner radius of the reference mounting surface, see an explanation of each series.

Cleanup of mounting surface

Remove burrs and blemishes by using oil-stone, etc. and wipe off rust prevention oil and dust with clean cloth from mounting surface and reference mounting surface of the machine or device to which the Linear Way or Linear Roller Way are mounted.

Fig. 9 Cleanup of mounting surface

Mounting of caps for rail mounting holes

When mounting the special specification caps for rail mounting holes (supplemental code "/F") on the track rail, use a flat applicator and stamp it by bits until it becomes plane with the track rail upper surface.

Fig. 10 Mounting of caps for rail mounting holes

Tightening torque for mounting bolts

Typical fixing screw tightening torque to mount the Linear Way and Linear Roller Way is indicated in Table 23. When vibration and shock of the machine or device are large, fluctuating load is large, or moment load is applied, fix it by using the torque 1.2 to 1.5 times larger than the value indicated as necessary.

If the mating member material is cast iron or aluminum, reduce the tightening torque depending on the strength characteristic of the mating member material.

For details, see an explanation of each series.

Table 23 Tightening torque for fixing screw

Bolt size	Tightening torque N · m

Mounting surface, reference mounting surface and typical mounting structure

When mounting Linear Way and Linear Roller Way, properly align the reference mounting surface B and D of the track rail and slide unit with the reference mounting surface of the table and bed and fix them. (See Fig. 11)

The reference mounting surfaces B and D and mounting surfaces A and C are precisely ground. Machining the mounting surface of the table and bed, such as machine or device, to high accuracy and mounting them properly will ensure stable linear motion with high accuracy.

Fig. 11 Reference mounting surface and typical mounting structure of Linear Way and Linear Roller Way

Reference mounting surface of the slide unit is the opposite side of the **IKO** mark. The track rail reference mounting surface is identified by locating the **IKO** mark on the top surface of the track rail. It is the side surface above the mark (in the direction of the arrow). (See Fig. 12.)

Fig. 12 Position of reference mounting surface of Linear Way and Linear Roller Way (Representative example)

Load direction and mounting structure

When lateral load, alternate load, or fluctuating load is applied onto the Linear Way or Linear Roller Way, securely fix the ends of slide unit and track rail as indicated in the Fig. 13 and Fig. 14.

When the load is small or operational conditions are not harsh, mounting methods indicated in Fig. 15 and Fig. 16 may be used.

Fig. 13 Mounting example with pressure plate

Fig. 14 Mounting example with tapered jib

Fig. 15 Mounting example with pressure screw

Fig. 16 Mounting example with dowel pin

Mounting Examples

Typical procedures to mount Linear Way and Linear Roller Way are described in Examples 1 to 4 using a Linear Way as a representative case.

Example 1. Typical operation

Fig. 17 Mounting example 1

For typical application without shock, reference mounting surface is prepared on each bed and table on the reference side. The mounting procedures are as follows. (See Fig. 17)

1 Cleanup of mounting surface and reference mounting surface

- Remove burrs and blemishes by using oil-stone, etc. from reference mounting surface and mounting surface of the machine or the device to which Linear Way is mounted and wipe off with clean cloth. (see Fig. 18)
- Wipe off rust prevention oil and dust on the reference mounting surface and the mounting surface of the Linear Way with clean cloth.

Fig. 18 Cleanup of mounting surface

2 Temporary fixing of Linear Way I and II track rails

- Align and temporarily fix them with reference mounting surface of each Linear Way track rail. (See Fig. 19) At this point, ensure that the fixing bolt does not interfere with the mounting hole.
- Fix the Linear Way II track rail to the bed.

Fig. 19 Temporary fixing of track rail

3 Fixing of Linear Way I track rail

- Use small type vise or the like to stick track rail reference mounting surface to the reference mounting surface of the bed and tighten the fixing bolt at the same position. Repeat this method from one end to fix the track rail in order. (See Fig. 20)
- Linear Way II track rail should be left temporarily fixed.

Fig. 20 Fixing of reference side track rail

4 Temporary fixing of Linear Way I and II slide units

- Align the Linear Way with the mounting position of the table and load the table gently.
- Temporarily fix the Linear Way I and II slide units to the table.

5 Fixing of Linear Way I slide unit

- Align the reference mounting surface of the Linear Way I slide unit with the reference mounting surface of the table correctly and fix them.

6 Fixing of Linear Way II slide unit

- Fix one of the Linear Way II slide units in a motion direction correctly and leave the other slide units temporarily fixed. (See Fig. 21)

Fig. 21 Fixing of slide unit

7 Fixing of Linear Way II track rail

- Move the table and fix the Linear Way II track rail ensuring smooth motion status. At this point, tighten each fixing bolt immediately after the fixed slide unit of the Linear Way II passes on each of it. Repeat this method from one end to fix the track rail in order. (See Fig. 22)

Fig. 22 Fixing of driven side track rail

8 Fixing of Linear Way II slide unit

- Fix the rest of the Linear Way II slide units.

Example 2. Operation for linear motion with accuracy and rigidity

Fig. 23 Mounting example 2

If accuracy and rigidity of linear motion are required, prepare two reference mounting surfaces on the bed and one reference mounting surface on the table. The mounting procedures are as follows. (See Fig. 23)

1 Cleanup of mounting surface and reference mounting surface

- Remove burrs and blemishes by using oil-stone, etc. from reference mounting surface and mounting surface of the machine or the device to which Linear Way is mounted and wipe off with clean cloth. (see Fig. 24)
- Wipe off rust prevention oil and dust on the reference mounting surface and the mounting surface of the Linear Way with clean cloth.

Fig. 24 Cleanup of mounting surface

2 Temporary fixing of Linear Way I and II track rails

- Align and temporarily fix them with reference mounting surface of each Linear Way track rail. (See Fig. 25) At this point, ensure that the fixing bolt does not interfere with the mounting hole.

Fig. 25 Temporary fixing of track rail

3 Fixing of Linear Way I and II track rails

- Stick the track rail reference mounting surface of the Linear Way I to the reference mounting surface of the bed with pressure plate or pressure screws and tighten the track rail fixing bolt at the same position. Repeat this method from one end to fix the track rail in order. (See Fig. 26)

Fig. 26 Fixing of track rail

4 Temporary fixing of Linear Way I and II slide units

- Align the slide unit with the mounting position of the table and load the table gently. Temporarily fix the Linear Way I and II slide units to the table.

5 Fixing of Linear Way I slide unit

- Align the reference mounting surface of the Linear Way I slide unit with the reference mounting surface of the table correctly and fix them with pressure plate or pressure screws.

6 Fixing of Linear Way II slide unit

- Move the table ensuring smooth motion status, and fix the Linear Way II slide unit. (See Fig. 27)

Fig. 27 Fixing of slide unit

Example 3 Operation in case the slide unit is fixed separated from the track rail

If it cannot be fixed securely with the table loaded, prepare one reference mounting surface on the bed and two reference mounting surfaces on the table. The mounting procedures are as follows. (See Fig. 28)

1 Cleanup of mounting surface and reference mounting surface

- Remove burrs and blemishes by using oil-stone, etc. from reference mounting surface and mounting surface of the machine or the device to which Linear Way is mounted and wipe off with clean cloth. (see Fig. 29)
- Wipe off rust prevention oil and dust on the reference mounting surface and the mounting surface of the Linear Way with clean cloth.

2 Temporary fixing of Linear Way I and II track rails

- Align and temporarily fix them with reference mounting surface of each Linear Way track rail. (See Fig. 30)
- At this point, ensure that the fixing bolt does not interfere with the mounting hole.

3 Fixing of Linear Way I track rail

- Use small type vise or the like to stick track rail reference mounting surface to the reference mounting surface of the bed and tighten the fixing bolt at the same position. Repeat this method from one end to fix the track rail in order. (See Fig. 31)
- Linear Way II track rail should be left temporarily fixed.

4 Separation of track rail and slide unit

- After checking the combination and positions of Linear Way I and II track rails and slide units, separate each slide unit from the track rail.

5 Fixing of Linear Way I and II slide units

- Align with the reference mounting surface of the Linear Way I and II slide units correctly, and fix them. (See Fig. 32)

6 Setting of track rail and slide unit

- Insert and assemble the slide unit fixed to the table slowly with care while aligning it with the track rail fixed and temporarily fixed to the bed to maintain parallelism.

7 Fixing of Linear Way II track rail

- Move the table and fix the Linear Way II track rail ensuring smooth motion status. At this point, tighten each fixing bolt immediately after the fixed slide unit of the Linear Way II passes on each of it. Repeat this method from one end to fix the track rail in order.

Example 4. Operation of Linear Way Module

For the Linear Way Module, normally 2 sets are used in parallel as indicated in Fig. 33. For the mounting, typically follow the procedure below (see Fig. 33).

1 Cleanup of mounting surface and reference mounting surface

- Remove burrs and blemishes by using oil-stone, etc. from reference mounting surface and mounting surface of the machine or the device to which Linear Way Module is mounted and wipe off with clean cloth (see Fig. 34).
- Wipe off rust prevention oil and dust on the reference mounting surface and the mounting surface of the Linear Way Module with clean cloth.

2 Fixing of track rail

- Align the reference mounting surfaces of track rails I and II with the reference mounting surfaces of the bed correctly, stick them by using small type vise, and tighten the fixing bolts at the same position (see Fig. 35).

3 Fixing the slide member

- Align the reference mounting surface of the slide member I with the reference mounting surface of the table correctly, tighten the fixing bolt to fix them, and temporarily fix the slide member II (see Fig. 36).

4 Setting of table and bed

- Insert and assemble the slide member fixed to the table slowly with care while aligning it with the track rail fixed to the bed to maintain parallelism.

5 Fixing the slide member II

- As indicated in Fig. 37, tighten the preload adjusting screw at the center first and then all the rest preload adjusting screws in order while measuring the clearance by using the dial gauge.
- The position where the dial gauge deflection stops after moving the table to right and left indicates zero preload or slight preload state.
- After preload adjustment, tighten the fixing bolt to fix them.

Mounting of reference side track rail

Mounting methods of reference side track rail are indicated below. Select a method suitable for the specifications of your machine or device.

① Method to use reference mounting surface

· Stick track rail reference mounting surface to the reference mounting surface of the bed by using a pressure plate or small type vise, and tighten the fixing bolt at the same position. Repeat this method from one end to fix the track rail in order.

② Method to use temporary reference surface

· Prepare temporary reference surface around the mounting surface of the bed, temporarily fix the track rail, fix the measurement stand on the upper surface of the slide unit as indicated in Fig. 39, place an indicator onto the temporary reference surface, and fix them from one end of the track rail in order while maintaining straightness.

③ Method with straight-edge

· After temporary fixing of the track rail, apply an indicator to the reference mounting surface of the track rail as indicated in Fig. 40 and fix them from one end of the track rail in order referring to the straight-edge while maintaining straightness.

Mounting of driven side track rail

Mounting methods of driven side track rail are indicated below. Select a method suitable for the specifications of your machine or device.

① Method to use reference mounting surface

· Stick track rail reference mounting surface to the reference mounting surface of the bed by using a pressure plate or small type vise, and tighten the fixing bolt at the same position. Repeat this method from one end to fix the track rail in order.

② Method to follow the reference side track rail

· Correctly mount the reference side track rail and one of the driven slide units in motion direction, temporarily fix the rest of slide units and track rails, and fix them from one end of the driven side track rail in order ensuring smooth motion status.

③ Method with straight-edge

· After temporary fixing of the track rail, apply an indicator to the reference mounting surface of the track rail as indicated in Fig. 40 and fix them from one end of the track rail in order referring to the straight-edge while maintaining straightness.

④ Method to use reference side Linear Way

· Fix a measurement stand onto the upper surface of the reference side slide unit as indicated in Fig. 41, place an indicator onto the reference mounting surface of the driven side track rail, and fix them from one end in order while maintaining parallelism.

Mounting procedures when track rails are butt-jointed

When multiple track rails are butt-jointed, it is necessary to specify special specification butted track rails (non-interchangeable specification, supplemental code "/A") or butt-jointing track rails (interchangeable specification, supplemental code "/T").

Butt-jointing track rails have a butt-jointing mark on the track rail end surface as indicated in Fig. 42. Typical method to butt-joint the track rails is as follows.

① Align the butt-jointing mark on the track rail end surface and temporarily fix it. Since butt-jointing track rails are interchangeable, no butt-jointing position is specified.

② Correctly align the reference mounting surface of the track rail with that of the bed in order. At this point, use a small type vise or the like to stick the reference mounting surfaces of the bed and track rail together so as to eliminate any step at the joint part of the track rail. (See Fig. 43)

IKO Linear Motion Rolling Guide Series,

Configuration of General Catalog

IKO Linear Motion Rolling Guide Series General Catalog Consists of **BLUE** (CAT-1552④E) and

RED (CAT-1555②E), the two volumes.

BLUE

IKO Introduction of Technical Service Site

"IKO Technical Service Site" can be accessed from our home page [IKO](http://www.ikont.co.jp). The site also distributes various tools, etc., to select linear ways/linear roller ways, and please utilize the site for the assistance to select products. Additionally the site also provides CAD data and product catalog of needle series, linear motion rolling guide series and mechatronics series for you to download. Please consider to use for enhancing your design efficiency.

<http://www.ikont.co.jp/eg/>

1. Technical calculations

In the section of linear way/linear roller way load and life calculation, you can have the calculated load and the rating life by entering the use conditions.

Also you can derive the motor torque required for operation and the effective propulsion force during operation in the sections of motor torque calculation and calculation of effective propulsion force of linear motor tables respectively, and output the calculation results in PDF format, as well as save the histories.

2. Selection of Identification Number

By selecting such specification as model code, dimensions, part code, material code, preload symbol, classification symbol, interchangeable code and supplemental code of linear ways/linear roller ways, you can easily specify the identification number used for ordering.

Also you can browse the CAD data of the selected products, calculate the load, and output the selection results in PDF format, as well as save the histories.

3. Downloading CAD data

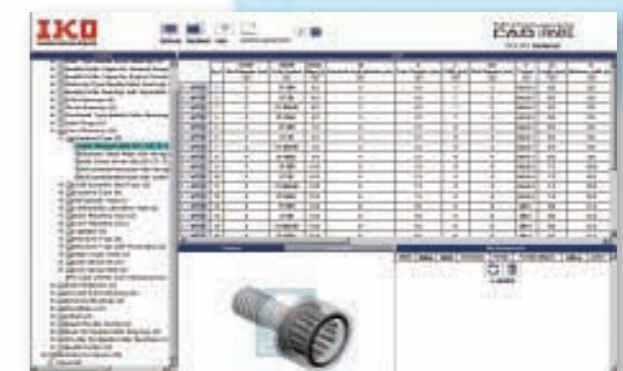

2-dimensional CAD data (DXF file)

There are two types of figures, brief figure and detailed figure. The brief figure shows only the external view lines, and the detailed figure shows the detailed lines. The drawing consists of three drawings: front view, side view and plain view. The scale shows only the original size (1:1), and it does not show dimension lines.

3-dimensional CAD data

It is linked to the mechanical parts CAD library "PART community". Entering the rail dimension and option contents to the detail, you can view the 2D/3D CAD data suitable for the specification for free of charge.

4. Downloading Catalog and Operation Manual

You can download product catalogs of needle series, linear motion rolling guide series and mechatronics series, operation manuals of precision positioning tables and various electrical components in PDF format, as well as support software for precision positioning tables.

For a brochure version of the catalogs, please ask from [IKO](http://www.ikont.co.jp) home page, or contact the nearest branch or sales office.

Oil Minimum

IKO Gentle to The Earth

Nippon Thompson Co., Ltd. is working to develop global environment-friendly products.

It is committed to developing products that make its customers' machinery and equipment more reliable, thereby contributing to preserving the global environment.

This development stance manifests well in the keyword "Oil Minimum."

Our pursuit of Oil Minimum has led to the creation of
IKO's proprietary family of lubricating parts as "C-Lube."

- **IKO** Linear Motion Rolling Guides are manufactured through a control system that alleviates their impact on the global environment to meet the quality requirements of ISO 14001 and ISO 9001.
- The standard products listed in this catalog comply with the specifications of the six hazardous materials mentioned cited in the European RoHS Directive. For information on all other products, please check with **IKO**.

IKO Products Underpin Sustain Technology Leaps

Nippon Thompson Co., Ltd. was the first Japanese manufacturer to develop needle bearings on its own and has since expanded into the arena of linear motion rolling guides (Linear Motion Series and Mechatro Series) on the support of its advanced expertise. The company now offers a vast assortment of ingenious products, including the world's first C-Lube maintenance-free series, to address increasingly diversified customer needs and thus sustain technology leaps.

C-Lube Maintenance-Free Series Products Evolving from the "Oil Minimum" Concept

We have developed lubricating parts impregnated with a large amount of lubricant as C-Lube Series to save the customer's oiling management workload and built them into bearings and linear motion rolling guides. The C-Lube Series not only keeps products maintenance-free for long by giving them an optimal and minimal amount of a lubricant for an extended period of time but also contributes greatly to preserving the global environment.
